He thereupon set out to investigate the Institute of Pacific Relations not knowing especially what he would find. This one event set off a whole series of congressional investigations.

Kohlberg had stumbled on a truth, which rarely happens to any of us. He found that many private organizations with high-sounding names and headed by distinguished men, were infiltrated by Communists, on the administrative level, who formed each organization's policies and determined its goals. Kohlberg took up the fight and never stopped until he died last week.

Naturally Kohlberg was called many ugly names. These he accepted as labels of distinction, but the one that pleased him most was "China Lobby." He proclaimed himself to be the "China Lobby," and challenged all and sundry to investigate him.

A man of means and integrity, he would not have accepted a cent from Chiang Kai-shek or Mao Tse-tung or anyone else to support his opinions. He was a man of strong convictions with enough cash on hand to back them up.

He was really not so much a doctrinaire anti-Communist as he was pro-American. He did not split the fine hairs of definitions; it was sufficient for him that he had wit-

neesed what the Communists did to China and he did not want them to do the same to the United States.

A Jew, he organized the American Jewish League Against Communism. He expected the entire Jewish people to rally to his organization. They did not.

This disappointed Kohlberg but until the moment he died, he continued to finance various organizations and groups in the battle against Soviet Russia. He retired from his business, but he never retired from the cause which he had made his. He was a little David fighting a world of Goliaths and he fought well.

Where does the moral strength come from which transforms a merchant into a battling leader of men in a cause to which many devote their lives?

Kohlberg reminded one of the prophets of old, the men who feared not the mighty, who rejected power, who never considered themselves. No great orator, no powerful writer, no organizer of movements, a man with a delightful sense of humor, whose wit led him into many arid fields, Kohlberg, with a profound sense of justice, developed an enormous and significant following of men and women.

He knew no divided loyalties. The United States was his country; he rejected affinity with any other. If he labored for Nationalist China, it was because he believed that was best for the United States.

And now Alfred Kohlberg is dead. But what Kohlberg started will never die. It caught the fancy of many younger men and women that truth is not a fallacy and courage is not a sin.

[From the Cincinnati Enquirer, Apr. 15, 1960]

ALFRED KOHLBERG AND THE "CHINA LOBBY"

(By Forrest Davis)

WASHINGTON.—As it happened, Alfred Kohlberg's death the other evening at 73, while playing cards in his New York apartment, coincided with a minor public stir over a forthcoming book entitled "The China Lobby in American Politics." The coincidence is pat, because Alfred Kohlberg was substantially from 1944 until his death the moving spirit among those Americans who, viewing the loss of the friendly, allied Republic of China to a Communist imperium thenceforth, stretching unbrokenly across Eurasia from the Baltic to the South China Sea as a catastrophic event, accused certain individuals in Government and out of complicity.

A small, erect, rounded man with a smooth, somewhat cherubic face, and head bald as an egg, Mr. Kohlberg never denied the impeachment first brought against his activities by the New York State Communist Party. Indeed, he once pleaded guilty in a sardonic article written for the French journal of opinion, East and West, under the title, "I Am the China Lobby."

Mr. Kohlberg died on April 8. The book, wherein he figured, was withdrawn from circulation for revision by its publisher, Macmillan, according to public announcement of April 5. The reason for revision was plain. In his preface the author, Prof. Ross Y. Koen, of Humboldt State College, Arcata, Calif., uttered a rather startling slander against the Republic of China on Formosa and, by implication, a number of eminent Americans.

Dr. Koen charged the free Chinese Government of smuggling dope into the United States. I quote from an unrevised copy of the book as distributed to a bookseller:

"Few of the intricate financial dealings, the political contributions or payoffs, or the more intimate personal relations between the various participants (in the 'China Lobby') have been detailed here. The reason is the simple one that the details are either not available or cannot be sufficiently substantiated.

"There is, for example, considerable evidence that a number of Chinese officials have engaged in the illegal smuggling of narcotics into the United States with the full knowledge and connivance of the Chinese Nationalist Government. The evidence indicates that several prominent Americans have participated in these transactions. It indicates further that the narcotics business has been an important factor in the activities and permutations of the China Lobby."

What does this scurrilous language convey to the ordinary layman? First, that those later identified as members of the "China lobby" had been pursuing activities of the utmost nefariousness; secondly, that some or all of those identified had profited from running dope; and thirdly, that the "China lobby" itself had been financed by such profits.

Upon reading this baseless and infamous accusation, unreferred to in the body of Dr. Koen's improbable and polemical work, the Republic of China protested to the publisher with the utmost vigor. The principal figures among the identified members of the lobby conferred with their lawyers. Macmillan faced numerous libel actions.

The enormity of these charges, only matched in irresponsibility by the author's unfailing espousal of the Red Chinese cause and its American apologists, is readily apparent from a partial reading of those identified. They include: Henry and Clare Boothe Luce, the Reverend Msgr. G. Barry O'Toole, former rector of the Catholic University of Peiping; Roscoe Pound, retired dean of the Harvard Law School; the Reverend William R. Johnson, a former missionary to China; Dr. George A. Fitch, a onetime YMCA executive in China and his writer-wife, Geraldine; George Creel, Frederick C. McKee, a Pittsburgh industrialist and philanthropist; David Dubinsky, Gen. William J. Donovan, Methodist Bishop Herbert Welch, Charles A. Edison, former Governor of New Jersey and Secretary of the Navy; Gen. Albert C. Wedemeyer, Adms. Charles M. Cooke, Jr., and Oscar C. Badger, a score of Members of Congress and many other names which space prohibits listing.

These were among the prominent Americans linked by inference to a wholly nonexistent narcotics traffic. Parenthetically, no opium is grown on Formosa. Red China, a principal source of the illegal narcotics trade, contemptuously refuses cooperation with the International Police (Interpol).

As for Alfred Kohlberg, the obituaries failed to do him justice. A lone citizen, he launched a movement that helped awaken his country to its peril from a Communist China. He had no private ax to grind. That I happen to know and, if challenged, can submit evidence. The Koen canard was not a new experience to him.

A Commendable Performance

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. RODINO. Mr. Speaker, in our concern with great issues and massive problems we sometimes neglect to take note of individual examples of courage and dedication to duty which many of our citizens display in the daily course of events. Worthy of attention is such an achievement by a member of the police force of Nutley, N.J., whose constituents I am proud to represent. I point with pride to the recent actions of Sgt. William Dietz, whose alert thinking saved the life of 15-year-old Gloria Klima on April 16. The incident is described in the following editorial in the Nutley Sun:

A FRIEND IN NEED

A 15-year-old girl, Gloria Klima, of 114 Park Avenue, collapsed suddenly as she was crossing the street last Saturday. Recently promoted Sgt. William Dietz and Patrolman Alfred Ciccone responded to the S O S.

Use of oxygen, and then mouth-to-mouth breathing failed to revive Gloria. Sergeant Dietz finally resorted to regular artificial respiration which successfully restored the victim's breathing.

Through the thoughtful and alert actions of Sergeant Dietz, a life was saved. We congratulate Sergeant Dietz for his singular achievement. It gives one a comfortable feeling to know that, should trouble visit our home, our men in blue are ever ready and able to help.

Under the able leadership of Mayor Harry W. Chenoweth, director of public safety, Nutley has developed a very fine and dedicated police and fire department of which we can all be proud.

So, if there are a few among us who sometimes wonder what we receive for our tax dollar, remember Gloria Klima. This time it was the girl next door—tomorrow it could happen to you.

Americanization Day

EXTENSION OF REMARKS

OF

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. DANIELS. Mr. Speaker, last Sunday afternoon, April 24, 1960, I had the privilege of reviewing the Americanization Day parade and of participating in the speaking program sponsored by Captain Clinton E. Fisk Post, No. 132, Veterans of Foreign Wars of the United States, at Jersey City, N.J., in my congressional district, and I was much impressed by the address made to the gathering by my distinguished colleague, Congressman JAMES E. VAN ZANDT, of Pennsylvania.

Under unanimous consent I include in the Appendix of the RECORD the speech of Congressman VAN ZANDT, as I believe my colleagues will find it most inspirational:

ADDRESS BY CONGRESSMAN JAMES E. VAN ZANDT, OF PENNSYLVANIA, AT AMERICANIZATION DAY PROGRAM SPONSORED BY POST NO. 132, VETERANS OF FOREIGN WARS OF THE UNITED STATES, JERSEY CITY, N.J., APRIL 24, 1960

I am greatly honored to have the privilege of representing here today Comander in Chief Louis G. Feldmann, of the Veterans of Foreign Wars of the United States, who is on a world tour as part of our Government's people-to-people program designed to spread international good will. Not alone do I want to bring you greetings from Commander in Chief Feldmann, but also I wish to express his regret in being unable to take part in this program in person.

In asking me to participate in the 29th annual Americanization Day program in his

behalf, Commander Feldmann has made it possible for me to recall with much pleasure my appearance here in the early 1930's when it was my honor to serve the Veterans of Foreign Wars of the United States as commander in chief. By going back to the early 1930's one recognizes that this Americanization Day program at that time was in its infancy for it was only 3 years of age. Back in those days the Communists had taken over May 1 and were staging annual May Day demonstrations in such prominent places as Journal Square here in Jersey City, Union Square in New York City, Rayburn Plaza in Philadelphia, the Commons in Boston, Pershing Square in Los Angeles, and the Plaza in San Francisco. As a matter of fact throughout the Nation communities large and small were confronted with similar Communist demonstrations on May 1.

Speaking frankly, the Reds had the gall of an army mule as they exhibited their ideology by parades and demonstrations. As many of you know, the centers of American towns and cities known as citadels of patriotism were converted on Red May Day into forums of un-American demonstrations.

Typical of America's war veterans and especially the members of the Veterans of Foreign Wars, the Capt. Clinton E. Fisk Post No. 132, of Jersey City, decided to challenge the Communists through a counter demonstration in which they portrayed the ideals of the American way of life. Thus 29 years ago or in 1931 here in Jersey City this Americanization Day program was conceived by a group of patriotic red-blooded Americans. The members of the Captain Clinton E. Fisk Post No. 132 of the Veterans of Foreign Wars are to be commended for accepting the Red challenge 29 years ago and for observing this program in each succeeding year. In fact, these annual programs were not only the forerunners of other communities accepting the Red challenge but served as the inspiration for the Veterans of Foreign Wars nationwide observance of Loyalty Day, May 1. Therefore, I am happy to be back again in Pershing Field in the Garden State of America to assist the membership of Post No. 132 and the citizens of Jersey City in the great effort to focus attention on the ideals that are part and parcel of our American way of life.

Each year my legislative duties, my travels, my discussions with Veterans of Foreign Wars' members, and my attendance at numerous Veterans of Foreign Wars' meetings and conventions, make me more cognizant of the value of the Veterans of Foreign Wars to all America. I need not tell you the VFW is very important to me. My service as your commander in chief brought me great insight and blessed me with lasting associations. Legislation, rehabilitation, youth activities, increased membership, publication of the VFW magazine—to name a few—are of special interest to over a million veterans who are members of our organization. However, one vital phase of our program always impresses me as the "rock" upon which all else is built. That "rock" is Americanism.

The VFW is known and admired for the valor of its members in times of war. But in times of peace the VFW has pioneered in public service performed through patriotic leadership and civic activities. These activities reflect many facets of our American way of life. They deal with the individual and his ideals and his general well-being. Recently a past commander in chief had this to say—and I quote: "Americanism and community service is a double title but actually they mean just one thing—practical application of the VFW charter pledge to foster true patriotism, preserve and defend the United States from all her enemies and to maintain and extend the institutions of American freedom." In this connection, the membership of VFW Post No. 132, Jersey City, has actively supported the brand of patriotism I have just quoted. In fact, the pattern of existence you have followed had its roots in history which dates back to the days when New Jersey was one of the leaders among the Thirteen Colonies which resisted the stamp duties and taxation imposed by the British Parliament.

New Jersey's representatives were active in the sessions of the Continental Congress which led up to the Revolutionary War. This province was a battleground for several of the most important battles of the War for Independence and carried its full share of the burdens of the war.

Some may ask why do I refer to the bloody and ancient days of the American Revolution? In addition they may ask, "Isn't the memberhsip of the Veterans of Foreign Wars the outcome of more recent and modern conflicts and isn't it our purpose to help bring some semblance of peace and security to our time?" We of the VFW can respond to those questions very quickly. We are constantly endeavoring to renew our faith in American ideals. We can appropriately turn to the old quotation which tells us that a man who has no regard for the past, has no concern for the future. We place a high priority on patriotism, Americanism, and the challenges facing all groups of citizens.

However, let us go one or two steps further with this theme. We know that no simple education in American history or in civics alone can defend an individual against anti-American ideals. In other words, no simple education in American history or in civics can defend an individual against the wiles of communism. Simply knowing how this country was developed and the dates the battles were fought, and that the Supreme Court and Congress and the President have different functions which check on each other, is not going to defend anybody. But knowing the whys behind our American institutions, knowing the meaningful version of American economic and political history—which must be taught primarily in schools—these things can first defend the individual and then defend the whole Nation.

A graphic illustration of what I am attempting to say is contained in the situation of the small boy who thinks everyone in the United States acquires a refrigerator, a washing machine, or a car simply by the process of living in the United States. What the small boy does not know is that the refrigerator, the washing machine, and the car must be paid for one way or another, either ready cash or the long process of a payment thereon for the next 36 months. But a lot of small children do not know that. They do not understand it at all. They think the whole system is a reflection of a new philosophy which says, "Get anything you want, get it right away, deny yourself nothing, discipline yourself not at all. Enjoy our wonderful materialistic comforts and rest secure; our country must be invulnerable because we have the best things."

I can summarize this philosophy by quoting a man who has had some thoughts about the subject. Gen. Lemuel C. Shepherd, Jr., who was the Commandant of the Marine Corps at the time of the Korean war, made a comment which referred especially to Communist-captured Americans who were grilled unmercifully during captivity. General Shepherd said this: "In the struggle against communism, war is no longer over when men are forced to give up. The prisoner-of-war camp is only another kind of battlefield. For they must be taught years before to carry on with the only weapons remaining to them; namely, courage and faith, and a sense of personal responsibility."

Ladies and gentlemen, the need to further the cause of our Republic will not be solved by magic formula. The best approach lies in an awakening of the consciousness of the Nation and of the individual—and that means you and me. Frankly, there is a definite need for a sense of conviction and dedication to our principles which exceeds that shown our enemy.

As some of you know, I returned from a tour of Russia's atom-research centers in the latter part of 1957. That will soon be 3 years ago, but the views that I reiterated upon my return continue to be basic and vital to the prestige of the United States. Make no mistake about it, we must face up to Russia and recognize her ability to initiate and conduct worldwide propaganda.

During my visit to Moscow there was constant boasting about the Russian satellite, Sputnik I, which has been successfully launched October 4, 1957. The Soviets hammered at the point that the satellite was produced and launched by a Communist form of government. Furthermore, they asserted it was positive proof that Russia as a form of government excelled the United States. Mark you, Soviet science did not in 1957—and does not in 1960—operate on a 40-hour week. They work around the clock.

Ladies and gentlemen, our present concern with communism results primarily from the aggressive policies of the Soviet Union in the years since the close of World War II. The cold war between two giant powers, the United States and Russia, to control the future of the world creates a moral issue. As long as Americans are loyal, vigilant, and devoted, there is less danger of communism from within. We as a people must be willing to accept the responsibilities of leadership. In the cold war there is no quick or easy solution. Our loyalty demands that the United States should act positively to meet any Communist aggression; we must exploit Communist weaknesses; we must build relations of mutual respect with the rest of the world. Neither should be underestimate the resources of any potential enemy. Neither should we, my friends, underestimate the power of our loyalty to the United States. God forbid that we should ever underestimate the harvest we can reap—for the good of all mankind—if we reglect to practice loyalty ourselves, or teach it to the younger generation.

Ladies and gentlemen, our heritage of liberty and freedom has made Americans truly free. Therefore, let us resolve that as Americans we accept the challenge of communism by dedicating ourselves to that type of patriotism which has established for all Americans a nation of free men and women.

The Nutley Optimist Club

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. RODINO. Mr. Speaker, one of the outstanding civic groups in Nutley, N.J. is the Nutley Optimist Club, whose record of achievement is well known throughout the community. One of its many worthwhile and civic minded programs is its child safety program, which aims at saving lives by educating parents and children alike. The many facets of this invaluable project are described in the following editorial from the Nutley Sun:

CHILD SAFETY IS UP TO YOU

The Nutley Optimist Club is busy conducting its fourth annual child safety program. This is an educational program for both parents and children and is aimed at saving lives.

Over 15,000 children die each year in this country as a result of accidents caused by motor vehicles, burns, falls, poisonings, drownings and firearms. At least five times that number will be permanently crippled. Near-tragic accidents requiring the services of a physician are a common occurrence in Nutley.

Our only hope is a program of protection and education beginning in the home by parents and continued through town by the safety-conscious cooperation of all citizens.

Total protection of the infant must be gradually replaced by the awareness of the child of the many dangers surrounding him and how to avoid and control them. This safety conditioning must coincide with the normal development of locomotion and interest in the environment.

Every accident must be followed by a teaching session. The child and parent must recognize the changing circumstances of the potential accident situation throughout the growing years, from the time the child creeps until he is old enough to drive his father's car.

The Optimist Club has been doing more than its share of trying to educate the public on child safety. One of its major projects is the poison control center maintained at police headquarters. Another is the bicycle safety program conducted throughout town. That is aimed at educating the youth of our town on the do's and don't's of bike riding. It is climaxed with a safety inspection and contest.

In order to support our town safety program every member of the community plays a role. The thoughtful druggist will point out that any drug is a potential poison. The hardware store owner will emphasize the need for safe storage of flammable solvents and insecticides away from children.

The teacher, physician and nurse engage in their own plan of safety education each day.

Let each of us assume the responsibility of teaching our children to learn to protect themselves not only this month, but every month of the year.

Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. KING of Utah. Mr. Speaker, I rise at this time to pay tribute to a great American, Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration. During the campaign months to come, much will be said, and some of it critically, about our general progress in space. I, myself, have expressed concern, and will continue to so express it, over our failure to vigorously pursue our lead over the Russians during those critical years immediately preceding 1957. I am not convinced even today that public opinion has been sufficiently mobilized in support of our overall effort to regain unchallenged leadership in the field of space technology.

I should like to make it clear, however, beyond equivocation, that nothing that I have ever said, or shall say, is in any way intended to reflect upon the outstanding service rendered by Dr. Glennan. During his relatively brief tenure of office the space program has been given an impetus and direction which, from every point of view, is encouraging and praiseworthy. He has pursued his course with unassuming, but remarkable effectiveness. His patriotic motives have imparted a uniquely high quality to all of his actions, and have deepened the respect in which he is held, and the confidence which he enjoys, by all informed Members of the Congress of the United States.

I express my own admiration for his patience in the face of the most trying circumstances. I commend him for inaugurating a 10-year program of planning within his organization, which, apart from the merits of the plans themselves, constitutes a conspicuous contribution to our governmental modus operandi. Among the many features of the Russian system which have threatened our own supremacy, one of the most significant is their ability to plan well in advance, and to hold fast to good plans, once conceived.

Dr. Glennan has seen our own need for planning. We must sustain him in his effort to bring those plans to fruition.

I feel that it would be a mistake to restrict in any way his scope of authority, or to enact legislation which might serve to clog the administrative channels through which his directives have flowed with such effectiveness.

During the campaign months ahead it may well be that I shall be called upon to comment critically upon America's apathy toward our common danger, and about our paucity of leadership in certain vital areas. I am only too glad, however, to make my record clear that no words of mine should be construed as intending to reflect other than the highest confidence in Dr. Glennan. I shall give him my full support, and urge all Americans to do likewise.

Mrs. Carlotta C. Harrison, Civic and Community Leader of Cooperstown, N.Y., Is Honored for Her Fine Work for the Civil Air Patrol

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, prepared by Mr. John Lennebecker of Cooperstown, N.Y., describing a recent ceremony in this village in the center of New York State and in the heart of my congressional district, honoring one of that community's civic leaders, Mrs. Carlotta C. Harrison, for her great work in behalf of the Civil Air Patrol. The Civil Air Patrol is a most important organization, not only for the part it plays in fostering an understanding and interest in aviation and air science on the part of our young people at a time when these skills are most essential to maintaining the kind of secure defense we need against communism as well as stimulating the progress of our national economy, but also for the part that it plays in encouraging our young men and women to devote their energies and time to worthwhile and valuable pursuits rather than yield to some of the temptations which idleness so readily seems to uncover these days. We in my district are very proud of the job that Mrs. Harrison has done in this great work, and I know the article about her recent award will be of great interest to all the Members of this body, and reads as follows:

COOPERSTOWN, N.Y., March 27, 1960.—Mrs. Francis F. Harrison, of Cooperstown, N.Y., was guest of honor at a special luncheon held at the headquarters of Cooperstown Composite Squadron, Civil Air Patrol in the Cooperstown Community House recently.

Presentation of a beautiful hand-embroidered U.S. crest and certificate of recognition was made to Mrs. Harrison by Maj. John DeWitt, U.S. Air Force liaison officer for the New York Wing, Civil Air Patrol. Major DeWitt commended Mrs. Harrison for her generous contributions to the Cooperstown squadron and also told of the mission of the Civil Air Patrol which is made a great deal easier through public-spirited citizens such as Mrs. Harrison. Major DeWitt also expressed the importance of CAP training to the youth of our country and also stated that the fine work of the cadets of the Cooperstown squadron was self-evident in the fine new headquarters made available by the guest of honor.

The whole project for the Cooperstown Composite Squadron had its inception just about 2 years ago. A few short months after the squadron received its charter, they were faced with the common problem of a meeting place and headquarters for its many activities. It was thought by the organizers that an ideal place would be one that provided classroom space, drill area, radio facilities, and administration rooms. Through the efforts of Mrs. Harrison the old Universalist Church in Cooperstown was secured with the idea of not only creating a home for the Cooperstown squadron but promoting community projects and a common meeting place.

The Cooperstown Community House, as it has come to be called, was of solid construction but the interior left a lot to be desired. With a true sense of responsibility the cadets of the squadron faced the long project with determination that was unending. Under the supervision of qualified personnel the cadets of the Cooperstown squadron did well over 90 percent of all the construction work that has made the community house what it is today. The old adage "Jack of all trades" very appropriately describes the work done by the cadet unit of the squadron. Each cadet had his opportunity to try his hand with electrical wiring, plumbing, heating, carpentry, and all other necessary phases of construction. In addition to the fine aviation program of the Civil Air Patrol, the cadets have also had the opportunity of expressing themselves with the many other educational and diversified skills that this project has created.

The cadets now look back upon this undertaking with a deep sense of pride and satisfaction that has materialized through self-

expression and working together. The Community House now has a new hard-oak floor on the second floor which serves as an excellent drill floor for the Cooperstown squadron. This area is also used by the local chapter of the American Red Cross for its bloodmobiles. The Red Cross also has its administration offices on the first floor. Two offices for rental purposes have also been constructed on the first floor and will be occupied in the near future. The radio room is the real pride and joy for the cadets. At present, plans are being formulated to coordinate Red Cross, civil defense, Civil Air Patrol, police, and fire activities through this location. In addition the building has a completely modern kitchen with the facilities to serve well over 150 persons at a banquet or formal dinner. Downstairs is a new modern communications center embodying a high-frequency transceiver, very-high-frequency transceiver, aircraft unicom, AM radio, tape recorder, and complete sound system for use within the Community House, as well as a code oscillator for use in teaching new communicators. Incidentally, all members of this squadron are qualified class III radio-telephone operators with CAP and civil defense.

Mrs. Harrison's presentation came as a result of her extreme generosity in making available the Community House as a place for the community to hold many functions, which were not possible before, and because the future profits of this venture are to be used to educate the youth of this area.

Cooperstown community was an idea born in the mind of Tecwyn O. Williams, its present manager, brought to fruition through the generosity of Mrs. Harrison, and made a reality through the efforts of the cadet members of the Civil Air Patrol. It has appreciably stemmed the tide of delinquency in those who have participated, and, because of the association with adult members of the community who are dedicated to youth activities, has made a fantastic change in the academic standings of the cadets who have participated in the work.

In addition to Mrs. Harrison's presentation three cadets were given recognition of having passed all the necessary requirements of the Civil Air Patrol certificate of proficiency and promoted to the grades indicated:

Cadet 1st Lt. Robert Sinniger, Otego, N.Y. (our squadron candidate for the Air Force jet orientation course for 1960, and an alternate to the Air Force Academy for 1960).

Cadet 2d Lt. Howard C. Sherman, Cooperstown, N.Y. (our squadron candidate for the international cadet exchange program for 1960).

Cadet 2d Lt. John W. Sanford III, Cooperstown, N.Y.

Each of these cadets has shown amazing aptitude in academic fields within and without Civil Air Patrol. In the short period of 2 years we have placed two alternates to the Air Force Academy from three who have taken the entrance examinations. The third is being given the opportunity for the Merchant Marine Academy and during 1960 we will have one additional cadet taking the entrance examination. He has already won a full New York State regents scholarship. In 1961 there will be an additional three who will compete for the Academy among those now enrolled as cadets in the squadron.

In addition to their actual school curriculum they have added many aviation and space-age subjects and the involvement in many and varied crafts. The result has been, almost without exception, an increase in their school marks, high scores in the examination material in aviation subjects, and an ever-improving manner in the handiwork they have undertaken.

To those who have been privileged to work with them has come a great satisfaction and a challenge to continue a job which is never done. As long as there are children who follow in the footsteps of those of whom we speak, there is an ever-present need of mature adult participation in their programs.

Salaries for Postal Employees Should Be Raised

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. FLYNN. Mr. Speaker, the Federal employees, and in particular postal employees, are complaining bitterly about the failure of the U.S. Government to keep their pay schedule on a par with the cost-of-living index. Postal employees are a dedicated group. They are men who have given up the chance of larger earnings for the security that goes with Federal employment. They cannot strike. They cannot even bargain collectively. They are at the mercy of a government that should be dedicated to fair and equitable treatment of its employees. The Government, however, is taking advantage of the employees and their inability to bargain collectively or to strike, and is failing to pay the postal workers a rate that is commensurate with similar employees in municipal and private employment.

Starting in 1952 the wage rates of policemen and firemen throughout the country have gone consistently upward. The increases for postal workers has failed to keep pace with increases to firemen and policemen, and today many a postal employee's family finds that the annual salary of the breadwinner of the family falls several hundred dollars short of paying the normal costs of supporting a family. This group was shocked to find that the President did not provide additional funds for a pay increase in his budget message, or ask for an increase in the state of the Union message. Instead, double talk was used and it was suggested that a study be made of Federal wage rates. It reminds one of Nero playing the fiddle while Rome burns. This callous disregard of the immediate needs of the postal employees for a fair and adequate raise in pay cannot be understood by the postal employees or their families, or justified by the Government. It appears that a fair and adequate wage rate is sacrificed to the desire of the administration for a surplus in the budget. We all want a surplus in the budget, but not at the expense of being unfair to postal employees or to other Federal employees. It has been said that we cannot afford an adequate military defense, that we cannot afford to keep even with Russia in the missile race, that we cannot afford the money necessary to protect the health of our people through initiation of an adequate water pollution program, that we cannot afford to spend money on public works to maintain our physical plant; such as preventing flood control on the rivers of Indiana where millions of dollars in damage is caused through floods every spring, that we cannot afford housing programs or the expenditure of a reasonable amount of money for slum clearance and for urban renewal. To the above must now be added that we cannot afford to pay our own postal employees a fair day of pay for a fair day of work.

We can, however, in the thinking of the administration, afford passage of the vault cash bill, to raise the interest rate for the benefit of the bankers at a cost to the Federal Government and private enterprise of approximately $40 billion a year. We can afford to spend approximately $4 billion a year on foreign aid.

Do you not think that our Nation can afford to treat its Federal employees and, in particular the postal employees, in a just manner insofar as their wages are concerned?

The Farmer Deserves Our Consideration and Support

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. REES of Kansas. Mr. Speaker, I believe Members of the House and Senate, especially those concerned with agricultural problems, will be interested in reading a short editorial that appeared in a recent issue of the Topeka (Kans.) Daily Capital. It is captioned "Grassroots Editors See 1960 as a Good Farm Year":

Many informed persons believe we are doing the Nation's farmers a disservice when we continue to parrot gloomy views about the farm problem.

The current year is not shaping up as the best farmers have ever had, but neither is it likely to be a bad one. That is the consensus of leading farm editors in every section of the United States.

A survey of their opinion discloses general optimism and favorable prospects for a good farm income. Of particular interest here are the findings of our own farm press. The Kansas Farmer's editor, Ray Gilkeson, cites excellent soil moisture and prospective big wheat yields, and the generally superior outlook for all crops in Kansas. The actual livestock count shows an 11½ percent cut in sow numbers, which in turn seems to indicate a spring pig crop likely to be no larger than 1958, which was one of the most profitable hog years farmers have ever known.

Milk production, he says, is another bright spot. A slight cut in milk cow numbers is balanced by heavier per cow production which increases in about the same proportion as the population grows. Egg prices are expected to be better than last year, and beef cattle prices are likely to go up after midsummer marketing.

A farm editor in a neighboring State estimates that farm income for 1960 will be better than 1959, although not quite so high as in 1958. The heavy moisture, he feels, is assurance of a good grass crop, which is vital to the livestock industry.

These heartening opinions are echoed by the editors in all of the Midwestern States,

and serve to discount the calamity howlers who lack faith in the ability of the farmers to prosper under any but ideal conditions.

It is, of course, true that farm income has dropped some at the same time that farm costs have increased. But let's not sell the farmer short. Let's give him credit for the ability to weather some adversity.

Viewed as a part of the whole of our society, the farmer is far better off than some of us, and suffers little by comparison with anyone. He has a large investment in his farm, which is not likely to depreciate. He has more independence than any employee of business. He is well-fed, well-educated, well-clothed, well-informed, and engaged in a pursuit that is vital to the Nation.

He is deserving of consideration and understanding, but he is not facing any immediate economic debacle. To say otherwise is a slander upon his resourcefulness and industry.

Need for Reappointment of Federal Power Commissioner William R. Connole

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. DADDARIO. Mr. Speaker, I was disturbed some time ago when I heard unofficially that the White House was reportedly cold to the reappointment of Federal Power Commissioner William R. Connole. Mr. Connole, a young and vigorous specialist in utility regulation, was appointed to the Commission in 1955 from West Hartford, Conn., in my district, and is due to complete his term this year.

I have been aware of Mr. Connole's able work as counsel to the Connecticut Public Utilities Commission, and I have followed his career in Washington with interest. I believe he has served the public well and he has carried out his duties with a dedicated sense of the national interest.

It is my understanding that the White House supposedly advised a Member of the other body in January that it was not intended that Mr. Connole's name would be submitted for reappointment. It has become known more widely in recent weeks, and a number of responsible organizations have spoken out in his behalf. I would like to submit for publication at the conclusion of these remarks an editorial from the New York Times of today which is a representative statement of the facts in his case.

I want to call attention in particular to this sentence from the editorial:

If the rumored appointments to Mr. Connole's seat and another Power Commission vacancy are made, the Commission will have not a single member from the populous urban gas-consuming areas east of the Mississippi.

The Federal Power Commission has great authority with respect to the rules and regulations, as well as to rates, made concerning the electric power and natural gas industries. These are matters of concern not only to the rich oil and gas producing areas, but to the consuming areas and the rest of the country as well.

On March 23, the six chairmen of public utilities or public service regulating agencies in New England addressed a letter to President Eisenhower supporting Mr. Connole and urging his reappointment. I concur fully in the belief of these men that Mr. Connole, on his record, has always been independent in thought and deed and is a particular credit to the regulatory field at a time when it is being severely attacked.

I believe the argument set forth by these men, who know the work of the Commission intimately, is most persuasive, and deserves reprinting here:

DEAR PRESIDENT EISENHOWER: A matter of the highest concern to the New England Conference of Public Utility Commissioners of the six New England States who regulate all types of utilities in New England has come to our attention; namely, the possible appointment of William R. Connole as a member of the Federal Power Commission. Naturally, coming from New England where he previously served as counsel for the Connecticut Public Utilities Commission, we have followed his career on the Federal Power Commission very closely. It is true that we are proud of him and consider him to be by far the most preeminently qualified person in New England in the field of regulation. However, our concern as to his possible reappointment arises out of concern for the consumers of this Nation and our very vital concern in the success of regulation in our modern economic society.

Mr. Connole has shown during his term the ability to grasp and isolate complex regulatory problems and relate them to the consumer whose interest he is dutybound to consider. Forthright and vigorous stands such as Mr. Connole has taken does more than anything else to give the Federal Power Commission stature in the eyes of the public. In our opinion, Mr. Connole has always been independent in thought and deed and is a particular credit to the regulatory field at a time when it is being severely criticized.

To achieve success in the regulatory field and success has to be achieved if we are to avoid the blandishments of the Socialists whose solution is Government ownership of all utilities, we must appoint strong, stanch individualists who can resist the advances of interested parties. Had we more men such as Mr. Connole, the need and necessity of statutory action presently pending before Congress would disappear.

Mr. Connole is extremely well qualified in a very technical field. For the Nation's sake, it is highly important that it have the benefit of the expertise acquired by him over the next few years. Fortune magazine in its September 1959, issue, describes Mr. Connole as "keenest of the Commissioners." Recent events and history itself teaches us the tremendous pressures that can be exerted on Commissioners. When a possible nominee possesses the expertise, the integrity and the self-confidence to resist intimidation, surely he deserves a chance to serve a new term if he so desires. Unlike Mr. Hector, who chose to resign and criticize from afar, Mr. Connole is willing to continue to serve and attempt to work out the regulatory problems which have arisen. As those of us in regulation know, this entails a certain measure of responsibility and a vigorous regulator, if he fulfills his responsibility, is often the target of personal abuse. It is men in the traditional New England sense who will provide the answer to present attacks on our regulatory system.

In conclusion, I, as chairman of the New England Conference of Public Utilities Commissioners, speaking for myself and for the several commissioners, as instructed, unanimously wish to urge you to reappoint William R. Connole as a member of the Federal Power Commission.

The above endorsement comes from Republicans, Democrats, and Independents alike and I, personally as a Republican, urge his appointment since I have the utmost confidence in him and feel that his appointment would reflect great credit to the Republican Party.

The letter is signed by Charles R. Ross, chairman of the conference and of the Vermont Public Service Commission. Members of the conference are Frederick N. Allen of Maine; Harold K. Davison, of New Hampshire; Francis X. Lang, of Massachusetts; George W. Michael, of Rhode Island; and Eugene S. Loughlin, of Connecticut, as well as Mr. Ross.

I also include at the end of these remarks a letter I received today from Mayor Richardson Dilworth, of Philadelphia, as secretary of the U.S. mayors' committee on natural gas legislation. This letter also endorses Mr. Connole's record.

With this support, and with the compelling reasons for reappointment, I find it hard to understand why the administration has let it be known that it may not reappoint Mr. Connole. I believe it is a mistake. I hope strongly that the administration will reconsider. I have no political interest in this appointment. Mr. Connole, when he was named, was an independent, and met the qualifications that he represent other than the majority faction on the panel. It seems to me that he has spoken and argued well for all the people in his tenure on the commission.

I think, in view of Mr. Connole's record as a defender of the consumer, of the little man, during his time on the commission, that all the people have a right to be disappointed if the White House does not reconsider.

The article and letter follow:

CONNOLE OF THE FPC

It is no secret that President Eisenhower's appointments to the Federal regulatory agencies have sometimes been weak or careless. Some agencies in recent years have seemed reluctant to regulate in the public interest.

The Federal Power Commission is hardly immune from this criticism. During the last 5 years the one member of the Power Commission who has consistently sought to impose effective regulation on natural gas rates has been William R. Connole of Connecticut. His dissent was vindicated in 1954 by a unanimous Supreme Court in a case in which Justice Tom C. Clark reprimanded the Commission majority.

It now appears that Mr. Connole will be denied reappointment when his term expires on June 22. No reason is given. Mr. Connole has admitted a private visit by a litigant's attorney, Thomas G. Corcoran, but says the meeting was innocent; he will be questioned at a congressional hearing May 2. But in any case this could not have been the reason for failing to reappoint him, since the reported White House decision came before the Corcoran matter was disclosed.

If the rumored appointments to Mr. Connole's seat and another Power Commission vacancy are made, the Commission will have not a single member from the populous urban gas-consuming areas east of the Mississippi. Of course Mr. Connole is not indispensable; there doubtless are other strong-minded men with utility regulation experience. But

dropping the one power Commissioner who has fought for meaningful regulation is a poor way to inspire effective performance at the FPC or any other Federal agency. If Mr. Connole explains satisfactorily the one possible cloud on his record, the meeting with Mr. Corcoran, the President should promptly reappoint him.

U.S. MAYORS' COMMITTEE
ON NATURAL GAS LEGISLATION,
Philadelphia, Pa., April 26, 1960.

DEAR FRIEND: I am certain that you have been reading about alleged improper actions on the part of members of the Federal Power Commission. The disclosure of closed door sessions with industry representatives, entertainment, and free airplane rides make headlines and Commissioners can rightly be criticized for the suspect actions. Nevertheless, this publicity totally misses the point, as to which the Commission can most seriously be criticized, that is, its total failure to regulate. Prices have gone up and up since the famous Phillips decision of 1945 and your constituents are faced with ever-increasing charges, but in these 6 years, the Commission has not rendered any basic decisions by which the rules of the game can be applied and prices held down. The wellhead price of natural gas has risen 56.0 percent since 1954 while all commodity prices at wholesale have risen 8.3 percent. Despite the fact that the law directs the FPC to regulate the price of gas in the consumers' interest, gas prices have gone up almost seven times as fast as the price of the average commodity.

There is one heroic exception on the five-man Commission, to the do-nothing pattern, and that is FPC Commissioner William R. Connole, of Connecticut, a political independent, and the only Commissioner from east of the Mississippi where most of the gas is consumed. He alone in the Commission has held out for effective regulation—and reports current in Washington are that the President will not reappoint Connole this June, when his term expires.

As representatives of the natural gas consumer, we have communicated with the President telling him of our support for Mr. Connole's reappointment. We hope that the President will reappoint Mr. Connole. But if another's name is sent to the Senate, we must protest the dropping of this able Commissioner. No matter how exceptional may be his suggested successor, as a newcomer, he cannot be one-tenth as effective in the post as would Mr. Connole, with his 5 years' experience in this complicated fight for consumers' rights. We from the areas of great gas consumption must also register our vigorous opposition to the dropping of the only FPC Commissioner from a major consuming State.

Very truly yours,
RICHARDSON DILWORTH,
Mayor of Philadelphia, Secretary, U.S. Mayors' Committee for Natural Gas Legislation.

Red Bloc Softens Tone of Its Berlin Demands

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. COHELAN. Mr. Speaker, in the following article Washington Post Staff Reporter Murrey Marder reports on recent Communist East German talk about the possibility of an interim agreement on West Berlin resulting from the May 16 summit conference in Paris. The interesting point which I believe important to our continuing attempts to understand the situation is Mr. Marder's report that, while this may be nothing more than a shift of tactics, it may also be taken to mean that "the West Berlin compromise under discussion at Geneva last year came close to the ultimate price the Communists can exact."

Mr. Marder's article follows:

RED BLOC SOFTENS TONE OF ITS BERLIN DEMANDS

(By Murrey Marder)

A general switch by the Soviet bloc to a "softer" phrasing of demands on Berlin, as a prelude to next month's summit conference, is now unfolding, Allied diplomats here believe.

The prime example was the publication on Sunday of East German proposals for an interim agreement on West Berlin "to alleviate the situation."

American officials who examined published versions of the plan yesterday concluded that it appeared to add nothing to the position taken by the Soviet Union in last summer's Geneva Conference of Foreign Ministers. Spokesmen for West Berlin's Senate called the offer completely unacceptable.

However, the potentially significant fact is that the Communist East Germans—traditionally, the roughest, toughest talkers—now appear in the unfamiliar role of compromisers.

ONCE SULKING SKEPTICS

When Soviet diplomats in Geneva last year were deeply involved with the West in a possible compromise, the East Germans cast themselves in the role of sulking skeptics. Their propaganda position was that anything short of the original Soviet demand for outright termination of Western occupation rights in Communist encircled West Berlin was unjust and unnecessary.

For East German Communist Chief Walter Ulbricht to write an open letter to West German workers advocating compromise represents at least a major shift in tactics.

Ulbricht's plan carries all the earmarks of careful coordination with the Kremlin. The Soviet Communist Party newspaper, Pravda, in effect, telegraphed his move 3 days earlier by expressing confidence that a partial and temporary agreement on West Berlin could be reached at the May 16 summit conference in Paris. Probably the next move in the relay will be for the Soviet press, in turn, to endorse Ulbricht's move.

There are various diplomatic interpretations here of what this maneuvering means.

It could be just a change of tactics for the sake of change—often a Soviet-bloc quirk. Soviet Premier Nikita S. Khrushchev and lesser lights have just gone through a new round of warnings that the Soviet Union will sign a separate peace treaty with East Germany, cutting off Allied access to West Berlin, if no agreement is reached on the fate of that prewar German capital.

HOME-CONSUMPTION MOVE?

This might, however, be a conclusion that the West Berlin compromise under discussion at Geneva last year came close to the ultimate price the Communists can exact. If Khrushchev needs to produce some showing on the Berlin issue, the present moves could be preparations for home adjustment, another round of compromise negotiations at a Foreign Ministers conference following the summit talks.

Khrushchev and Ulbricht may only be playing on the nerves of West German Chancellor Konrad Adenauer—a favorite sport for them. Knowing that Adenauer is fearful that the West, at the summit, may be drawn into new concessions on West Berlin, the Soviet bloc might be simply attempting a new approach to try to divide the West.

What Ulbricht, as secretary of the East German Communist Party, has proposed is imprecise enough either to embrace all the difficulties of the last compromise round, or to pave the way to agreement.

The East German proposal, as an alternative to turning West Berlin into a demilitarized free city, calls for: preventing the use of Berlin as a base for sabotage, subversion, and other hostile activities aimed at the Soviet bloc; a gradual reduction of military forces and the step-by-step abolition of the allied occupation status; banning nuclear arms or rockets in West Berlin.

OPPOSE PIECEMEAL SURRENDER

State Department officials point out that the United States, Britain, France, and West Germany oppose anything that represents a piecemeal surrender of occupation rights. The West at Geneva did propose a curb on any hostile acts—but in all Berlin, not just West Berlin.

A freeze on the 11,000-man American-British-French garrisons in the city was also offered, plus possible reduction of these troops. The West also readily agreed to forego stationing nuclear or rocket weapons.

In return, the West asked guarantees for continuing western rights in the city, and access to it, as part of a 5-year stopgap agreement. But the Allies insisted that at the end of the agreement, the West must be assured its rights would be unimpaired. This was a key assurance that the Soviets refused to state. Giving it could open the way to compromise.

"Jobs for the Handicapped—Passports to Dignity"—Essay by Kathy Unser

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, I am very proud that a student from my district in Wisconsin has won fourth place in the annual essay contest sponsored by the Wisconsin Governor's committee on the employment of the physically handicapped. She is Kathy Unser, who attends Regis High School in Eau Claire, Wis.

Under leave to extend my remarks, I would like to include Kathy's inspirational essay in the RECORD:

JOBS FOR THE HANDICAPED—PASSPORTS TO DIGNITY

(By Kathy Unser, Regis High School, Eau Claire, Wis.)

I couldn't imagine what my birthday and all the holidays would be like without Uncle Ben. He was the Santa Claus of all seasons, bringing cheer into the dullest and dreariest of days.

In the hearts of all those who knew him, there was always a special place for Uncle Ben. I guess I loved him the most—not because he gave me presents or called me his favorite "kitten," but because, to me, he was Abe Lincoln, Roy Rogers, and Prince Charming—all wrapped up in one big package.

I often laughed at the surprise which registered on strangers' faces when they first were told of my uncle's blindness. Why many times I myself would forget that he lived in a world of total darkness.

Uncle Ben was amazing. He could detect differences in cloth by feeling the texture; he recognized people by their footsteps; and best of all, Uncle Ben made people unaware of his disability.

But those days are gone. Uncle Ben is gone. All I have left of him is memories and a little diary which mother gave me as a keepsake. That diary holds the key to Uncle Ben's happiness and the dexterity with which he learned to live without seeing.

In paging through that booklet, I was anxious to read the page dated April 11, 1941—that fateful day when the doctor's prophecy became manifest in Uncle Ben. Total blindness.

There it was on page 12—all the information which was necessary to understand what happens inside a man who has become handicapped for the rest of his life.

April 11: "I may as well be dead. All the beauty in life has been drained out and my hopes and dreams for the future are shattered. Oh, God, help me."

These words I found typified the following weeks in Uncle Ben's life. Through the united efforts of the doctor and Uncle Ben's family, however, he did finally find heart and proceeded on the road to rehabilitation.

Although Uncle Ben was determined to lead as normal a life as possible for a person impaired in such a way, his struggle was difficult. His family—parents, a sister, and a brother—with whom he lived, pitied him to a great extent because of his accident. Love and pity combined, constitute a force which the normal physically handicapped person will grow to detest, unless that force can be controlled.

By losing an arm or a leg, or by losing the ability to hear or see, the person concerned also loses a portion of his dignity as a man. Pity only pushes the acknowledgment of this loss deeper into the soul of the disabled individual. Unconsciously, Uncle Ben's family was rubbing salt into the already tender and sensitive wound. By helping him with the little actions that every one of us take for granted—such as going down stairs, pouring coffee, or even lighting a cigarette—they allowed the inevitable despair to envelop and control Uncle Ben.

November 20: "What a life. I look forward to sleep every night as an escape from a world in which I don't belong. Yet, I dread sleep, too, for I know I will only wake up to another monotonous and discouraging day."

Yes, Uncle Ben found no understanding from those dearest to him, and rehabilitation had slowly turned to a downward grade.

In his desperation to regain the necessary self-respect and the lost dignity of his person, Uncle Ben turned finally to his clergyman.

March 29: "Father Sulman asked the impossible of me—to get a job. I laughed and laughed even harder when he told me severely to 'cut the self-pity and do something with my life.' All I can say is that he has eyes which see."

But, apparently Uncle Ben began to realize that blindness was a poor excuse for laziness and that he had a choice to make. He could either put his talents to work and make use of what he still had, or he could sit at home with nothing to occupy his time and energy, but thoughts of his misfortune.

The following week, he set out—evidently in high spirits—to search for employment. At first it seemed that he did it only for a joke, but later he began to take the idea seriously.

April 4: "It was good to talk to people again. Why, maybe with a little luck, I might get hired by the Auto-Lite Corp."

Lady Luck came through for Uncle Ben, and the following week he left for his first day of work in 13 months. From that day on, an almost miraculous change came over Uncle Ben. Not only was this evident by the inserts in his diary, but mom also tells me that it seemed nothing outside of regaining his lost sight could have made Uncle Ben any happier than receiving that job.

April 10: "Why I hardly have time to sit down and smoke a cigarette anymore. When I'm not at work, Joe or Dan is here to play cribbage. Time flies so fast."

Uncle Ben now felt he was worth something and that he could be useful. Moral worth—that's what Uncle Ben was searching for—the effort to prove that he, as a man, was not spent, that he could be helpful and efficient without his eyes.

Dignity? Yes, Uncle Ben found it. And it was not in self-pity or in the sympathy of others. It was not even in the knowledge he himself had that to work—even if blind—was possible.

No, none of these fulfilled the needs of my blind Uncle Ben. None of these could fulfill the needs of any handicapped person. Only acceptance by others could possibly arouse the tiny flame of hope and pride and dignity, which still flickered unsteadily within the very depths of Uncle Ben's soul. Only the perception that others still looked upon him as a complete man could bring back the necessary element of Uncle's Ben's life. Only the satisfaction that he had contributed something to life, could render Uncle Ben happy.

Just before Uncle Ben's untimely and tragic death, he had time to make one more entry in his diary:

April 11: "When I think of all that has happened to me since 1941, I realize that in sorrow there is always the seed of happiness present. The only necessary element for growth is nourishment. I found my nourishment in employment. May God help others like me."

I loved Uncle Ben dearly and now I miss him. His happiness spread like sunshine upon everyone near him. I loved him for the deep understanding which he held for every human weakness; I loved him for the manner in which he helped all those in need.

Yes, Uncle Ben was a handicapped person, but he regained everything he had lost twofold. What was his secret?

April: "Faith in God has shown me the way back to a normal life; but acceptance by my fellow man has provided me with passage to that life. My job was my passport to dignity."

Crisis in Korea

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. DORN of South Carolina. Mr. Speaker, the Secretary of State helped the enemies of America by criticizing Syngman Rhee last week. The Secretary's untimely remarks may have lost to the free world this devoted and courageous champion of freedom. The following editorial in the Washington Evening Star several days ago warned us of the Secretary's folly:

CRISIS IN KOREA

If the State Department is trying to bring down the government of Syngman Rhee in its hour of crisis, the lecture which Mr. Herter has addressed to the South Korean Ambassador makes a certain amount of sense. If this is not the case there is a notable out-of-this-world quality about the Secretary's dissertation on what is and what is not suited to a free democracy.

Of course, there is nothing resembling a free democracy in Korea, as that term is used in this country. And we don't think there will be, in Korea or in many other Asian countries, for a long time to come.

Nevertheless, certain facts appear to be clear. One is that Mr. Rhee's Liberal Party, even assuming strong-arm tactics, won an overwhelming popular indorsement last March 15. According to the announced results, 97 percent of the eligible Korean voters cast ballots and 9.5 million of these were for Mr. Rhee. It appears that about 1.2 million ballots were marked for his opponent, who died in the United States shortly before the election. More significantly, Mr. Rhee's handpicked running mate, Lee Ki-poong, received 8.2 million votes to 1.8 million for his Democratic opponent, John Mr. Chang. Some 330,000 vice-presidential ballots were declared invalid, and presumably may have been cast for Mr. Chang.

Is this statement of the voting results, released by the Korean Election Committee, false? Our State Department makes no such claim. And if it is not false, can the one-sidedness of the outcome be attributed to strongarm tactics? We doubt it very much. The probability is that Mr. Rhee's party was chosen by a clear-cut majority.

What are the facts about the rioting, which began in less serious form a month ago? According to the Associated Press, police countermeasures at first were relatively restrained. This seemed to encourage the mobs. This week, when the heavy loss of life occurred, the mobs were on the verge of taking over Seoul. Led by high school and college students, they stormed through the streets, stoning police, burning buildings and commandeering police cars. Some 500 students swarmed over a barbed-wire barricade in front of the official residence of President Rhee. At that point the police opened fire and many members of the mob were killed or wounded.

This was deplorable. But at that stage one of two choices was available—bow to mob rule or use force. We think it was necessary to use force, and that force will continue to be necessary until order is restored. The alternative is for the Rhee government to abdicate, and we do not suppose this is what the State Department wants. Nevertheless, Mr. Herter's pronouncements will serve to encourage the rioters—a most unfortunate result, unless the State Department is in possession of justifying facts which it has not revealed.

If the issue is the alleged fraud in the election, that question is before the Korean courts. And unless the State Department also thinks these courts are corrupt, it ought to await their verdict before indulging in further dissertations on the virtues of free elections. It should also bear in mind that South Korea has just recently been through a shattering war, and that it is still very much under the Communist guns. Even today, the climate in Seoul is hardly conducive to the kind of free democracy which is able to flourish in Washington.

Kaskaskia Reservoirs Will Bring Great Boom to Illinois' Heartland

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. MACK. Mr. Speaker, the Army Engineers' flood control program for the

Kaskaskia River Valley is vital to the prosperity of Illinois. Completion of two dams and reservoirs—one at Shelbyville and the other at Carlyle—will bring an industrial boom to the heartland of our State.

I testified recently before the public works subcommittee of the House Committee on Appropriations in support of continued Federal financial assistance for these projects. Because some opposition was expressed at the hearing, I include my testimony at this point so that the House may know that these projects have the virtually unanimous support of the people of my area:

Mr. MACK. Mr. Chairman, I appear before your committee today to make a strong appeal for the continuation of the development of the Kaskaskia Valley and, specifically, to request an appropriation of $250,000 to continue planning the proposed reservoir at Shelbyville, Ill. It is my understanding that the Corps of Engineers has requested this amount as necessary for orderly planning of this very important project.

The development of two Kaskaskia Reservoirs, one at Carlyle and the other at Shelbyville, will, in my opinion, bring the greatest boom the heartland of Illinois has had since the advent of the railroads. The development of this great river basin with an adequate water supply will eliminate very difficult economic conditions caused by the closing of the coal mines in southern Illinois. I am confident that this great industrial boom will be associated with the completion of these projects.

For many years Illinois has had an inadequate water supply. Because most of the State is bounded by major rivers, efforts never were made to construct reservoirs and provide adequate water supplies in other areas of the State. The Kaskaskia River, which lies in the geographical center of the State and is Illinois' second largest river, has been permitted to run uncontrolled throughout the 142 years that Illinois has been a State of the Union. Ironically, the first capital of Illinois was located near the Kaskaskia River and, because of the treacherous floods, it had to be abandoned. As a matter of fact, the site of the original capital is now completely under water.

The Corps of Engineers has located two reservoirs on the Kaskaskia to control floods. They have indicated that it is essential that the double reservoir system be employed to do the proper job. I am hoping that you will continue to support this program so that this river basin can again serve a useful purpose.

It has been called to my attention that within 3 years alone, according to a report from the Agricultural Extension Service, $4 million worth of crops has been washed out in this valley to say nothing of the extensive damage to other property. However, in the same 10-year period when the floodwaters were doing this tremendous damage it has been vividly driven home that our water supply in Illinois is totally inadequate. In the last 10-year period we have had two droughts which caused nearly one-half of our cities to be without an adequate water supply. On one occasion Lake Springfield, the second largest manmade lake in our State, went dry.

I realize that this reservoir will serve many useful purposes other than flood control and water supply but these two considerations are vitally important to my constituents in Illinois. These two lakes will by far be the largest in our State and will have a tremendous recreational value. These twin projects also will help navigation in the lower Mississippi.

The Army Engineers have estimated that the lake project at Shelbyville, Ill., will cost $27,470,000. This of course is a substantial sum but it must be remembered that the Federal contribution is only $18,500,000 and nearly one-third of the cost, approximately $9 million, will be contributed by State and local agencies.

The recent floods emphasize the importance of this project. Just last week 15,000 acres of farmland were under water in Shelby and Moultrie Counties alone. Almost every year we have a repetition of this as the Kaskaskia goes on a rampage, inflicting damage on thousands of dollars' worth of crops in the valley. The crop damage in the valley came to more than $3 million in the 3 years of 1956, 1957, and 1958, not to mention the damage to other property.

The Kaskaskia Valley Association has developed enthusiastic and virtually unanimous support for this project. I want to dispel any idea that anyone might have that the people of Illinois, and especially the people of Shelby and Moultrie Counties, have any objection to this project. I have been familiar with this project for 5 years. During that time I have not had a half dozen letters in opposition to this program. The five letters I did receive were from property owners who would be forced to sell their property. They did not oppose the program but expressed some regret that they would be forced to sell their property.

I make this statement because I understand that some newly organized group is to appear and express opposition to the program. It is my understanding that they do not come from my area in Illinois and that, in fact, their membership includes not one resident of either Shelby or Moultrie County.

Mr. Chairman, thank you for this opportunity to testify before your committee. I want to commend you on the great job you are doing. Every dollar you appropriate for these projects which conserve our natural resources is an investment in America and, as a result, will make our great country richer.

Our Youth Must Grow to Their Full Potentialities

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. O'HARA of Illinois. Mr. Speaker, that the White House Conference on Children and Youth had a message for all of us is tersely reported by Mary Herrick, a teacher at Du Sable High School and chairman of the Committee on Finance and Taxation of the Chicago Teachers Union. Miss Herrick's article from the Chicago Union Teacher follows:

REPORT FROM THE WHITE HOUSE ON CHILDREN AND YOUTH

(By Mary Herrick)

Seventy-six hundred people attended the 1960 Conference on Children and Youth. Five hundred of them were high school or college student, and 500 were from 73 foreign countries. They came from every State in the Union including the new ones. They represented every phase of the national life—judges, physicians, social workers, labor leaders, school people, psychologists, leaders of youth groups, and religious leaders.

Mr. Fewkes represented Senator PAUL DOUGLAS at the conference. Miss Herrick was invited to serve as a resource person.

President Eisenhower addressed the group, which had come at his invitation, on Sunday evening, March 27. President George Meany, AFL–CIO, made one of the major speeches. After listening to speakers in large groups, the entire conference was divided into 200 small discussion groups. From these small groups came 1,600 different recommendations for action to help youth.

These recommendations minced no words, but went straight to the heart not only of the problems of youth, but to those of the Nation and the world. More than half of them dealt with human relations. Definite steps to eliminate any kind of discriminations in educational opportunities, in housing, in employment, and in the exercise of the right to vote were set out in no uncertain terms. The nonviolent "sit-ins" of the Negro youth in the South were encouraged. Federal aid for education was urged as an immediate necessity not only by the conference, but by the Secretary of the Department of Health, Education, and Welfare, who spoke on April 1.

Many speakers pointed out the international status of youth in our shrunken, explosive, changing world. It was pointed out that the uncertainty of our future should not deter youth from positive action to make democracy a reality in the world. This is the cause our generation has to work for, not mere security in attaining things. If our youth do not seek such causes it is partly because our ideals are taught in a vacuum where action to implement them is discouraged. Thirteen million children in the South of all racial groups are being taught one thing and watching adults do another.

George Edwards, supreme court justice of Michigan, summed up the ideas of many of the speakers in these words:

1. We must make our cities fit for children to live in.

2. We must make education really universal and more useful for each child. (He recommended a maximum classload of 25.)

2. We must cut out the ugly scar of race discrimination from the face of America.

4. We must at least give children equal opportunity to keep out of jail.

5. We must regain our belief in the importance of family life.

6. Adults must place moral values above material success if we want children to do so.

The conference was a tremendous and inspiring experience. One could not help feeling in these responsible people a sense of urgency—a sense that there was no time to waste in changing the situation in American life which are crippling the lives of millions of our children. If our youth can not grow into their full potentialities, not only they, but the Nation and our civilization may not survive.

Communist Caribbean?

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following is a résumé of a talk I made at the Department of Virginia, Disabled American Veterans' banquet, March 26, 1960:

The United States should revise and restate the Monroe Doctrine to include all forms of infiltration and subversion by foreign powers in Cuba, Central, and South America. Affirmative action is desperately needed.

Our present vacillating policy toward South and Central America will lead to disaster. Fidel Castro's government in Cuba is a puppet government. Cuba, under Castro, is a captive nation. Unless Castro is checked by the United States, Cuba could become a Communist missile base threatening the security of the Western Hemisphere. Castro is following the same pattern of agrarian reform inaugurated by the bloody Communists of Russia and Red China. Agrarian reform is always followed by complete military dictatorship and eventually aggression. It is a slogan to hide more sinister developments. Cuba is the Formosa and Okinawa of the Western Atlantic. Cuba is between North America and South America. Just as control of the Mississippi divided and assured military defeat of the Confederacy, Cuba in the hands of the Communists will divide the western world and cut communications between the Atlantic and Pacific by controlling entrance to the Panama Canal.

Communist strategy in the Caribbean is part of a giant Communist pincers movement aimed at the industrial heart of the United States. Communist missile and air power is being assembled in Siberia to strike through and over Alaska and the North Pole into our heartland—the other through the Near East, Northern Africa, South America, and the Caribbean.

We are in the gravest danger and therefore should strengthen our Monroe Doctrine and should greatly increase our national offensive striking power. Part of this Communist military strategy is agitation all over the world with the object in mind to make the United States spend foreign aid in the wrong places at the wrong time. American money diverted from missile power and air power to the periphery of Russia is military potential that will be bypassed or used by Russia against the United States. This agitation by Russia not only encourages excessive spending by the United States in areas close to Russia, but it also adds to inflation in the United States which cripples the U.S. defense dollar. U.S. foreign aid must be reduced and this money diverted to U.S. retaliatory striking power. This policy will not only afford the United States better protection, but is the only real defense of India, West Germany, Greece, Turkey, Malaya, and the Near East.

The Disabled American Veterans must fight in peace as you fought in war. It is just as important that we fight to prevent war as it is to win a war when once we are involved. The only way we can prevent war is through modern superior strength. Our present military policy is largely based upon concepts of the past. We have an outmoded, purely defensive foreign and military policy. We must eliminate the negative and accentuate the offensive. We should have listened to Billy Mitchell in the early 1930's. We should discard today the recommendations of "Tipperary generals" and "Pearl Harbor admirals."

The average age of our American atomic and missile scientists is 29. These men hold the key to our future military security. Of equal importance is a U.S. Intelligence Agency, second to none. If we know Russian military plans of aggression before they move, they will never move.

Summit conferences and goodwill tours are part of the Soviet blueprint for world conquest. Khrushchev's visit to the United States was the signal for an attempt to seize the Panama Canal by Communist agitators. It was the signal for agitation in Venezuela. It was the signal for frantic ravings by Castro against the United States, followed by Russian military aid to Cuba. The coming summit conference in Europe will be the signal for further Communist infiltration and aggression.

We can and must put Khrushchev on the defense by refusing to meet him anywhere until he gives the captive nations their freedom as promised in sacred treaties. We should remember Munich, Yalta, and Potsdam.

Resolutions Concerning Management of Our National Forests

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. WOLF. Mr. Speaker, I am pleased to place into the CONGRESSIONAL RECORD for the information of my colleagues two resolutions adopted by the upper Mississippi Valley section, Society of American Foresters, at its meeting held in the scenic city of McGregor, Iowa, on April 1, in support of H.R. 10572 and S. 3044, to authorize the national forests to be managed under principles of multiple use and to produce a sustained yield of products and services:

SOCIETY OF AMERICAN FORESTERS, UPPER MISSISSIPPI VALLEY SECTION—RESOLUTION CONCERNING LEGISLATIVE SANCTION OF MULTIPLE-USE MANAGEMENT OF THE NATIONAL FORESTS—ADOPTED BY MEMBERSHIP VOTE APRIL 1, 1960, AT MCGREGOR, IOWA

Whereas the 180 million acres of public land within the national forests contain a significant part of the Nation's outdoor recreation, range, timber, watersheds, wildlife, and fish; and

Whereas these renewable natural resources and services within the national forests, due to increasing population and better accessibility, are rapidly growing in value to the social and economic welfare of the Nation; and

Whereas the policy of managing these resources for multiple use and sustained yield as practiced by the Forest Service will yield the maximum of products and services from these lands in the long run; and

Whereas there has been no legislative action by the Congress directing the Secretary of Agriculture to manage outdoor recreation, range, timber, watersheds, and wildlife, and fish on the national forests for multiple use and sustained yield: Now, therefore, be it

Resolved, That the Upper Mississippi Valley Section of the Society of American Foresters urges passage by the Congress of the multiple-use bills S. 3044 and H.R. 10572; and further

Resolved, That copies of this resolution be sent to appropriate committees of the Congress with the request that it be included in hearing records on the above-mentioned bills; and further

Resolved, That copies be sent to all Members of Congress from Iowa, Minnesota, and North Dakota with the request that they actively support and urge passage of these bills.

SOCIETY OF AMERICAN FORESTERS, UPPER MISSISSIPPI VALLEY SECTION—RESOLUTION CONCERNING FEDERAL GRANT FUNDS IN SUPPORT OF AGRICULTURAL EXPERIMENT STATION RESEARCH—ADOPTED BY MEMBERSHIP VOTE APRIL 1, 1960, AT MCGREGOR, IOWA

Whereas the agricultural experiment stations have requested a $14 million increase in Federal grant-in-aid money for the State experiment stations to accelerate research in the fields of forestry, soil and water, marketing and utilization, and basic research, in fiscal year 1961; and

Whereas a greatly expanded research program is required to meet the needs of an expanding population for wood, forage, water, wildlife, and recreation; and

Whereas the agricultural experiment stations within the framework of the land-grant institutions already have excellent libraries, unique and often expensive laboratory equipment, and outstanding scientists qualified to undertake the needed research; and

Whereas the graduate programs of the forestry schools associated with the agricultural experiment stations are the lifeblood of research personnel needed by all agencies engaged in forest research: Now, therefore, be it

Resolved, That the upper Mississippi Valley section of the Society of American Foresters urges the appropriation of the requested Federal grant funds, including the $5 million for forestry research; and further

Resolved, That copies of this resolution be sent to all Members of Congress from Iowa, Minnesota, and North Dakota with the request that they actively support the appropriation; and further

Resolved, That copies also be sent the Secretary of Agriculture, and the chairmen of the House and Senate committees considering these appropriations.

One Hundred Thousand Rural Wisconsin Families Speak

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, when 400 of Wisconsin's rural electric and telephone co-op leaders were in Madison, Wis., March 28–30 for the 24th annual meeting of their statewide association, Wisconsin Electric Co-op, they adopted a series of resolutions on matters relating to the rural electrification movement. These resolutions represent the thinking of nearly 100,000 rural Wisconsin families as expressed by their official delegates to this meeting. Under leave to extend my remarks, I want to include eight of those resolutions in the RECORD:

RESOLUTIONS ON THE REA ACT

Be it resolved, That we hereby express our opposition to any and all of the proposed amendments to the REA Act in an abiding conviction that it will continue to serve the best interests of rural people, of our electric and telephone systems, and of the general public as enacted.

COOPERATIVE TAXATION

Whereas our Nation has historically encouraged and fostered the concept that individuals and organizations can work together on a nonprofit basis to provide themselves with essential services; and

Whereas an increasing number of small independently owned businesses, including farm producers, find that joining together in sponsoring nonprofit integrated operations is their only effective means of competing with highly organized big business; and

Whereas our Nation's tax policies have always recognized the nonprofit nature of such operations, even encouraging their formation and development through the administrative agencies of Federal and State Government; and

Whereas genuine cooperatively owned businesses operating on a nonprofit basis have proved a bulwark against the inroads of unfair competition and helped offset the growing concentration of economic power in fewer and fewer hands; and

Whereas the Congress of the United States is now considering proposals recomemnded by the Secretary of the Treasury which would tax all net margins of cooperatives if equity capital is not revolved at least every third year and 4 percent interest is not paid on outstanding patronage capital: Now, therefore, be it

Resolved, That we oppose the proposal of the Secretary of the Treasury as discriminatory toward cooperative business and totally destructive of cooperative enterprise and that while we are aware that a spokesman for the Treasury has stated that REA-financed cooperatives are specifically exempted from the provisions of the Treasury's recommendations, that if this proposal is enacted it would be the opening wedge in an effort to include all types of service-at-cost businesses under its provisions.

SILVER JUBILEE

Whereas the REA program celebrates its 25th anniversary in 1960 of its establishment on May 11, 1935; and

Whereas primarily as a result of this program the percentage of electrified farms in the Nation has increased from 10 percent just 25 years ago to over 96 percent today; and

Whereas the availability of quality central station electric service in our rural areas has stimulated a substantial increase in nonfarm residences, businesses and other establishments to add diversity and increased stability to our rural economy; and

Whereas almost $3.5 billion in public credit has been invested in this program under which service is being provided on a nonprofit basis, with all loan funds being repaid in full with interest under a repayment record unmatched in modern finance for its almost nonexistent delinquency rate; and

Whereas this program is benefiting the nonrural segment of our economy by generating sales of over $18 billion worth of appliances and equipment, contributing millions of dollars each year in additional tax revenue, providing employment to scores of thousands of workers; and

Whereas authoritative estimates predict that the power requirements of REA-financed system's patrons will increase fourfold during the next 15 years alone: Now, therefore, be it

Resolved, That we urge each of our members and patron systems to carry on a concerted public information program throughout 1960 to achieve wider public understanding of the impact of the REA program in stimulating our economy through increased purchasing power, employment, lower costs of food and fiber, elimination of backbreaking chores, increasing quality and sanitary standards of food and injecting an element of competition in this largely monopolistic industry; and be it further

Resolved, That this public information program emphasize the expanding influence that our electric systems will play as the most rapidly growing segment of the power supply industry. Every citizen of the United States is increasingly sharing in the benefits generated by applying the public credit to give our rural people a powerful tool to assure adequate, low-cost electric energy in those rural areas which the commercial industry long ago abandoned as unfeasible for profitable service; and be it further

Resolved, That we dedicate this silver jubilee year to creating widespread public understanding of the yardstick our rural systems can provide in achieving great new concepts in quality electric service and development of sound new uses of electricity for better living standards and increased productivity on our farms.

BENEFITS OF OUR PROGRAM TO WISCONSIN

Whereas there prevails among too large a segment of the general public a misunderstanding as to the role of our rural electric systems perform and the fine manner in which they have carried out their responsibility; and

Whereas by direct comparison of the size, scope, and limitations under which our electric cooperatives operate there will be greater appreciation and understanding; and

Whereas too few of our public understand, for instance, that electric cooperatives are limited to service of those areas that are existing industry could not or would not serve because they were unprofitable; and

Whereas in Wisconsin electric cooperatives serve areas averaging only three patrons per mile of line constructed, while commercial utility areas average 28.8 customers per mile; and

Whereas Wisconsin's cooperatives averaged in 1958 only $340 revenue per mile of line compared to $3,500 per mile for commercial utility companies; and

Whereas electric cooperatives cannot provide retail service within communities of over 1,500 people; must serve all potential consumers within an area; must provide service on a nonprofit basis, and cannot serve any customer of another supplier; and

Whereas loan funds made available by REA must be repaid in full with interest and our Wisconsin cooperatives have not incurred a single cent in delinquency; and

Whereas electric cooperative consumers in 1960 will pay almost $1 million in taxes as part of their power bills; and

Whereas electric cooperatives of Wisconsin have created almost $1 billion in additional purchasing power to enrich our State economy: Now, therefore, be it

Resolved, That we increase our efforts during this silver jubilee to call the Wisconsin citizenry's attention to the achievements of our cooperatives despite one-ninth as many consumers per mile and one-tenth the revenue per mile of commercial utilities and despite legal restrictions on our ability to expand into areas of greater economic potential; and be it further

Resolved, That we work toward greater public understanding of how every citizen of our State benefits from the employment, purchasing power, and taxes paid as the direct result of this rural improvement program, as well as by the availability of electric energy to all Wisconsin citizens.

REA ELECTRICAL LOAN APPROPRIATION

Whereas rural electric systems of the Nation must be able to meet demands for electric energy from their patrons which are expected to increase fourfold during the next 15 years; and

Whereas orderly planning and expansion must be carried on with adequate new capital funds available to achieve increased ability to serve on the most economical basis; and

Whereas scheduled and advance loan repayments and interest payments on prior loans to REA will substantially measure up to new loan capital requirements during fiscal 1961: Now, therefore, be it

Resolved, That we urge the Congress of the United States to authorize and the President to approve adequate electric loan funds to meet the provident requirements of borrowers as established by the annual loan survey now being conducted by the National Rural Electric Cooperative Association.

REA GENERATION AND TRANSMISSION LOANS

Whereas from one-third to over one-half the cost of supplying electric energy to patrons of our rural electric systems is generation and transmission of electric power to the load centers of our distribution systems; and

Whereas fundamental to maximum use of electric energy by our patrons is full assurance of adequate supply, high service standards and lower cost as consumption rises; and

Whereas many electric systems, including many WEC patrons, have found that when they lack control of their wholesale energy supply, they have faced harassment as adequate supply has been hamstrung by monopolistic control to enforce service restrictions as to size of loads served, interference with retail rate application and increasing wholesale power costs; and

Whereas almost uniformly our member systems who control their own source of power supply have been able to carry on integration steps and application of new technology for greater efficiency to the end that such control is a vital and valuable tool in their efforts to reduce costs and improve service standards; and

Whereas the availability of REA loans for the purpose of installing generation and transmission capacity where feasible and necessary has historically proven the most valuable weapon possessed by our electric systems in providing themselves with effective bargaining power for their wholesale power supply: Now, therefore, be it

Resolved, That we go on record expressing our vital concern for the continuing need for generation and transmission loans by REA whenever and wherever justified and despite the growing viciousness of attacks on this program by commercial companies seeking to block them.

REA TELEPHONE LOAN PROGRAM

Whereas under the REA telephone loan program, on January 1, 1960, loans had been approved to extend new or improved telephone service to 68,986 rural families and businesses in Wisconsin; and

Whereas under this program in Wisconsin, a total of 43 companies have either been formed, reorganized, or modernized to provide the highest quality dial service at an expenditure totaling over $30 million; and

Whereas during the past 10 years this program has made funds available on a loan basis to be repaid with interest to bring service to a very large percentage of all rural people in the Nation; and

Whereas 40 percent of our farms in the Nation and about 25 percent of our farms in Wisconsin still lack telephone service: Now, therefore, be it

Resolved, That we endorse the rural telephone loan program of REA and urge that the Congress continue to appropriate sufficient funds to make telephone service available in all rural areas of the Nation; and be it further

Resolved, That a percentage of such funds allocated each year be definitely earmarked for use by nonprofit associations, mutually owned by the subscribers with service being rendered on a cost-of-service basis; and be it further

Resolved, That during the 1961 fiscal year a total of $50 million be earmarked for such cooperative association loans, and with the Administrator of the REA program granted discretionary power to allocate to other borrowers that part of such earmarked funds as he feels are not needed to meet the loan requirements of borrowers providing service at cost; and be it further

Resolved, That the Congress recommend to the Administrator of REA that his field staff be directed to promote and encourage the formation and development of service-at-cost telephone companies in areas now lacking adequate service.

ATOMIC ENERGY COMMISSION

Whereas the Atomic Energy Commission is actively considering a proposed working

agreement with Dairyland Power Cooperative under which AEC would construct a pressurized water nuclear powerplant at Dairyland's Genoa generating station with steam from the unit being utilized in Dairyland's turbogenerator to produce power; and

Whereas if this proposal is eventually approved and the plant constructed, Dairyland would be the second of WEC's patron systems exhibiting such leadership in exploring areas of major technological improvement in the science of power production, inasmuch as Rural Cooperative Power, Elk River, Minn., is expected to be utilizing nuclear power within the year as a result of a similar agreement; and

Whereas the progressive and forwardlooking outlook of Rural Cooperative Power and Dairyland demonstrates to all America the leadership of consumer-owned power systems in their effort to further the technology and standards of service to their patrons: Now, therefore, be it

Resolved, That we congratulate the membership, directors, and management of these power cooperatives and endorse their efforts to assist the national effort to make nuclear power a vast new source of energy for the development of a better life for all mankind.

The Late Representative Russell V. Mack

SPEECH
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. TOLLEFSON. Mr. Speaker the House of Representatives lost one of its most able Members upon the death of Representative Russell V. Mack. His zeal and diligence in serving his district, State, and Nation were not surpassed in Congress. A man of high principle and integrity, he enjoyed the sincere respect of his colleagues. His friends both in and out of Congress were legion. All were shocked at the news of his passing.

Russell Mack was one of my real friends and his death was a personal loss to me. He was most cooperative and helpful in connection with problems that confronted me, and gave generously of his time and advice. That he did the same for his other friends was understood by all. I join with them in expressing grief at the occasion of his passing and in extending deepest sympathy to his devoted wife, Laura.

Mr. Speaker, I wish to include with my statement copies of editorials from the Tacoma News Tribune and the Seattle Times, together with a copy of a resolution adopted by the Seattle Chamber of Commerce:

[From the Seattle (Wash.) Times]
REPRESENTATIVE RUSSELL MACK

Russell Mack was a big man, plain spoken and sincere, who hated redtape and folderol. His favorite campaign tactic was to tour his third district in a door-to-door, grassroots appeal. He would walk into a store, his cigar leveled at the world like a cannon, offer a huge hand and say, "I'm Russell Mack, I'm running for Congress and I'd sure appreciate your vote."

In Congress Representative Mack again preferred the direct line of attack. He was an outspoken critic of the import of seafoods from foreign countries. He was equally concerned with programs to encourage the lumbering industry, a mainstay in the economy of his Grays Harbor constituency and the State of Washington.

Russell Mack was a firm supporter of bipartisan foreign policy. He also pushed hard for the development of natural resources in this State. He served six terms in Congress, after winning a special election to that office in 1947. He was named Republican whip for the 16 Western States in 1955 and was a member of the Republican Party's 20-man policy board.

The State of Washington and the Third Congressional District have good reason to mourn the loss of this big, bluff man who had a talent for getting things done.

[From the Tacoma (Wash.) News Tribune]
MR. MACK'S DEATH GREAT LOSS

Representative Russell V. Mack was a man who served his country and his southwest Washington congressional district with distinction and with a zeal not surpassed in Congress. His death on the floor of the House of Representatives is a great loss to his district, to our State, and the Nation.

Mr. Mack loved his country and he loved to work for good government. Politics, which is only the science of government, interested him intensely and he entered into his congressional office back in 1947 with a zest that one seldom encounters in public life. He was a strong campaigner and a great fighter, and his district has been helped tremendously by those qualities.

The Congressman was a high-ranking member of the House Public Works Committee, a committee so important to the southwest Washington area because improvement of rivers and harbors is in its domain. He worked tirelessly for improvement of the twin harbors, for rivers, for the Westport fishing base. A strong believer in promoting local industry, he fought the import of Russian crab and Japanese tuna and resisted the shipment of lumber to Japan to be manufactured into finished products. He battled for U.S. salmon fishermen's rights—in fact, Russell Mack was a stalwart defender of American industry and the men who work in the mills, the factories, or with the nets.

He wanted an America that is financially sound and therefore worked in behalf of balanced budgets and against the waste of public funds.

His shoes will be most difficult to fill. It would be wonderful if his district should, in a forthcoming special election, find another man such as he.

"MEMORIAL TRIBUTE TO RUSSELL V. MACK

"In recognition of his outstanding contribution to the civic, business, and political development of the State of Washington, and the Pacific Northwest, the Seattle Chamber of Commerce pays tribute to the memory of Russell V. Mack who passed away on the 23th day of March 1960.

"Always he gave willingly and generously of his time, thought, and energy to the welfare and advancement of his State and Nation. The earnestness and leadership he brought to any cause that he espoused and his unselfish devotion to things worth while gives him a lasting place in the memory of all whose privilege it was to know him and to serve with him: Accordingly, it is

"*Resolved*, That the members of the board of trustees of the Seattle Chamber of Commerce adopt this tribute to the memory of Russell V. Mack and, making permanent record of this expression of respect and esteem, convey their sincere and heartfelt sympathy to the members of his family."

Dated this 7th day of April 1960.

SEATTLE CHAMBER OF COMMERCE,
JACK GEOPFROY, *Secretary*.

West Virginia Is Getting Shortchanged: XVIII

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. HECHLER. Mr. Speaker, during the first session of this Congress, I repeatedly called the attention of this House to the unemployment situation in my State of West Virginia. I introduced, supported, and voted for many measures designed to help West Virginia move forward and achieve industrial progress.

In addition, I brought to the attention of my colleagues on numerous occasions the shocking discrimination against West Virginia by certain Government departments, specifically, the Departments of Commerce and Defense. I pointed out that this State, suffering the burden of chronic unemployment, ranked dead last among the 50 States in Department of Defense spending and Department of Commerce activities in proportion to population .

Far from asking for a handout or a dole for West Virginia, I merely championed the cause of democracy and fair play, urging that West Virginia—sorely beset by economic problems—deserved at least to be given its just share of governmental activities.

West Virginia has the highest rate of unemployed of any State in the Union, yet the lowest number of Department of Commerce employees per capital. West Virginia had the highest number of its young men per capital in the Nation who were killed and wounded in the Korean conflict, yet she is last among the States in defense expenditures in relation to population.

Now I must bring to the attention of the House another disturbing example of the way West Virginia is not getting its fair portion of Government activities—and I regret to say that this falls in an area where real help could be afforded to help our State's economy.

The Small Business Administration was set up a few years ago in a commendable effort to help the Nation's small businessmen and industrialists to cope with competition from growing supercorporations and monolithic industrial empires. The SBA was created to keep our economy diversified and strong, resting on a broad, general base.

The SBA's basic effort is to keep small businesses and employers in such competitive position that they are not swallowed by larger corporations, and to maintain industrial production over a wide area of the Nation.

The need for the services which the SBA should provide is very great in West Virginia, where most of our businesses are small.

Small manufacturers seeking to utilize the labor surplus which exists in every sector of the State could well use SBA assistance to expand plants and provide new jobs.

Other manufacturers, seeking to expand employment, could use SBA assistance to create product diversification or expansion into new market territories.

Still other firms might want to transfer their primary production into other lines, with SBA assistance.

There are innumerable other situations and examples that I could list to show how the Small Business Administration could provide aid—at no cost to the taxpayer other than administrative expenses—which would have a positive effect in stimulating West Virginia's economy.

West Virginia, then, should be at or near the top in the list of State participation in SBA loan activities.

However, I regret to say, this is not true.

Instead, in proportion to population West Virginia ranks 45th among the 50 States in SBA participation, very near the bottom.

Of the States below it, three—New York, New Jersey, and Illinois—are the heartland of the Nation's financial institutions, where many diversified lending and financing services already are available, and where small businesses can find private, outside help more readily.

Only two of the States below West Virginia in SBA participation—North Carolina and Maryland—can be fairly compared.

If there is an obvious need for additional SBA activity in an area such as West Virginia, then why has participation been so small?

The answer must lie in one of two areas: Either the Small Business Act is being administered in a way that precludes the businesses which could provide needed jobs in our State from obtaining SBA loans; or, the law itself is set up in such a way that these firms cannot obtain financial aid.

I suspect that a combination of these causes is at the root of this hopeless inadequacy of SBA to meet the needs it was created to meet in the areas where such assistance is most needed.

Mr. Speaker, I plan to introduce a bill which I hope will mean steps forward in remedying both these defects.

As my colleagues all know quite well, the Small Business Act contains provisions which offers special forms of loans and assistance to area stricken by drought, flood, hurricane or other natural disasters. Thus, the Federal Government recognizes that areas reeling under the onslaught of an act of God deserve and need particular types of help until their economies can adjust to the situation.

Mr. Speaker, I submit that chronic unemployment, shutdown plants, declining payrolls caused by mechanization, diminishing markets and other causes, are just as much a catastrophe as any flood, hurricane, or drought that ever smote this Nation.

I plan, therefore, to introduce a bill which would define clearly the intent of the Small Business Act to provide such special forms of aid to depressed areas, and would direct the Administrator of the Small Business Administration to provide aid to a chronically depressed area—under definitions clearly spelled out in the act—just as he would be required to do for areas hit by natural disasters.

This is not an attempt to seek a handout from the Government. It is merely a realistic approach to a growing national problem, one which will afflict more and more sections of the economy and regions of the Nation as the advancing age of automation strides forward, in the same spirit of helpfulness, neighborliness and sympathy that inspires us to help the unfortunate victims of other catastrophes.

Under unanimous consent, I include in the RECORD statistics bearing out the fact that West Virginia is being shortchanged in the activities of the Small Business Administration:

State	Cumulative Small Business Administration loans, approved Sept. 29, 1953, to June 30, 1959	Total amount approved	Population, 1950	Ranking basis: Population per each SBA loan granted
1. Alaska	132	6,420,255	128,643	975
2. Kansas	874	26,155,485	1,905,299	2,179
3. Montana	202	9,180,930	591,024	2,926
4. Nebraska	351	14,347,054	1,315,510	3,806
5. Idaho	144	7,607,006	588,637	4,089
6. Rhode Island	166	4,658,147	791,896	4,770
7. Arkansas	383	13,858,533	1,909,511	4,985
8. Nevada	32	1,900,802	160,083	5,003
9. Arizona	149	7,047,010	749,587	5,031
10. Vermont	70	2,860,780	377,747	5,396
11. New Hampshire	93	4,727,800	533,242	5,733
12. Iowa	437	16,342,891	2,621,073	5,998
13. Washington	389	17,195,001	2,378,962	6,193
14. Maine	143	6,674,257	913,774	6,390
15. Minnesota	458	18,023,040	2,982,483	6,512
16. Oregon	234	11,838,065	1,521,341	6,629
17. Texas	1,140	52,592,049	7,711,194	6,764
18. South Dakota	96	3,850,925	652,740	6,798

Israel's 12th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. ANFUSO. Mr. Speaker, once again we celebrate the anniversary of the independence of the State of Israel. This year the anniversary occurs on May 2. Time marches on rapidly for only yesterday, it seems, we witnessed those great historical events connected with the restoration of Israel to statehood—and now we suddenly realize that 12 full years have elapsed since then.

The people of Israel, as well as the Jewish community in the United States, must surely experience a great sense of pride as they look back over these past 12 years and recount the notable achievements in building up Israel as an independent and democratic state. We in this country share in that pride because the American people have not only aided Israel from its very inception to attain its marvelous progress in every human endeavor, but we are particularly proud that Israel looks to our country for guidance, it is shaping its way of life and its concept of society in the image of America, and it has throughout the entire period of its existence become one of our best and most dependable allies.

The visit to the United States by Prime Minister David Ben-Gurion in March of this year further helped to cement strong bonds of friendship and understanding between this country and Israel. His talks with President Eisenhower, Secretary of State Herter, and other top leaders of our Government certainly served

to clear up possible misunderstandings and miscalculations rearding the situation in the Middle East, and Israel's views in particular.

Today, there is no doubt in anyone's mind that Israel is here to stay and that she is truly an outpost of democracy and a bulwark for freedom in that part of the world. But more than that is clear now to all right-thinking people. It is now generally recognized that Israel is vitally interested in maintaining peace in the strategic area of the Middle East of which she is a part. She is interested in the economic development of the area for the benefit of all people. She is desirous of settling regional problems, including the Arab refugee problem, in a peaceful manner. Furthermore, Israel is not planning to embark on any expansionist adventures, as is falsely maintained in certain Arab quarters, because such adventures would only lead to war and chaos.

I am very pleased that the House of Representatives saw fit to include in this year's mutual security bill a statement of policy expressing the sense of Congress that the United States favors freedom of navigation in international waterways and economic cooperation between nations. I was glad to support that statement.

Specifically, we had in mind the unilateral and irresponsible action of Egyptian Dictator Nasser in barring Israeli shipping from transit through the Suez Canal. We also had in mind the boycott being waged against Israel by the Arab countries, which is hurting them as much as Israel not only in dollars and cents, but in moral and political prestige, in world condemnation, and by the fact that it keeps the area in a constant state of turmoil. Such acts are very frustrating to the efforts of the United States and the United Nations to help bring about a greater degree of political and economic stability in the area and a higher standard of living for all the people.

In the statement of policy mentioned above it is specifically emphasized that "the purposes of this act are negated and the peace of the world is endangered when nations which receive assistance under this act wage economic warfare against other nations assisted under this act, including such procedures as boycotts, blockades, and the restriction of the use of international waterways."

One can only express deep regret that at a crucial period in human events, when mankind is faced with a struggle for survival against a ruthless tyranny, so much energy and effort are wasted in the Middle East in spreading hatred and distrust among the nations which only serves to weaken the area and to render it ripe for a Communist invasion. Instead of cooperating to build up the area economically, develop its human and natural resources, raise its standard of living, improve the standards of health and education, the nations of the Middle East are busy with plots and counterplots, with boycotts and blockades, with spreading hatred of their neighbors, and with pursuing a costly arms race which can only spell their own doom and endanger the peace of the whole world.

Unfortunately, in their blindness, the Arab leaders refuse to recognize facts or to consider reasons. Nasser does not seem to understand that hatred begets hatred, and that boycotts will bring forth counterboycotts. If he did not know it before, he should certainly know it now. For the past 2 weeks the Seafarers International Union which is headed by one of the ablest union leaders in this country and my good friend, Paul Hall, is conducting a counterboycott against the Egyptian ship *Cleopatra*, now stranded in a New York pier. Actually, the dockworkers in New York refuse to unload the cargo from the Egyptian vessel because of Nasser's treatment of American ships and seamen.

It is axiomatic that the insatiable desires of a dictator know no limits. Nasser only proves the old axiom once more. Because he has been able until now to get away with some of his irresponsible exploits against Israel, he believes he can also impose restrictions against American vessels and American seamen who use the international waterways of the Suez Canal or stop at Egyptian ports. He sees nothing wrong in practicing boycotts and blockades against others, but he resents it when the same practices are applied against him. He is resorting to all sorts of dire threats against American shipping, but does not stop to think of the consequences to Egyptian shipping, to the economy of his nation and the effect on his people. He is running true to form—a dictator never thinks about the welfare of his country and its people.

What Nasser fails to realize is that American seamen are freemen in a free country who are determined to protect their rights and interests. No rantings or threats by Nasser will deter them. Organized labor and American public opinion support their action. It is my belief that the Seafarers Union is performing a great service for the free world in teaching the Egyptian dictator a lesson in American democracy. I congratulate the leaders and the members of the Seafarers Union for upholding the standard of free labor in a free country.

In the light of these and other events in the Middle East, Israel seems to be the only levelheaded nation in the area. It knows what it wants and it is determined that the hostile acts of its Arab neighbors shall not deter it from its course. And that course is set in one direction—toward the attainment of a lasting peace in the Middle East. For this reason alone the people of Israel deserve our undiminished moral, political, and economic support.

On this occasion, the 12th anniversary of Israel's independence, I wish to extend my sincerest wishes to the leaders and the people of Israel. Together with these wishes go my prayers that they will soon realize their goals—lasting peace, economic independence, and a happy nation.

Amsterdam, N.Y., Chamber of Commerce Completes 75 Years of Distinguished Service to the Community

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. STRATTON. Mr. Speaker, the other evening in the city of Amsterdam, N.Y., in my district, one of the centers of the carpet-manufacturing industry in our Nation, there was held a banquet commemorating the 75th anniversary of the chamber of commerce in the city of Amsterdam. It was my honor and pleasure to be in attendance at this banquet, and to extend my congratulations to the chamber for the fine job which they are doing and to the outgoing and incoming officers for the key role that they have played and will play in keeping the economic life of this great community moving ahead. I mentioned in particular the fact that the job which the city of Amsterday is doing in helping to promote its own economic growth and survival stands out across the country as a brilliant and shining example for other communities in similar situations.

Under leave to extend my remarks in the RECORD, I include an editorial from the Amsterdam Evening Recorder of April 21 expressing the appreciation of the community to this great organization for the work they have accomplished:

[From the Amsterdam (N.Y.) Evening Recorder, Apr. 21, 1960]

SEVENTY-FIVE YEARS OF SERVICE

With the annual dinner dance Saturday night at the Columbian Community Center, Amsterdam's Chamber of Commerce will be commemorating 75 years of service to the community.

What has been accomplished in three-quarters of a century by the chamber reflects not only energetic leadership, but a willingness on the part of members to come to grips with community problems.

Where is the Amsterdam Chamber of Commerce going from here? That is the important question as Philip Spencer assumes the responsibilities that go with the presidency. While the task he faces will not be easy, we have every confidence that the general manager of radio station WCSS will prove equal to the challenge. But in the final analysis, the answer to that question will be provided by the measure of support forthcoming from the entire community.

The new head of the chamber, like his predecessor, Barthold K. Schotte, is typical of a long list of civic leaders who through the years have given much of their personal time and effort to the service of the community. The same can be said for the newly-elected board of directors.

As it begins its 76th year of community achievement, our chamber of commerce has many impressive plans for the future. But unless they can be put into effect for the best interest of the entire community such plans will mean little or nothing.

We owe it to ourselves to support the new president and his officers as they embark on one of the most difficult, and too often one of the most thankless, tasks in any community.

They cannot and should not be expected to do the job alone. They are deserving of the wholehearted support and encouragement of those they will be trying to help, and that includes all of us.

Youth of the Year a Student at Integrated High School

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. O'HARA of Illinois. Mr. Speaker, it is my pleasure to inform the House of a significant recognition of the quality in character and in achievement of the youth of the district of real brotherhood that I have the honor to represent in this body.

Annually the B'nai B'rith Youth Organization presents its award of Youth of the Year to the youth representing the highest type of Americanism and democratic citizenship as exemplified by the good neighbor. In 1957 the award went to John Williams, Jr., a student at Hyde Park High School in the Second District of Illinois. This year the Youth of the Year Award has been given to Richard Grant, also of Hyde Park High School. I know of no greater honor, or one more highly evaluated or appreciated by the people of our district, than this.

It is heartening to us to have this evidence that the youth of our district, where all races and all faiths work together in the spirit of brotherhood, are reaching for and gaining high goals in scholarly effort and in human relationships. Hyde Park is an integrated high school.

My heartiest congratulations and expression of appreciation of their good work in the cause of democratic citizenship go to the B'nai B'rith Youth Organization, to Dr. Milton A. Saffir, the chairman of the "youth of the year" committee, to the Right Reverend Monsignor Edward J. Kelly, director of the CYO, who joined in the presentation of the award, and to the faculty and students of the Hyde Park High School.

Needless to say, our district is very proud not only of Richard Grant but also of two other students at Hyde Park High School who were among the five finalists, Joan Lazarus and Richard Tani. That three out of five finalists, including the winner, in a citywide competition were students at Hyde Park, an integrated school, is worthy of national notice.

The sketches of the youth of the year and the two others from Hyde Park High School who finished among the five finalists follow:

RICHARD GRANT, YOUTH OF THE YEAR, NOMINATED BY HYDE PARK HIGH SCHOOL

Richard Grant is chairman of human relations committee of the student council. Currently vice president of the student council. Helped to found the youth commission on human relations. Chaired a seminar held in his community. Has worked with Catholic interracial council, National Conference of Christians and Jews, Illinois Commission on Human Relations. Was chairman of a PTA regional board discussion group "on leadership in brotherhood."

Was his high school delegate to the annual bill-of-rights celebration luncheon. Delegate to the annual high school intergroup relations conference. Participated in "youth march for integrated schools in Washington, D.C."

Has been a member of the ROTC for seven semesters, now a cadet sergeant.

Has high scholastic rating. Is taking accelerated work, including Russian and Latin. Will represent his high school in the district Latin contest.

JOAN LAZARUS, HONORABLE MENTION, NOMINATED BY HYDE PARK HIGH SCHOOL

Joan Lazarus is student advisor to the PTA. Has acted as liaison with parents of feeder schools. Has been leader in better racial understanding program. Organized a "Jewish life" display for her temple youth groups. Was presented to neighborhood church youth groups. Member of debate team, participating in brotherhood leadership program. Recipient of four high school civic awards.

Organized and directed interracial neighborhood play club for 20 to 25 children, ages 2 to 8.

Very active in leadership position in her temple youth group. Organized discussion groups, leadership programs, etc. Was chief organizer of the first schoolwide integrated dance held at her school.

She is valedictorian of her graduating class. Has had a perfect "S" record for 4 years. She is president of Junior Math Honor and secretary of Senior Math Honor, editor of school newspaper.

She has been captain of volley ball team, member of her class baseball team, is a white cap swimmer.

Has been assistant instructor in modern dance. Has studied piano for 11 years.

Selected by members of girls' athletic association and as nominee for State street council queen.

RICHARD TANI, HONORABLE MENTION, NOMINATED BY HYDE PARK HIGH SCHOOL

Richard Tani is an Explorer and Arrow leader in Scout work. Has held many positions in Scout work. Interested and active in many volunteer organizations, promoting brotherhood and human relations. Has appeared as speaker before several civic organizations. He is active in his interracial church group.

Has won major and minor athletic awards as member of high school swimming team for 4 years.

Scholastically he is an E–S student. He is a member of the Sigma Epsilon Honor Society. He is taking extra work because of his high grades.

He has helped organize four Scouting units in interracial areas. Has served as a faculty member of boy leader training course.

OTHER FINALISTS

The two finalists, not residents of the Second Congressional District, were Jack Greenberg, nominated by the B'nai B'rith organization, and Glenn Edward Michelson, nominated by Foreman High School.

Mr. Greenberg lives at 6215 North Rockwell Street, Chicago, and Mr. Michelson at 3319 North Karlov Avenue. Although they are not from the Second District it is only fair that a recital of their achievements should be included as a further stimulus to the youth of America. The sketches follow:

Jack Greenberg, 17, is a student at De Paul University. He was elected chairman of the youth advisory board of Mayor Daley's Chicago Youth Commission. Was chairman of several meetings of youth representatives who made recommendations to the adult board of the Chicago Youth Commission. Was service fund chairman of Robert Golden Memorial Foundation, raising funds for polio. President of Chicago region AZA. Directed citywide campaigns—helped raise many thousands of dollars for La Rabida Children's Hospital, Rest Haven, Cancer Society, and several scholarship programs. Chairman of his high school election commitee, conducted senior class officer elections. Was chairman of brotherhood assembly program. Represented Anti-Defamation League at Catholic interracial council youth study day program. Participant in organized athletic programs. Graduated in top 10 of his high school. Was semifinalist in Illinois State high school scholarship program. Was member of junior honor society. He has appeared on several radio programs. Active in Boy Scout work—patrol leader—vice president of district No. 6 (midwest AZA) and international chairman of B'nai B'rith community relations. Helped conduct AZA–BBG Institute of Judaism program at Northwestern Hillel Foundation. Was valedictorian of his Hebrew school graduating class. He was the BBYO "Youth of the Month" winner in the junior association of commerce and industry program. Has been designated as the outstanding AZA member of this area.

Glenn Edward Michelson is a charter member and officer of Key Club and works with the Kiwanis Club on behalf of his school and his community. He produced a 16-page booklet "Keynotes for Freshman," which is distributed to new students during their first few days in high school. Has taught himself braille in order to work with blind students. He reads to them and works with them. He is chairman of the tutoring committee of Future Teachers of America and assists in the school's tutoring program. He ranks first in his graduating class—is a member of the National Honor Society and Mu Alpha Theta, math honor club—finalist in the Illinois State scholarship competition and received a letter of commendation from the National Merit Scholarship corporation. He is currently attending the Mathematics Institute at Illinois Institute of Technology on Saturdays with a scholarship from the National Science Foundation. He is editor of the school yearbook. Has been chairman of various assemblies. Was a contestant in the Chicago Spanish oratorical contest. He holds the rank of first lieutenant in ROTC. Represented his school at Premier Boys State (American Legion). Extremely well thought of by faculty and students.

Better Try Again

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. BRAY. Mr. Speaker, sparked by the activities of the veterans of World War I, interest in pensions for our older veterans continues to grow throughout the country. The commander of Barracks No. 1178 of that organization, which is located in Brazil, Ind., has sent me an editorial taken from the January 21, 1960, issue of the Plainfield, Ind., Messenger.

The editorial follows:

[From the Plainfield (Ind.) Messenger, Jan. 21, 1960]

BETTER TRY AGAIN

With Congress in session again, World War I veterans are bringing some facts before them which they hope will be sufficient to get a pension bill on the statutes which will give these aging members of our citizenry a little compensation for the service which they rendered in the 1917–18 war. Ten thousand of them are dying every month—360 every day, 15 every hour, 1 every 4 minutes.

It is high time that the Government begin easing the last few months, days, hours, and minutes of this vanishing army which performed so gloriously at Chateau-Thierry, Belleau Wood, Mount Faulcon, in the Meuse Argonne, and on other fronts in those days 43 years ago. These men are now from 60 to 75 years of age and have never had any financial recognition for their services.

Strange as it may seem, veterans of World War II and the Korean war, who have had so much from the Government, are foes of a plan to pension the World War I veterans "because of the prohibitive cost." We'd like to ask just one question: Who has been paying the cost of their education, their pensions, their GI loans, and other benefits? If you stop to think, you'll realize it has been, for the most part, the veterans of World War I.

With the death rate among the World War I veterans as high as it is today, the cost of pensioning them will go down about 6 percent the first, 12 percent the second, and therefore, by 1976 only 6 percent of these men will be living, and the cost of the proposed pension will have been reduced by 94 percent.

Barracks No. 1178, Brazil, through its commander, Harold E. Stearley, is doing everything in its power to bring the matter before the attention of the present Congress. Every veteran of 1917 should write his Congressman urging support of a pension bill for the long-forgotten men of World War I.

Is Present Foreign Aid Achieving Mutual Security?

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. LEVERING. Mr. Speaker, I realize as the leader of the free world, America has an obligation to assist in maintaining the economic stability of other freedom-loving nations in a common defense against world communism. However, I am one of those who seriously questions whether the foreign aid program as presently constituted and administered is actually achieving mutual security—the objective we all so earnestly seek.

Mr. Speaker, I have repeatedly stated that we can't buy friendship with dollars, but that we could gain the good will and cooperation of the people in underdeveloped nations of the world by adopting the humanitarian, Christian manner with which we treat our neighbors next door—by sharing with them our blessings of abundance in food and fiber.

I believe the time is not far away when the American people, whose concern for the less fortunate in the world has been demonstratively generous in the past, will refuse to support the multi-billion-dollar appropriations for foreign aid unless we make greater progress in shifting from a program of giveaways to technical self-help projects—and unless we reverse the current policies which indicate that we can afford to be wasteful and extravagant in pouring billions into the hands of politicians in foreign lands, but cannot afford to meet the needs of just plain folks at home.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. W. E. Coffman, president of the Novelty Advertising Co., one of my constituents in Coshocton County, Ohio, the contents of which I believe are worthy of consideration by my colleagues:

THE NOVELTY ADVERTISING CO.,
Coshocton, Ohio, April 25, 1960.

Congressman ROBERT W. LEVERING,
House of Representatives,
Washington, D.C.

DEAR MR. LEVERING: Thank you very much for your response to my letter concerning the Scripto decision in the Supreme Court. It may interest you to know that today Senator YOUNG seemed to concur in the opinion that some legislation should be enacted to settle this problem once and for all. He suggested that he was going to discuss it with his colleagues on the finance commission and that the efforts may bear fruit.

However, in today's mail it was particularly interesting to have your bulletin of April 20 concerning the Mutual Security Act of 1960 and your thoughts on foreign aid. May I add my nickel's worth? As you may know we just completed a tour of the Mediterranean area covering 14 or so nations starting at Casablanca, going clear around the Mediterranean, up to the Black Sea to Constantsa, Odessa, and Yalta and returning by the way of Greece, Yugoslavia, Italy, France, Spain, and Portugal. I am quite mindful of the taxpayers' burdens in this country and how I have complained bitterly about the unfair tax structure. At one time you may recall that I proposed to Harry McGregor or to you that anyone traveling abroad should be permitted to deduct that money spent in those countries against our foreign aid program and take it from his income tax. This made sense to me because the taxpayer himself can give foreign aid directly and put it where he wants it and see where it goes, and with every dollar spent abroad by an American tourist reconciling with his income tax return can be that much contribution to foreign aid. That's the type of foreign aid they want—they do not want charity. They want the opportunity to work for a living by their crafts and to sell their products. Most nations are proud just as most people are proud in not accepting charity and your comments about too much money is well taken.

As you might suspect, I questioned everywhere I could concerning American relations with the countries we visited, talking with the people (or those with whom I could talk) trying to feel how our foreign policy is accepted. I must admit in my own humble opinion if war were to break out in any of the countries we visited through the Mideast and around the Mediterranean we would have trouble finding an ally. We certainly have not made friends with our money. Sometime when you are here, I should be very happy to give you some of these thoughts which would take too long in a letter but succinctly I have stated the impression that I gained from our recent 2 months' cruise.

Furthermore, it makes it pretty tough on American tourists because there is the false impression that every American is a millionaire and they purposely raise prices as soon as they see a Yankee face. Certainly I believe "I am my brother's keeper" but there is nothing that says forever, and so long as we pour our dollars over there and are stupid enough to do it, they are not coming on the floor of Congress to tell us to stop foreign aid.

Another paradox: Our Nation is a great advertising nation. We can advertise our products and sell impossible articles to impossible people but we don't seem to be able to sell America to the Europeans and while every foreigner will recognize an American dollar and accept it, that is about as far as it goes. They have no conception of our tax structure and how hard people do work in this country to create wealth and keep that dollar and I am sometimes fearful that the people in Congress have about the same attitude. I firmly convinced that our foreign aid policy should be completely revamped, that a very thorough practical study should be made in this type of expenditure and sift out the actual need from the open palm. I have a peculiar impression that many of the people in Europe are better off than the people in the United States. Since I was there in 1953, the contrast is remarkable. Most of the people seem happy, well clothed, well fed and industrious; except for northern Africa and Egypt there was no visual evidence of want in any of these countries. With things progressing as they are it wouldn't surprise me any day that the United States will need some foreign aid. Certainly I would welcome some tax relief right now.

Let's think about U.S. citizen aid first. We aren't the wealthiest nation in the world and I dare say you would be willing to trade our national debt with any other nation in the world. I don't know why people think America is so rich. I must admit we certainly have some cock-eyed thinking going on in our country today. Do you agree?

With kind best wishes,

W. E. COFFMAN,
President.

P.S. Nothing thrilled me more than to see signs in countries where we had given relief reading "go home Yankee." I should make a speech some time.

East Faces Prospect of Losing Representation on the Federal Power Commission

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. BOLAND. Mr. Speaker, I am disturbed by reports that the administration will soon make two new appointments to the Federal Power Commission that will have the effect of stripping the gas-consuming and industrial East and Northeast from representation on that important regulatory agency.

The New York Times in an excellent editorial today points out that if Commissioner William R. Connole, of Connecticut, is replaced by the President, the Federal Power Commission "will have not

single member from the populous urban gas-consuming areas east of the Mississippi."

I think that Members of the House and the Senate from the States east of the Mississippi should be concerned about the possibility of having a Federal Power Commission not composed of proper regional representation.

The natural gas transmission line companies have already received several rate increases. Any prospect of further increases can have damaging economic effects upon the already hard pressed industrial sections of the Northeast, where both consumer and manufacturer will in the end wind up paying higher gas rates to the local utilities. All of the rates increases in the past have been passed on to the ultimate consumer.

The Farmers Will Remember

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit the following editorial from the Indianola, Iowa, Tribune. The editorial was reprinted in the Tuesday, April 19, 1960, edition of the Algona Upper Des Moines, Algona, Iowa. Entitled "The Farmers Will Remember," this editorial comments on the recent past history of farm legislation and cites statistics evidencing the drastic downtrend in the general farm economy.

The editorial follows:

THE FARMERS WILL REMEMBER

If the tone set by GOP national chairman, THRUSTON B. MORTON, at his speech in Des Moines recently is echoed throughout the rest of the election year by his fellow Republicans, Democratic victory in the Midwest will be a great deal easier than even the most ardent Democratic supporters would believe possible. Mr. MORTON is not only the chairman of the Republican Party, but he is also a Senator from the State of Kentucky, and as such he should be pretty well aware of the legislative history, past and present, of the farm problem.

Indications are that the GOP will make every effort to shackle the Democratic Party with complete responsibility for the tangled shape of farm affairs. Mr. MORTON did this by pointing out that the Democratic Party has controlled Congress since 1955, and that it is Congress that must write any farm legislation. What was not pointed out was that the Congress of 1955 through 1958 followed, to a large extent, the programs and recommendations of Secretary of Agriculture Ezra Taft Benson and President Eisenhower. It was not until the last couple of years that Congress, under Democratic leadership, took off in its own direction in an effort to come up with a solution to falling farm income and growing grain surpluses, and then five of their efforts met with Presidential veto. In spite of the fact that both Houses of Congress have been under Democratic control for the past 6 years, it is impossible for the Republican chairman to repudiate responsibility for lack of progress toward a workable farm policy. Lack of administrative leadership, plus the ever-present threat of the veto, has been of little help to the miscalculations of the Bensonites. In choosing to stand by Benson, instead of searching for new leadership in the farm field, the GOP has accepted responsibility it cannot easily shed for election-year convenience.

The Midwest voters in 1960 will remember GOP election year promises of 4 and 8 years ago. They will remember that the GOP promised farmers parity—up to 100 percent—and prosperity. The Republican Party, according to its platform, "is committed to a program for agriculture which creates the widest possible markets and highest attainable income for our farm and ranch families." The voters will recall these things under the knowledge that now, after almost 8 Eisenhower years, there are an estimated 8 million people in farm families currently living below the accepted poverty line. Over 3 million people have been driven off farms in the last 7 years. Millions of other farmers are struggling to keep their heads above water in a losing battle between lower prices for farm products and higher farm costs. Ezra Benson has spent $33.3 billion on farm programs in 7 years, compared with $12.5 billion spent for farm programs under President Truman. From 1952 to 1959 farm prices were down 20 percent, farm income was down 34 percent, parity ratios dropped 23 percent and the farmers' share of the food dollar decreased 19 percent. During that same period of time farm distress sales increased 27 percent, farm surpluses rose 636 percent, farm production expenses increased 15 percent and farm debt was up 43 percent. The farmers have a lot to remember.

In this election year the Democrats will be proposing some sort of a farm bill. It may work or it may not. It may be acceptable or it may not. But there will be a proposal of some kind, one that the voters may study. Against this it appears that the Republicans will be content to defend Benson and his program, and attempt to cast blame for present poor farm conditions upon the Democrats. If such is the case, it is not hard to know where the farmers' votes will go in November.

Wisconsin Electric Cooperative Resolutions

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD eight resolutions adopted by the delegates to Wisconsin Electric Cooperative's 24th annual meeting, at which I spoke on March 28 in Madison, Wis.:

WISCONSIN ELECTRIC COOPERATIVE RESOLUTIONS

TAX LIABILITY OF PATRONAGE REFUNDS

Whereas it was the intent of Congress in passage of the Internal Revenue Act of 1951, to provide that cooperative associations distributing to their patrons margins over and above the cost of rendering service in the form of cash or noncash patronage credits, should be taxable to the patron to the degree that they constitute taxable income, at par in the year received; and

Whereas the Internal Revenue Service has seen fit to abide by lower court decisions holding that patronage refunds in a form other than cash is not income to the recipient unless shown to have a definite market value: Now, therefore, be it

Resolved, That we urge the Congress to adopt or enact appropriate resolution or legislation declaring it the sense of the Congress that the original intent of the Internal Revenue Act of 1951 regarding the tax liability of all patronage credits of cooperative associations be abided by, so that such credits constituting taxable income be taxable to the recipient at par in the year received.

POWER SUPPLY

Whereas production and transmission expense is the largest single increment in the delivered price of electric energy to the ultimate consumer, representing from one-third to over one-half of the expense of supplying electric power; and

Whereas the technology of producing and transmitting electric power lends itself most economically to large, integrated operation; and

Whereas long experience has shown that an independent distributor of power has very limited bargaining power in seeking the most favorable rate in purchasing wholesale power due to unavailability of competitive potential sources; and

Whereas there is ample evidence that independent distributors can join together to combine their bargaining power either for the purpose of seeking the most favorable possible wholesale power rate, or to pool their requirements to feasibly produce and transmit their individual power requirements jointly; and

Whereas in the State of Wisconsin, Dairyland Power Cooperative provides demonstrative evidence of the great benefits to the ultimate consumer achieved through joint control of energy source; and

Whereas also in the State of Wisconsin the Badger Power Cooperative provides demonstrative evidence of the great benefits to the ultimate consumer actually achieved through joint bargaining to achieve the most favorable possible wholesale power rate; and

Whereas the advancing technology of power production and transmission is melting away handicaps imposed by distance between load centers of cooperating power distributors to increase the feasibility of even greater degree of joint cooperative effort to the ultimate advantage of our consumers: Now, therefore, be it

Resolved, That we delegates recognize the increasing importance of joint cooperation in this field among our respective distribution cooperatives to the advantage of ultimate consumers, that we commend Dairyland Power Cooperative and Badger Power Cooperative organizations as vital to the future of the program in this State, and that we urge even greater effort on the part of directors and management of these organizations to maximize their effectiveness in behalf of our program; and be it further

Resolved, That we urge each of our member systems to actively affiliate in joint effort for this purpose with a continuing program of research and study, and where feasible, in actual bargaining, as representing the best long-range approach in the interests of our rural electric patrons.

ASSOCIATED ORGANIZATIONS

Whereas it is our firm conviction that the rural electric and telephone programs in Wisconsin have benefited greatly from the assistance of a number of general cooperative associations in their efforts to broaden public and patron understanding of the fundamental objectives and achievement of cooperative action; and

Whereas by working closely and in joint membership with other cooperative groups in these associations, we can contribute substantially to their effectiveness and en-

hance their ability to promote the objectives of the electric and telephone programs; and

Whereas we particularly are cognizant of the contribution of the Cooperative League of the U.S.A., and its Executive Secretary Jerry Voorhis for its work nationally and of the Wisconsin Association of Cooperatives and its executive secretary J. K. Kyle; and

Whereas Wisconsin Electric Cooperative is a regional member of the Cooperative League, and WEC and each of its member electric cooperatives is a member of the Wisconsin Association of Cooperatives: Now, therefore, be it

Resolved, That we delegates take official cognizance of the effective representation and activities of the Cooperative League of the U.S.A. and of the Wisconsin Association of Cooperatives and their effort in behalf of cooperative action, and that we commend their management for their close cooperation in behalf of our specific objectives in the rural electric and telephone programs.

JOB TRAINING

Whereas skilled employees operating under the discipline of strictly enforced safety rules to provide safest possible working conditions in a continuing job training program are essential to the well-being of electric and telephone cooperatives both in terms of quality of service and in the well-being of our employees and their families; and

Whereas we recognize that the greater an employee's understanding of what and why he is doing, the more satisfied and skilled is his performance; and

Whereas any accident can and will be avoided where the cooperative provides as a basic part of its program specific rules to enforce, and incentives to promote, the use of safety hats, rubber gloves, protective grounding and pole inspection; and where good working habits are continuously encouraged; and

Whereas it is estimated that the direct accident cost for the rural electric cooperatives in the Nation each year amount to $2,400,000 plus such indirect or uninsured costs as disruptions of service, adverse local publicity, possible reflections of managerial capabilities and others; and

Whereas with the valued cooperation of the Wisconsin Department of Vocational and Adult Education, our Wisconsin REA job training and safety committee has developed for our Wisconsin systems an excellent training and safety program for our employees, but that this is only a foundation upon which well-trained employees working under safest possible working conditions must be developed under local management policies which recognize the vital importance of this effort: Now, therefore, be it

Resolved, That we commend the Wisconsin REA job training committee and the department of vocational and adult education for their effective efforts in this field and that we urge their continuing reappraisal of this program with the aim of securing near-perfect cooperation from the board of directors and management of each participating system, with the aim of seeking continuing improvement in the program, and for the purpose of maintaining a constant awareness and vigilance on the part of employees, directors, management and patrons of the inherent dangers of even momentarily letting down our guard; and be it further

Resolved, That we recognize the very great improvement during 1959 in our overall State safety record as a result of increased effectiveness and cooperation, and that we urge even greater effort in 1960 to further reduce and eliminate those elements which lead to accidents.

AGRICULTURAL BARGAINING POWER

Whereas rural electric and telephone cooperatives serve in but one of the essential areas where rural people must work together to achieve a sounder local economy, more control over cost of production, increased efficiency, higher net income, lower prices for consumers and a more stable national economy; and

Whereas the stability of our service organizations is irrevocably bound to achieving these objectives to maximize productive use of our services; and

Whereas we deplore a marked and growing deterioration in the economic stability of agriculture and the resulting effects on our memberships; and

Whereas until farmer-owned cooperatives are sufficiently developed to represent combined bargaining power over broadly integrated areas sufficient to meet individual needs for credit and other essentials requisite to production, and sufficient control over marketing steps to effectively influence prices received for his efforts through ability to regulate supply with demand, he cannot and will not be able to fairly compete in an economy where other segments have achieved infinitely more refined organization, directly and indirectly as a result of governmental sponsorship or tolerance. Presently such competitive bargaining power is committed against the agricultural producer to siphon off a growing share of the fruits of the farmers' investment in labor and capital: Now, therefore, be it

Resolved, That we favor a new approach to solving the problems of agriculture encouraging on a much broader scale the formation and development of producer-owned cooperative associations, patterned after the REA method of making available the credit, technical management assistance and good will of the Federal Government, aimed at maximizing the integration of agricultural bargaining power; and we further favor enabling legislation in order that agricultural producers may effectively control the marketing of their produce to avoid uneconomic surpluses or to dispose of them in a manner which will minimize their effect on market prices in recognition that an adequate and fair return on capital and labor of the farmer is necessary to stimulate new investment and new methods to increase quality and lower unit prices; and be it further

Resolved, That we condemn national administrative policies which artificially stimulate high interest rates, we are opposed to punitive tax measures aimed at weakening or even destroying cooperative enterprise, and we deplore the wasteful expenditure of Federal revenue in unrealistic production control programs which can only serve to aggravate, rather than solve, problems of surplus production.

PUBLIC RESOURCE DEVELOPMENT

Whereas we consider it a prudent and attainable goal to seek abundant supply of electric energy at vastly reduced rates to stimulate full use by our citizens of an increasing number of adaptations of electric power to increase efficiency and living standards; and

Whereas the rate at which our population is able to adapt energy to more uses will dictate, more than anything else, the maximum development of all segments of our economy; and

Whereas the inclusion in multipurpose development of our natural resources the harnessing of the resulting hydropower potential in such vast quantity that it can be made available for public use at the very lowest feasible rate while amortizing the full use of public credit is in the national welfare; and

Whereas the Hoover Dam is a typical demonstration of the validity of this point as illustrated by the recent announcement that while the Federal Government has invested $175 million in it, gross receipts already have reached $7½ million in excess of the investment; and

Whereas the Nation's commercial power companies have illegally utilized "captive funds" of their customers in a misguided and misleading multi-million-dollar advertising campaign aimed at maximizing their profits by achieving exclusive and rigid control of all the Nation's power production facilities: Now, therefore, be it

Resolved, That we hereby reiterate our support for a vigorous program of prudent and well-planned resource development and we deplore any compromise of such a policy dictated by the self-interest of any special group; and be it further

Resolved, That we support full enforcement and compliance with rules and regulations of Federal and State regulatory agencies which prohibit commercial power companies from charging the expense of misguided and misleading advertising campaigns which are, in fact, aimed at influencing legislation and, therefore, cannot be considered legitimate expenses incident to the conduct of their business, and properly should be paid for by stockholders.

EXCISE TAX ON LOCAL AND LONG DISTANCE TELEPHONE CALLS

Whereas as an emergency source of additional revenue during the Korean war the Congress enacted a 10-percent excise tax on local and long distance telephone calls;

Whereas President Eisenhower has recommended that the Congress reconsider legislation enacted last year eliminating this tax on local service effective June 30; and

Whereas in voting to discontinue this tax the Congress recognized that telephone service today is not a luxury, but a necessity, particularly in our rural areas; and in recognition that it is a regressive tax due to its ad valorem nature because cost of service is higher in rural areas of least density and greatest exposure to the elements, consequently subjecting subscribers in areas where good telephone service is most important and most costly to greater tax burden: Now, therefore, be it

Resolved, That we congratulate the Congress on its action in eliminating this tax and express our conviction that it should be permanently discontinued.

TAX POSITION OF WISCONSIN'S RURAL ELECTRIC COOPERATIVES

Whereas both the Milwaukee Journal and the Wisconsin State Journal have seen fit in the past week to print editorial attacks on the tax position of Wisconsin's rural electric cooperatives; and

Whereas an untrue picture of total power sales at retail to our membership is achieved by combining sales at wholesale with sales at retail to achieve a stated gross revenue figure far in excess of actual sales to ultimate consumers; and

Whereas the picture is further distorted by deducting approximately a quarter million dollars paid by our cooperatives' purchasing power at wholesale from commercial suppliers, and crediting these tax payments to the commercial utilities even though they are a definite increment in taxes paid by electric cooperatives' patrons; and

Whereas in neither case do these publications reveal to their readers the obvious facts proven by studies of the Wisconsin Public Service Commission that commercial utilities average more than 10 times as much revenue per mile of line constructed, and that commercial utilities in Wisconsin serve nine times as many consumers per mile of line constructed, and that over half of all utility revenue is realized from power sales to industrial and commercial customers in areas where electric cooperatives are forbidden by law from serving; and

Whereas based on any fair comparison, our electric cooperatives pay a full share of taxes to the State tax units, and that our taxes are based on a formula which increases their

total at a rate which has caused, and continues to cause them to double at least every decade: Now, therefore, be it

Resolved, That we delegates reiterate our position that our electric cooperatives by any fair appraisal are meeting their full responsibility in regard to providing necessary revenue revenue to Government; that our electric cooperatives are serving exclusively in areas where existing industry refused or could not serve because potential revenue wasn't considered adequate to make service a profitable investment, and that our electric cooperatives are meeting a need in areas where the alternative was that a very substantial percentage of our rural people would otherwise have been forced to continue to live in darkness.

Pollution of San Francisco Bay

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. COHELAN. Mr. Speaker, over a period of years the regional water pollution control board in San Francisco, Calif., has been conducting a drive in cooperation with communities around San Francisco Bay to halt pollution of this major body of water. However, the Federal Government has not yet moved to halt the dumping of raw sewage directly into the bay from military bases at Benicia and Treasure and Yerba Buena Islands.

In the Military Construction Acts of 1959 and 1960, the House of Representatives has seen fit to authorize sewage treatment facilities at both Benicia Arsenal and Treasure Island Naval Station through amendments which I myself authored. Now the question of appropriations for these two all-important projects is about to be taken up by the House Appropriations Subcommittee on Military Construction.

So that all Members of Congress may be advised of the interest in these projects which exists in the State of California, I submit for the RECORD the following joint resolution of the Assembly of the State of California:

ASSEMBLY JOINT RESOLUTION 5

Joint resolution relating to pollution of San Francisco Bay waters by Federal installations

Whereas two military bases in the San Francisco Bay area, the Benicia Arsenal and Treasure and Yerba Buena Islands, are still dumping raw untreated sewage and waste directly into Bay waters, which is causing pollution of these waters; and

Whereas the regional water pollution control board for the San Francisco Bay region and other agencies have attempted to bring about correction of this problem since 1951; and

Whereas the Benicia Arsenal problem could be solved by the arsenal connecting with the sewage treatment plant built by the city of Benicia, which was built far in excess of the needs of that city and designed to provide treatment capacity for sewage from the Benicia Arsenal; and

Whereas this treatment facility was financed by general obligation bonds of the city of Benicia in the amount of $877,000, which was accepted by the citizens of that city as their obligation in the protection of the bay waters; and

Whereas under Public Law 660, 84th Congress, 2d session, $250,000 was granted to the city of Benicia by the U.S. Government to aid in the construction of this sewage treatment plant, yet the necessary funds to connect the Benicia Arsenal have not been made available; and

Whereas approximately $320,000 is the estimated cost of connecting the Benicia Arsenal to the city system, which is the most economical method of combating this pollution problem; and

Whereas the other installation causing pollution in San Francisco Bay is the naval installation on Treasure and Yerba Buena Islands, which is discharging 850,000 gallons of raw sewage into the bay every 24 hours; and

Whereas this problem has also been under consideration by the regional water pollution control board since 1951 and was declared a condition of pollution and nuisance October 21, 1954, in the regional board's resolution No. 161; and

Whereas approximately $700,000 is necessary for the construction of a sewage treatment plant for this installation; and

Whereas the construction of these facilities would be in accordance with and in furtherance of Executive Order No. 10014, dated November 3, 1948, which directed all Federal agencies to cooperate with State and local authorities in preventing pollution of surface and underground waters: Now, therefore, be it

Resolved by the Assembly and Senate of the State California, jointly, That the Legislature of the State of California respectfully memorializes the Congress of the United States to appropriate the necessary funds to correct the condition of pollution being created by the Benicia Arsenal and the Treasure and Yerba Buena Islands installation, with such appropriation specifically designated for such purpose; and be it further

Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

Overabundance of Food and Starving People

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. WOLF. Mr. Speaker, my friend and colleague from our great new State of Hawaii, Mr. INOUYE, has only been in Congress a short time, but he has already proven his excellent leadership ability. His record is adequate proof of the good judgment both of the people of Hawaii in sending him to Washington, and the Members of Congress in voting statehood for Hawaii.

Under unanimous consent, I insert in the RECORD the excellent speech just given by this fine new Congressman. The subject has been well handled on the item of food and hungry people:

OVERABUNDANCE OF FOOD AND STARVING PEOPLE

(Speech by Hon. DANIEL K. INOUYE, of Hawaii, before the Cooperative Food Distributors of America convention, Washington, D.C., April 25, 1960)

Mr. Chairman, the subject I am about to discuss is not a very pleasant one. Originally, I had thought of telling you about the most beautiful islands in the Pacific—the new and sovereign State of Hawaii. This would have been a very pleasant subject to discuss. However, noting that this is a convention of food distributors, I decided to spend a few moments this afternoon discussing something about overabundance of food and starving people.

About a decade and a half ago, while serving with the Armed Forces in Europe, I observed literally thousands of human beings crawling to the lowest depths imaginable, because they were hungry. I saw women offering themselves for a slice of bread. I saw husbands selling their wives in order to feed their children. I saw children soliciting for their mothers for a chocolate bar. One day, a group of people came to our campsite to offer their services for any menial or dirty job, such as cleaning our kitchens and latrines. Upon being asked what compensation they required for this work, the leader of the group replied simply, "We want your garbage." Assuming that they needed the garbage to feed their livestock, we accepted their services. A few days later, we found out that they were taking the garbage home to their small village for distribution among their people for human consumption. These people were working for the privilege of eating our garbage.

After the cessation of hostilities, I pictured our world entering into a new and glorious age of peace and plenty. I must confess that even after experiencing the horrors of war, I was still naively idealistic.

Today, while our Nation is complaining about overabundance and food surpluses, there are millions of people in our world who are actually starving. In the United States, garbage disposals and garbage pails are selling like hotcakes because of the over abundance of wasted and leftover food. While millions of dollars are being spent in the United States for reducing and diet pills, most of the world has yet to hear of these miracle pills.

Those of us who have had the privilege of traveling in the Far East know that hunger is a real problem. The hunger that I speak of is not merely the nutritional deficiency type but the deep belly type that makes children cry. I have seen thin, scrawny children covered with sores. I have seen men, women, and children beg for food. I have seen waiters set aside our leftover morsels to be sold to others in the dark alleys that evening.

We, who are gathered here today, should pause for a few moments this evening to give a prayer of thanksgiving for the abundance we are blessed with. We should be very grateful for our bountiful gifts. We should be grateful to associations, such as the Cooperative Food Distributors of America, for making this abundant food available to our households at low-cost methods of distribution. I am grateful. I hope you are.

The daily per capita calorie consumption in most parts of Asia is about a thousand calories. Most of our distinguished nutritionists state that it takes about 2,500 to 3,000 calories per day for an average person to carry on his daily activities. It should be noted that people who cannot get above the average of a thousand calories a day have little energy to build schools, to build railroads, to construct communications facilities, to work on their farms, and to defend themselves.

For example, the great nation of India has always been suffering from food shortage. Any disaster, flood, or drought, which would reduce the food supply even slightly, creates serious trouble for the Indian Government.

About a year ago, a very distinguished Member of Congress stated that "The Indians are proud people. At times they seem to us to be exasperatingly indifferent to the obvious dangers in communism. But India is a democratic government which is struggling to provide a decent standard of living for its millions of people. Economic and political unrest, caused by a widespread and persistent shortage of food, greatly complicates the difficulties of the government and could conceivably tie up the scales against freedom there.

"Whether we like it or not, there is a struggle now underway between India and Communist China. India is trying through democratic procedures to create jobs and give her people greater economic independence—the same thing China is trying to achieve through the harsh, repressive procedures of communism.

"If India fails, and China succeeds, there will be nothing to stem the spread of communism in Asia. Our surplus foods can be a significant weapon in this life or death struggle."

The world is crying for leadership and most of the people throughout this world look to our Nation for this leadership. And whether we like it or not we will not be able to escape this role of leadership in our free world. Enlightened self-interest demands that we do all we can to help other nations to become economically stronger. People who are convinced that their economic self-interest will best be served under a democratic form of government will add little, if any, sympathy for Communist propaganda.

Food has a universal language. Even the smallest child knows the meaning of food although he may have no understanding of some of the other things we are now attempting to do to retain and to win new friends at this time of danger. Military assistance alone will not stem the Communist tide. Blessed with overabundance, we should now speak this universal language of food to bring about a better living for the unfortunate and for the rest of the world.

Today there is before the Congress of the United States, H.R. 6681, a bill to promote the foreign policy of the United States and help to build essential world conditions of peace by the more effective use of U.S. argicultural commodities for the relief of human hunger and for promoting economic and social development in less developed countries through the United Nations or its appropriate agencies, introduced by the distinguished Congressman from the second district of Iowa, the Honorable LEONARD WOLF. This food for peace program as set forth in the bill provides for the distribution of some of our surplus foods through the agencies of the United Nations. The cost of this program is infinitesimal as compared to our military assistance program. All Americans who have any warmth in their hearts and who have any sense of enlightened self-interest should support this measure. Please bear in mind that it is most difficult to preach democracy to hungry people.

I hope I may live to see the day when all people will be blessed with plenty and all nations will be blessed with associations such as yours.

Aloha.

Our Economic Armament

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the New York Times of April 22, 1960, entitled, "Our Economic Armament":

OUR ECONOMIC ARMAMENT

Convinced that Sino-Soviet imperialism will continue to drive for world domination irrespective of the outcome of next month's summit meeting, the Western nations are stepping up efforts to supplement their military power with a new economic arm to meet the Communist economic challenge.

This new economic arm is to be the Organization for Economic Cooperation and Development, comprising the United States, Canada, and 18 free European nations, including some which, for practical or traditional reasons, are militarily neutral. It is to provide on a world-wide scale the same stimulation, coordination and direction of both the economic development of its members and aid to under-developed areas that the Organization for European Economic Cooperation provided for Europe's recovery during the Marshall era. Now, however, it will be on a cost-sharing basis.

A convention for this organization just completed in Paris by four "wise men," including American Ambassador Burgess, will be submitted for approval to the 20 nations with the hope that it will became a functioning reality next year. The broad framework for it was outlined by Under Secretary Dillon—whose name is being attached to the new era—in his New York speech, in which he emphasized that the West is determined to stand firm on Germany and Berlin but also stressed that this alone is not enough. Our "program of victory," he declared, must include both our own sustained economic growth and a victory over desperate proverty everywhere to show that freedom works better than Communist slavery.

To that end the new organization is to advance both free-world economy and free-world trade on a liberal, multilateral and nondiscriminatory basis to provide high levels of employment without inflation, and at the same time bridge the gap between the two European economic blocs now in danger of a trade war. To the same end it is to enlist now prosperous European nations in a cordinated move to supply development capital to the economically less advanced areas.

The aim is to provide such capital mainly by loans, both "hard" and "soft," to stimulate industrial development and to enable the peasant to own his land and keep him free from being reduced to a serf in state-owned collectives, as in Soviet Russia, Communist China, East Germany, and now Cuba. The comparatively minor cuts in the House and Senate thus far in our own mutual security program indicate that Congress is fully aware of the challenge and how to meet it.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

"A Milestone Measuring the Betterment of Human Relations," Is Topic of Address by Representative John M. Slack, Jr., at Mayor's Commission Anniversary Dinner, Charleston, W. Va.

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. RANDOLPH. Mr. President, one of the most significant events in recent West Virginia history occurred last night in the State's capital city, Charleston, where the first annual dinner meeting of the mayor's commission on human relations was held.

That important and helpful commission was created by the late Mayor John T. Copenhaver in an executive order signed June 7, 1959. Under this commission the late Mayor Copenhaver envisioned a better city wherein all its citizens might live in harmony and brotherhood, enjoying the fruits of citizenship without regard to race, creed, or national origin.

More than 40 civic, business, and professional, and religious organizations are cosponsors of the Commission on Human Relations in Charleston, and its officers and members are L. Leo Kohlbecker, chairman; Dr. James H. Walker, vice chairman; Mrs. Irenee May, secretary; John D. Smallridge, treasurer; and Willard Brown, G. E. Ferguson, Mrs. Andrew Gardner, Dewey E. S. Kuhns, William L. Lonesome, Rev. Moses Newsome, Miles C. Stanley, A. S. Thomas, Jr., Rabbi Samuel Volkman, and Houston G. Young, members.

Master of ceremonies for the April 26, 1960 event, held in Charleston's spacious civic center, was Mayor John A. Shanklin, assisted by the chairman of the commission, Mr. Kohlbecker. The invocation was by Rev. F. Elwyn Peace, President of the Charleston Ministerial Association; the prayer of the evening was by Very Rev. Claude Vogel, O.F.M.; and the benediction was pronounced by Rabbi Samuel Volkman, D.D., of the Virginia Street Temple.

Principal guest speaker for the occasion was the venerable statesman of the sports world, Branch Rickey, president of the Continental Baseball League, while other speakers included Gov. Cecil H. Underwood of West Virginia, Hon. John A. Field, Jr., U.S. district judge for the southern district of West Virginia, and Representative JOHN M. SLACK, JR., of the Sixth West Virginia District. The senior Senator from West Virginia likewise was privileged to be a guest of the commission and a participant.

Mr. Rickey, the baseball executive who first sponsored a member of the Negro race as a player in organized professional baseball, still aggressive and mentally alert at the advanced age of 79 years, spoke strongly against prejudice and expressed the belief that three major forces are working against it; namely, proximity, as exemplified by Jackie Robinson's short 6 months of proximity as a minor league player before becoming a major league regular; second, individual accomplishments by members of minority groups; and the third, religion.

Governor Underwood expressed the hope that the commission's first annual dinner meeting would be repeated each year as an event to which the people of Charleston, Kanawha County, and West Virginia would look forward with pride and satisfaction.

Judge Field spoke of the paradox inherent in the fact that a meeting is held to discuss the rights of minority groups even though it is so historically well documented that such groups have made great contributions to America.

Mayor Shanklin gave public expression to his appreciation for the accomplishments of the commission and gave assurance that its members have his wholehearted support for the manner in which they have approached the problem of how to engender good human relations.

Representative SLACK, a native of Charleston and the Member of Congress from the district which includes Charleston and Kanawha County, likewise presented enlightened remarks.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD following these remarks the text of the well-considered speech by my capable colleague, Representative SLACK.

There being no objection, the speech was ordered printed in the RECORD, as follows:

A MILESTONE MEASURING THE BETTERMENT OF HUMAN RELATIONS

(Speech by Hon. JOHN M. SLACK, JR., a Representative from West Virginia, at first annual dinner meeting of the mayor's commission on human relations, Charleston, W. Va., April 26, 1960)

This meeting of the mayor's commission on human relations comes at a critical point in our national history, and the work of this group carries a growing significance. In simple language, what you are trying to do is to establish greater mutual understanding and trust among several population elements of this community * * * to establish it by friendly persuasion and personal example. Very few human undertakings are more important to the fulfillment of our national objectives today.

There are some relationships among human beings which simply cannot be created and maintained by law, or imposed from the top down. They must be initiated and allowed to grow strong and secure from the grassroots up—in all such relationships the key to success lies in work undertaken at the community level.

Most of us, I am sure, are familiar with the phrase "equal justice under law" which is carved in stone over the entrance to the U.S. Supreme Court. That statement constitutes a guarantee of formal, legal justice for all Americans.

MORE THAN LEGAL JUSTICE

The privilege of full American citizenship, however, contemplates a gerat deal more than just legal justice. The American ideal, the way of life which has revitalized the thinking of all mankind since 1776, is based on political and social justice. When our Founding Fathers endorsed the famous statement: "We hold these truths to be self-evident * * * that all men are created equal * * * that they are endowed by their Creator with the right to life, liberty, and the pursuit of happiness" they were not simply striking out at the tyranny of a king. They were sweeping aside in one tremendous statement of belief the 3,000 years of repression and accumulated tyranny which had distorted human relationships throughout the Old World. This was a New World, as Christopher Columbus had told his Queen and they were building on new ground, with a new set of guarantees based on new values for human beings.

As might be expected, there are persons who give only lipservice to the American ideal. They stand on the legal guarantee of "equal justice under law," and strike an attitude of tolerance toward those who would translate social and political guarantees into action. I say to you that tolerance is not enough. For example, organized religion is tolerated today in the Soviet Union. Tolerance alone is personified in the sneering answer of Cain to the voice of Almighty God. "Am I my brother's keeper?" asked Cain.

WE MUST BE OUR BROTHER'S KEEPERS

The cycle of history in which we move today supplies the answer to Cain. We must indeed be our brother's keepers. If we show no interest in our brother's problems, then there is another philosophy which will gladly take over our function—an alien philosophy, dedicated to suppression of all individual freedom, to atheism, to denial of all human values except those that serve the state. The international competition to convince the uncommitted millions of the world's population grows more fierce every year. We cannot win this competition in the long run unless our service to the full range of the American ideal is wholehearted and complete, and we are unified in our march across the pages of history.

Make no mistake about it the cold war may last a century or more because the price of a hot war is now too high to pay and if it does last a century, the determining factor in the choice of philosophies by hundreds of millions of human beings will not be pronouncements by our State Department or laws passed by the Congress.

It will be the tangible results of work at the community level, whereby it becomes known to all nations that an American of any kind or degree walks proudly down the streets of an American community, and bows to no man.

A few years ago the city of Little Rock became world famous for events which cast a long shadow on the American ideal. One day another American community will become equally famous for its leadership in

the realm of finding solutions to human problems that arise among neighbors. It could be the city of Charleston, through the work of this Commission. If such recognition should come to pass, I say to you that nothing would give me greater pride in my home city and the people I have known all my life.

A century ago Abraham Lincoln told us that our country was engaged in a struggle to determine whether or not we could survive half slave and half free. Today that struggle has been expanded to a worldwide competition. For we are in a new era of empire building, and we must outclass the Soviet system before the eyes of the entire world, not only in economic efficiency and in the race through outer space, but in the creation of ever newer and stronger guarantees of human equality for our citizens.

COMMISSION'S TASK NOT EASY

The members of this Commission do not have an easy task, but when you meet difficulties, you may find some comfort in the thought that your obstacles were anticipated almost 200 years ago. Speaking of American liberties, Thomas Jefferson wrote what must be the most violent statement ever recorded by a famous American.

These are the words of Jefferson:

"What country can preserve its liberties if its rulers are not warned from time to time that this people preserve the spirit of resistance? Let them take arms. The remedy is to set them right as to facts, to pardon and pacify them. What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants."

These were the convictions of a man whoes leadership pointed our young country toward realization of what had been only a dream for centuries—government of the people, by the people and for the people. Today we believe it is possible to settle our domestic problems without bloodshed. Yet, we must not forget that tyranny is always waiting offstage in one form or another, waiting its cue to enter and offer its solution to cure injustices.

Only eternal vigilance and fearless leadership can ward off tyranny, whether at the national or local level, and no matter whether the issue be economic, social, or political. The work of this Commission, then, contributes to the strength and stature of our community, our State and our Nation.

I join you with great pride in marking your first anniversary. I extend to you my warmest felicitations, and I look forward to the coming years with full confidence that your efforts will one day be recognized as a milestone measuring the betterment of relationships among all residents of this community, no matter what their race, color, or creed.

I thank you.

Senator Randolph Delivers Forthright Address at Charleston, W. Va., on First Anniversary of Commission on Human Relations

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. JACKSON. Mr. President, a most eloquent and significant address by the distinguished Senator from West Virginia [Mr. RANDOLPH] on the subject of human relations deserves the attention of the entire Senate. The occasion for the remarks of our able colleague was the first annual dinner of the Mayor's Commission on Human Relations, at Charleston, W. Va., April 26.

As Senator RANDOLPH pointed out, the people of Charleston and their political leaders deserve the acclaim of thoughtful citizens everywhere for their endeavor to advance the values of citizenship and to establish a more just and equitable basis for human relations.

The notable event was honored also by the presence of Branch Rickey, president of the new Continental Baseball League, and the man who broke down the racial barriers in the major leagues with the signing of Jackie Robinson for the then Brooklyn Dodgers. Mr. Rickey described Senator RANDOLPH'S speech as an appealing and vigorous advocacy of human rights.

Because of its timeliness, I ask unanimous consent to have printed in the Appendix of the RECORD the speech by Senator RANDOLPH.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, AT THE FIRST ANNUAL DINNER MEETING OF THE MAYOR'S COMMISSION ON HUMAN RELATIONS, CHARLESTON CIVIC CENTER, CHARLESTON, W. VA., APRIL 26, 1960

Governor Underwood, Representative Slack, Judge Field, Mayor Shanklin, and our honor guest speaker, Branch Rickey, members of the mayor's commission on human relations and ladies and gentlemen, I am grateful for the opportunity to join with the citizens and leaders of Charleston in this endeavor to advance the values of citizenship and to establish a more just and equitable basis for human relations.

As you know, during much of the present session of Congress, a number of my colleagues and I have been engaged on another front of this common endeavor, our task being to strengthen the guarantees of certain fundamental rights. I had hoped that we might have done more. These two separate but interdependent aspects—the preservation of civil rights and the betterment of human relations—embody two centrol questions which our era presents for answer.

The first of these, expressed in part in the term "civil rights," is how to govern in a radically new world in which distance is no longer measured by a man's walking, nor time by a man's sleeping and waking. The other is how to teach men to live in this new world which is rich with novel possibilities of both creation and destruction.

BARRIERS OF TIME AND SPACE GONE

The old barriers of time and space have been torn away. The problem is no longer a local, a regional, nor even a national one. Therefore, the work that you have done and are doing in Charleston is a significant part of the larger struggle to give substance to American ideals, and to extend these ideals to the reach of people everywhere. And, just as we have learned that there will be no neutrals in the next war—if there is to be another major conflict—we have learned also that there can be no neutrals in the continuing efforts of citizens to achieve the full humanity of man.

We are often inclined to view the question of human relations in terms of a greater need for mutual respect and the need for tolerance of racial or religious or cultural diversity. But forbearance too often means mere toleration, and at best it is sometimes but a passive and a negative status. Nor does the quality of tolerance solve the moral problem confronting the understanding man when he is faced with riotous intolerence and rampant brutality.

Toleration, I believe, is not enough.

Again, we are often inclined to address the issue of human relations in terms of better group understanding. But the problem of human relations is not that of the relations of men and women as members of a group or a religious belief, but as individuals.

If a man is hurt or wounded, he is pained and he bleeds as an individual human being, not as a member of a group.

The quality of human relations is often no better between members of the same racial, religious, or cultural group than it is between members of different groups, and for the same reason.

ISSUES ARE NOT OF COLLECTIVE CONFLICT

Today the issues joined in the advancement of human relations are not those of collective conflict, but of friction between the fundamental ideas that men have about man. The overall divisions within the world have always been based upon the ideas and ideals for which men will live and die. And the great wars of the civilized world have been fought, first, over the ideas and aspirations of the church and, later, over the ideas and aspirations of the national state.

The challenge of our time is not wholly concerned with our ideas of the church nor of the national state, but about our belief in man. And this is the area where the problems of human rights and human relations are joined—where the arts of government and education are tested. or this is a struggle not only between nations, but within nations, within communities, and often even within the heart of the single individual.

To paraphrase one of America's leading poets, it is necessary to believe in man, not only as the Christians and Jews believe in man—out of love—but also as the Greeks believe in man—out of pride.

WHAT MAN IS NOW IMPORTANT

The objective viewpoint is that of believing not only in what man may become in this life or another, but in what he is now; in his fundamental worth and dignity and in the place he occupies in this world.

It is the lack of faith in the essential value of man that corrupts and weakens democracy.

It is doubt in the worth and dignity of man that opens the way to tyranny.

And it is contempt for man that causes subjugation and slavery.

Thus, the question of human relations is not primarily an issue of race relations or group relations, but, rather, is a question of the response we make to the proposition that man, merely because he is the child of our Creator, has a fundamental worth and value. Today this proposition, unfortunately, is questioned or qualified by some in the United States largely in terms of race or in terms of religion.

But this has not always been so. In times past, it was qualified by some in relation to one's national origin—Irish, Italian, Polish, et cetera—or whichever was the most recent immigrant group. Earlier, the qualification had reference to the form of worship which one professed. Roger Williams, history will verify, removed himself to the wilderness of Rhode Island in order freely to assert the fundamental right of every man to his own form of worship.

The history of the American ideal has thus been to advance the fundamental belief that man—as man—is a creature of worth and dignity and that all men—as men—partake of these qualities.

The essential human characteristics which we cherish are in all men and women, and

we can no more create an aristocracy of human dignity than we can create an aristocracy of human love or human imagination or any of the other essential human characteristics.

Thus, ladies and gentlemen, the challenge of bettering human relations is one of instilling in our hearts a renewed belief in the humanness of all mankind.

Distinguished Service Award to Hon. A. L. Miller

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. WEAVER. Mr. Speaker, with real personal pleasure I am happy to report to my colleagues that the Department of the Interior has just recently given splendid and richly deserved recognition of a long and outstanding career of public service compiled by a former Member of the House of Representatives.

For 16 years Dr. A. L. Miller ably represented the Fourth Congressional District of my home State of Nebraska. He is now serving with distinction in a difficult and challenging assignment as Director of the Office of Saline Water. In well-deserved recognition of his leadership, example, and administrative accomplishments to successfully expedite and accelerate this vital program, he has received Interior's highest honor, its Distinguished Service Award.

I know that all the Members of the House of Representatives, his many friends and acquaintances, join with me in congratulating Dr. Miller.

Under unanimous consent I include in the RECORD the citation which accompanied the award:

THE SECRETARY OF THE INTERIOR,
Washington.

CITATION FOR DISTINGUISHED SERVICE—ARTHUR L. MILLER

In recognition of more than 20 years of public service, and for outstanding administrative accomplishments as Director of the Office of Saline Water, Department of the Interior.

Dr. Miller was appointed Director of the Office of Saline Water in February 1959. In this position he is directing, under the supervision of the Secretary, a vitally important research and demonstration plant program for the development of low-cost processes for converting saline water, both sea and brackish, to fresh water. Through his leadership he provided the program with a new sense of purpose and direction, accelerated the pace of research and development, instilled enthusiasm among the staff, obtained the cooperation of public and private organizations, and created an improved understanding and appreciation for the program objectives in the public mind. Dr. Miller streamlined the administrative procedures for the program and effected a reorganization of the Office to carry on the basic research program and meet the demands of the recently enacted demonstration plant phase of operations. On the basis of his recommendation, the selection of processes for saline water conversion demonstration plants was completed by the Secretary ahead of a severe schedule set forth by the Congress in the authorizing legislation. Site selections have also been accelerated under conditions of utmost priority and widespread competition among the States and communities. Dr. Miller was instrumental in obtaining cooperative agreements with several States and concluded an agreement with the Atomic Energy Commission for a joint nuclear reactor-saline water conversion project. Prior to his appointment as Director, he served with the Nebraska Unicameral Legislature, and as the Nebraska State health director. On November 3, 1942, Dr. Miller was elected to the 78th Congress of the United States and was reelected for seven additional terms. He served on the Public Lands Committee and the Interior and Insular Affairs Committee of the House. In recognition of his splendid contributions to the Office of Saline Water and to the Department of the Interior through his leadership, example, and enthusiasm, Dr. Miller is granted the highest honor of the Department of the Interior, its Distinguished Service Award.

FRED A. SEATON,
Secretary of the Interior.

The Navy Subchaser

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. JOHNSON of Texas. Mr. President, there have been many great stories written about the heroic exploits of the U.S. Navy in World War II. Now a new book has been added to that lengthy list. In my opinion, it is one of the greatest.

This book was written by William Edward Syers, a very good friend, a great Texan and a true citizen.

As a former executive officer of a subchaser, Ed Syers has written of things he knows and loves—ships and the sea and the U.S. Navy. Specifically, he has brought to the reader in vivid words an unforgettable picture of life in combat aboard a World War II subchaser.

In recognition of this book's assuming its rightful place among the great publications chronicling the history of World War II, I ask unanimous consent that a review of the book, "The 'Seven': Navy Subchaser," be printed in the Appendix of the RECORD.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

THE "SEVEN": NAVY SUBCHASER

(By Don MacCracken)

This is the story of the World War II navy subchasers and the men who manned them, an almost forgotten breed, according to the author, William Edward Syers. Mr. Syers has combined experiences, some personal and some secondhand, to come up with an honest, interesting, highly readable and oftentimes exciting yarn.

The story line concerns Lt. (jg.) Samuel D. Chance, who leaves his family to become the executive officer of a subchaser, shortly after the bombing of Pearl Harbor. His first assignment is in the Caribbean and subsequent assignments take him, the crew, and the ship, to and beyond Pearl Harbor and through hurricanes, U-boats and a fight to the finish with the Japanese on a Pacific atoll.

The people and their emotions are real and, for the most part, the incidents are recorded in actual accounts of the war.

It is during the episode with the Japanese in the Pacific that the book reaches its peak in excitement and suspense. Although humorous incidents help ease the tension, anyone who has read a book or seen a movie of this type will find Mr. Syers' descriptions just a little more realistic and exciting than any of the others.

A pursued Japanese submarine seeks refuge in a lagoon, the *Seven*, trying to kill her, runs aground. There are Japanese troops on both sides of the narrow inlet, armed with mortars. In the still of the night, after the crew of the chaser have jettisoned everything, including most of their fuel, in order to lighten the ship, the Japs begin to sneak out in small boats and canoes. The unorthodox methods used by the crew to repel the invaders as they begin to board the ship is an example of truth being stranger than fiction.

Not necessary to this story of men fighting a common enemy, the sea, while trying to destroy each other, is the standard "other woman" gambit. The romance seems mechanical; indeed it is the only part that reads like fiction. Hasn't Sam Chance enough to worry about without a beautiful woman, not his wife, who chases him from New Orleans to Honolulu, thus depriving him of "a woman in every port"? This episode, unfortunately, has become a cliche in Navy books. The book could well get along without the tragic love affair. But when Hollywood buys it for the movies, and it probably will, canned romance becomes a necessity.

In summing up: a good, honest book about a little-known part of the Navy. Highly readable with plenty of excitement toward the end. Mr. Syers is proud of the Navy subchasers he knows so well—and he doesn't hesitate to reveal this in his writing. Tends to make you proud of them too.

America's Rendezvous With Destiny

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. HUMPHREY. Mr. President, a fine young man from Eveleth, Minn., Patrick McDonough, delivered an excellent address entitled, "Our Rights and Responsibilities Under the Constitution" to take first prize in the region 9 contest of the 1960 American Legion high school oratorical competition.

This is sharp competition and to be the winner is an honor. We are very proud of Patrick McDonough and I respectfully suggest that my colleagues read this fine speech.

Mr. President, I ask unanimous consent that this prize-winning speech be printed in the appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR RIGHTS AND RESPONSIBILITIES UNDER THE CONSTITUTION

(By Patrick McDonough, Eveleth, Minn.)

"To some generations, much is given. From some generations, much is expected.

This generation of Americans has a rendezvous with destiny."

These stirring words by Franklin Delano Roosevelt were not spoken of our generations. They were spoken of our fathers, many of whom fought, and some of whom died, to preserve the rights and privileges given to us in our Constitution.

But they might have been said of us, not because we shall be called upon to die on foreign soil, we earnestly pray that that will not be true, but because we have a responsibility toward our Constitution, as grave and as important as any that our fathers faced.

Most of us know the rights granted to us under our Constitution. We learn them in every history and civics class. We see them demonstrated as free people go to vote. Our forefathers were very generous in delegating and very careful in protecting the rights of American citizens of all time. These are the privileges given to us. But, along with these rights and privileges goes another quality, the quality of responsibility toward the Constitution and all that the Constitution represents.

It is a sad thing that many of us ignore or neglect these responsibilities. And the worst thing about that indictment is that it is not only the professedly bad citizen who is guilty of it. It is millions of our good and respected citizens. It is all of us who neglect to vote, or to take interest in the affairs of our community, our State, and our Country.

In a Democracy, people get exactly the type of government they demand. If we take no interest, if we demand no pledge of integrity from our candidates, no proof that these candidates love, respect, and hold up the ideals of the Constitution, we stand in danger of forfeiting the rights which our forefathers willed to us.

If, on the other hand, we demand from our public officials honesty and love of our country with its guiding document, we will get just that. To make these demands is one of our responsibilities to our Constitution. But this responsibility, shared by voters, has to be taught and learned. It has to be taught to future citizens while they are in the impressionable stage. It has to be learned at home.

I believe that most of our high school citizens fully intend to live up to our responsibilities as future adult men and women. We're burning with desire to cast our votes in the way which to us best aids our Government. It is only after we become mature men and women that this desire may lessen and pall, as it has lessened and palled for our elders. We hope this will never be true, but, unless school and home and the high school citizens, themselves, understand and respect the Constitution, there is danger.

Let me give some examples of this danger. In 1959, 350,000 students in high schools throughout the United States indicated by long, strenuous hours of work that they believed in our Constitution, that they cherished its rights and accepted its responsibilities. But, occasionally, someone came up with a very different idea than the 350,000. For instance, a boy of our community walked into the same high school classroom in which I prepared this talk, with the same purpose in mind, that is, a speech on the Constitution of the United States.

As I have indicated, his idea was different, however. He thought that the Constitution of the United States had outlived its usefulness, that it was old-fashioned, outmoded, and should be abolished. It was his idea that there was nothing in the Constitution of value to the modern world. It was his idea that a new order should replace the ideals of our Constitution.

When the instructor showed some amazement at his attitude, and said, "Why, Bob, you don't mean that you'd like to see our Constitution abolished, do you?" he answered with a sneer, "If you want someone to praise this 150-year-old antique, you'll have to get yourself another boy."

Bob did not realize that in answering as he did he was practicing one of the basic rights given him under the very document at which he was sneering, the right of free speech. He did not stop to think what would have happened to him had he dared to express himself in such a way under the ideology he was upholding. He did not understand that he was using the right given to him by the careful framers of the Constitution to try to destroy the very source from which the right came. He did not analyze the fact that he was accepting the privilege but rejecting the responsibility to protect that right and to pass it on to future generations.

Now, since Bob had been subjected to the same education as the rest of the 350,000 of us, it would seem that there must have been something about his home environment which did not teach respect for our Constitution and our way of life.

In the Soviet Union, we find democracy and liberty sneered at in school; perhaps, in the secret of the home, some parents may teach their children to strike for freedom, if the opportunity ever comes. In the United States of America we find democracy and liberty taught in school; perhaps, in the secret of some homes, parents may teach their children to strike at the Constitution, if the opportunity ever comes. We must constantly be on the alert for this danger.

Then there are others of us whose defiance does not run as deep as to threaten the Constitution, but who defy it, nonetheless—we Bobs who demand so many rights in school and accept none of the responsibilities. "You can't prove I did it. And, as long as you can't prove it, you can't do anything to me. I know my rights."

This, in the student's way, is hiding behind the privileges granted in our Constitution: "A man is innocent until he is proved guilty."

And it is not only students who do this. We are all well aware of the abuses of the Bill of Rights practiced by criminals and acknowledged Communists. "I will not answer on the grounds that it may tend to incriminate me. I invoke the fifth amendment of the Constitution of the United States." The situation has gone to such lengths that even the comic strips are trying to point out the dangers. The criminal, or the acknowledged Communist, of course, will not change. But, perhaps, the Bobs of our high schools will, if their understanding is deepened.

Then there are other "Bobs" among us, we "Bobs" who cause so much useless slaughter on the highways, and when the law comes toward us, claim our "rights as juveniles," never thinking of our responsibilities as law-abiding minors. There are the "Bobs" among us who destroy property and call it a boyish prank.

In contrast to the Bobs among us, let's discuss for a moment or two the Joes among us. Joe has graduated from high school just a few months ago, and is serving the U.S. Army in Korea. It's pretty miserable in Korea during this time of year. While we sit at home watching the late show, Joe may be standing guard duty in the bitterly cold Korean night. And just who is he guarding?

That which meets the eye certainly isn't very impressive: a foxhole, made just a little more comfortable by 6½ years of post-truce occupation, one of those craggy Korean ridges which seem to disappear into a mire of rice paddies. This is what we see with a young American soldier taking the responsibility of defending it.

But there are some things we don't see. Somewhere on those frozen paddies is another sentry. He is watching, too. He is watching Joe—watching for Joe to show some sign of inattention, of drowsiness, watching and waiting for a chance to kill. For although the fighting in Korea has stalemated, the war is far from over.

Why is Joe engaged in this silent duel of death?

His mother will give you a very realistic reason: "He was drafted." His commanding officer will tell you it's because we must not lose another yard of free world soil. Joe, himself, may dismiss the whole question by saying it was his turn for duty.

In their various ways, all of these people, Joe's mother, Joe's commanding officer, and Joe, himself, are saying the same thing: "We must take seriously our obligation of responsibility toward our Constitution and its guaarntee of liberty and justice for all."

Is the vast majority among our generation going to "Bobs" or are we going to be "Joes"? If we are going to be "Bobs," then somehow our home environment is wrong, our high schools are failing, our churches are not meeting their challenge; we are heading for complete terrorism.

But I believe that most of us are "Joes" willing to stand guard in Korea or Lebanon or Quemoy.

And the "Joes" who are in the majority must convince the "Bobs" who are in the minority that we must assume our responsibility toward the Constitution as well as to demand our rights from it.

How can we do that?

Certainly, not by loud arguments. Surely, not by fist fights in the school halls. Such tactics would only make irresponsibility and resentment worse.

We must prove it by becoming the leaders rather than the followers. We must prove it by being examples of living resistance to the ideas of the irresponsible. We must prove it by making irresponsibility socially unacceptable.

Yes, the fight for the principles of our Constitution goes on everywhere—in school and outside of school—all the time. It will continue to go on, abroad and at home, for it will be fought not by force of arms but by example and conviction.

Our example and our conviction will not be wasted, if they are zealous enough. For, if our example is good enough and our conviction strong enough, the thought will grow and develop in the minds of the "Bobs" among us.

Once the idea is there, it can never be driven out, not by evil propaganda, not by tyranny, not by the threat of oppression. For no good principle can ever be killed by force. No worthy and honest ideal can ever be murdered. The truth of this was demonstrated by the cold, hungry army at Valley Forge who inched forward on their bare and bleeding feet toward the goal of liberty. It was proved by young Nathan Hale, who, at 19, said, "My only regret is that I have but one life to give for my country."

It was attested by by the fervor of the French underground. These brave people believed in the same principles of liberty which our Constitution gives us; they felt their responsibilities toward those principles; and they were ready to fight for them. Even when they were cold and hungry and hunted, they were ready to fight for them. Even when their members were caught and executed, their ideals lived on.

I do not believe that America will ever need to decline if we, America's high school people, are "Joes" instead of "Bobs." That is, and must remain, the great challenge of American youth.

The Founding Fathers believed that "Bob" had the right to freedom of speech. For him and for all of us they made the Constitution a living, vital document, ready to serve the needs of liberty. But, they also believed that "Bob" must accept his honest role, along with "Joe," in defending and improving our heritage.

The whole world is watching the two ideologies, watching as that sentry watches "Joe"—watching for some sign of inattention on "Joe's" part that may give "Bob" his unthinking way. "Bob" must not destroy this 150-year-old antique.

Let them not find that sign of inattention. "Joe" defends our Constitution abroad. We must defend it at home and in school. We must defend it against irresponsibility. We must defend its rights.

"This generation has a rendezvous with destiny." The destiny is now. The rendezvous is important. The generation is ours.

The Air Force Manual

SPEECH
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. WOLF. Mr. Speaker, the first amendment to the U.S. Constitution provides that—

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof,

As you can see from this, one of the fundamental principles of the U.S. Government is freedom of religion, without interference of the State.

I would like to add a few comments on this issue of the manuals. Reserve personnel have access to the same news media that all other citizens have access to and are quite capable, I believe, of making up their own minds concerning the validity of any statement which they may hear from the pulpits of churches which they may attend.

I am sorry that the issue was ever raised and am proud to state that the leaders of the National Council of Churches that I have known have been fine exemplary men. I am glad that the Air Force Manual in question has been withdrawn.

At this point I would like to include the letter of the executive secretary of the Iowa Council of Churches, Mr. J .O. Nelson, a letter from James P. Gable, district superintendent of the North Iowa Conference of the Methodist Church, and a letter from the Reverend Thomas Applebee, of the Community Congregational Church, Manchester, Iowa:

IOWA COUNCIL OF CHURCHES,
Des Moines, Iowa, April 12, 1960.

Representative L. G. WOLF,
House of Representatives,
Washington, D.C.

DEAR MR. WOLF: My purpose in writing is to urge you to do all in your power to help keep the American pulpit a free pulpit and that the Government cease to print, publish, and distribute unvalidated material that reflects against the pulpit and the clergy. I refer more particularly to the recent Air Force manual in which statements occurred slandering the clergy by calling many of them Communists. To refresh your mind look at pages 15 to 20 of the student text, Air Reserve Center Training Manual, NR 45–0050, Incr. V, volume 7, "Reserve Noncommissioned Officers Course."

I have a profound sense of outrage at the inclusion in the above-mentioned manual of discredited and absurd attacks upon the American churches and religious institutions, and especially the National Council of Churches.

If this incident can lead us to a sound procedure of promoting free speech and free asembly in our country perhaps this type of un-Americanism (guilt by association), will come to an end. I sincerely hope and pray you will take the time to understand these matters and serve the people of Iowa making it possible for all pulpits to be free to preach liberty and truth for the truth shall make us free.

Very sincerely yours,
J. O. NELSON,
Executive Secretary.

NORTH IOWA CONFERENCE,
DUBUQUE DISTRICT,
THE METHODIST CHURCH,
Oelwein, Iowa, March 26, 1960.

Hon. LEONARD G. WOLF,
House Office Building,
Washington, D.C.

DEAR MR. WOLF: I just want to join my voice and pen with those of thousands of others in protesting the rank injustice of those ill-founded and entirely unsupported statements of that recently withdrawn Air Force manual which insisted that the American clergy, and the National Council of Churches especially, was infiltrated by communism.

We do not deny that some of the clergy may have been as faithless as have other scattered individuals in all other walks of life, both military and civilian, but I do protest the sweeping assertion, entirely without factual evidence and proof, of the manual to which I refer.

It is difficult to do much now to compensate for damage done, but we shall expect men like yourself to make it clear that, in the future, any and all who are guilty of such an offense must themselves be on trial.

With best wishes to you, I am,
Cordially yours,
JAMES P. GABLE.

COMMUNITY CONGREGATIONAL CHURCH,
Manchester, Iowa, March 31, 1960.

The Honorable LEONARD WOLF,
House of Representatives,
Washington, D.C.

DEAR MR. WOLF: I regret the malicious damage done by such groups as our Iowa DAR, the Air Force manual people, and others who slander all Christian churches when they allege that percentages of ministers in those churches which belong to the National Council of the Churches of Christ in America are disloyal or Communist sympathizers.

I think that the discerning public everywhere have long since come to recognize the kind of poison they put on their arrows and that the net result is not as great as some would imagine. Nonetheless, this irresponsible kind of criticism forces our churches to pay a heavy price of uncertainty about an issue, which at best merely clouds other issues.

If anyone seriously wishes to challenge the right of churches and churchmen to speak on public issues, he is certainly going against the great democratic traditions of our free country and denying the whole validity of our Judeo-Christian heritage.

Sincerely yours,
REV. W. THOMAS APPLEBEE.

Death of Leo W. Kirsch

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. HARTKE. Mr. President, I was shocked recently, as were all citizens of Decatur, Ind., to learn of the death of my good friend, Leo W. Kirsch. Leo Kirsch was an outstanding man. At the time of his death he was serving as postmaster of Decatur.

Leo Kirsch always had time to devote to worthy causes. He was an active member and officer of several civic organizations, including the Rotary and the American Red Cross. He devoted a great deal of time and effort to his church. Leo Kirsch was only 56 years of age. The State of Indiana and the community of Decatur have lost one of their finest citizens. However, the finest memorial which we can give to any individual is the rememberance of his contributions to a community. Leo Kirsch needs no memorial made out of marble. His contributions were many and will be remembered.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD as a part of my remarks the editorial from the Decatur Daily Democrat, which tells of Leo Kirsch's work and expresses the loss which Decatur feels over his death.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEO W. KIRSCH

The sudden, tragic and untimely death of Decatur's beloved postmaster, Leo W. Kirsch, struck the people of Decatur Thursday night and left them mute in unbelief.

As numbers of people gathered on the street, passing the information from group to group, few could really believe that it was true. More than 1,000 telephone calls were registered on the Decatur Daily Democrat-Citizens telephone company news number, 3–2171, by people verifying the fact that they had heard.

Mr. Kirsch was the son of Peter and Sophia Mutschler Kirsch. The Kirches were early settlers in Adams County, and Peter Kirsch custommade some of the first automobiles ever built.

Leo Kirsch, in the nearly 56 years of his life, the past 20 as postmaster of Decatur, has accomplished a remarkable record of achievement.

As a member of the Zion Evangelical and Reformed Church, he has served on the board of trustees of Heidelberg College, Tiffin, Ohio, been lay representative on the Michigan and Indiana synodical council several terms, a delegate to the general synod of the church representing Indiana and Michigan, and formerly served as choirmaster, while presently a member of the choir.

He was president of Rotary in the 1942–43 season, and has been song leader for many years.

Active in Red Cross for more than 25 years, Mr. Kirsch served in 1942 as disaster chairman, was cochairman of several fund campaigns, and was active on the fund-raising committees. At the present time his name

had been submitted as a candidate for National Red Cross Board membership.

Decatur is shocked and grieved at the sudden death of one of its most active friends. The community extends its sympathy to the bereaved family.

This We Believe—The Foreign Aid Issue of 1960

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. BAKER. Mr. Speaker, I should like to insert in the Appendix of the CONGRESSIONAL RECORD a very fine editorial on the subject of foreign aid which appeared in the Knoxville (Tenn.) News-Sentinel on Monday, April 25, 1960. The editorial, "This We Believe," follows:

THIS WE BELIEVE—THE FOREIGN AID ISSUE OF 1960

Since the end of World War II the United States has distributed around the world some $75 billion in foreign aid. Government is not a charitable institution. It has no right to spend money of its citizens except on what they decide and agree is in their own interest. So any realistic appraisal of foreign aid must be on the basis of what the people of the United States are getting for their money.

The main immediate benefit is advantage in the cold war against communism. Gifts and loans help other nations build military and economic strength to resist Communist aggression—from without or within their own borders.

Some of the recipients of this aid are joined with us in military alliance. Some are not. We feel that military aid, even to these neutralist nations, is justified if it helps them maintain their independence. If they are not formally committed to our side, at least they are not against us, as would be the case if the Communists took over.

The bulk of present U.S. aid is military aid given to support Allied armed forces against Red threats. It obviously should cost the U.S. taxpayer far less to maintain a Korean soldier in Korea, ready to defend his own soil, than it would to use a U.S. soldier for the same purpose. The same is true for Formosa, for Vietnam, for Turkey and other menaced countries around the rim of the Communist empire.

Economic aid goes for a similar end. Properly used, it improves living standards and thus fortifies the will to survive plus establishing the local revenues for self-defense.

Aside from that, we are a Nation devoted to liberty and justice for all people. For idealistic reasons, as well as in our own self-interest, we should not begrudge a measure of aid to underdeveloped new countries. Even without the Communist menace we probably would be doing some of this work if only to avoid chaos which is bad for us, Red or not.

In short the News-Sentinel favors and always has favored, foreign aid. But that does not mean we favor, or think the country should tolerate, the careless squandering of tax money in the name of foreign aid—or for any other reason.

There obviously has been a great deal of loose spending in this field, and some of it has done actual harm, building up resentment against "ugly Americans" who ostentatiously inflict their bureaucratic ways on alien cultures.

To repeated criticisms, over the years, International Cooperation Administration which administers foreign aid has paid scant attention. Now, two committees of Congress have investigated in the field, made specific suggestions and demanded a cleanup.

This newspaper had something to do with exposing this waste and inefficiency. Now, we think that before the country turns in disgust from an essentially worthy program, Congress and the administration must act.

The voter, in our opinion, should pay close attention to the attitude of the candidates on this issue—the intelligence and conviction with which they discuss it. This should weigh heavily in his decisions as to which of them he will support.

Commemorative Stamp To Honor American Women

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. WILEY. Mr. President, on June 2, a special stamp to honor American womanhood will be issued by the Post Office Department. The issuance of this special stamp is, I believe, a most merited and long warranted effort.

We realize, of course, that, historically, women have been a moving force in our progress. However, the role of women continues to expand as they are making ever-greater constructive, creative contributions in almost all walks of life. Today, there are more than 63 million adult women in the United States. Over 25 million of them are mothers of schoolchildren of pre-school-age children. About 22.5 million women—one-third of the Nation's workers—are making outstanding contributions in a wide variety of fields as teachers, librarians, lawyers, doctors, business owners and managers, farmerettes and farm managers, clerical workers, service workers, sales workers, and many others.

As members of organizations, too, they not only are serving professional or working interests, but they also are promotiong civic, cultural, educational, and other programs essential to our progress. A number of these include the League of Women Voters, the National Federation of Business and Professional Women's Clubs, the American Association of University Women, the General Federation of Women's Clubs, and many other fine organizations.

Unfortunately, the door of opportunity is not always open. There still lingers a prejudice against the employment of women in some capacities, even though experience may have proved them capable of doing outstanding jobs. However, I believe the Nation cannot afford to overlook this fountainhead of talent, brainpower, ingenuity and strength and genius, as we face the ever-growing challenges of the future, which require us to utilize to the utmost our manpower and womanpower.

To provide a better climate of opportunity, I believe greater effort must be made to achieve the following objectives:

First. Further eradicate the prejudice against women; no longer confine their role to so-called women's work; rather, give them ever-wider opportunity.

Second. Assure equal pay for equal work.

Third. Encourage women themselves to move farther into new fields, including science, technology, engineering, geology, physics, meteorology, and many of the other areas once thought beyond the range of feminine activities.

Fourth. Conduct further studies to help resolve the problems arising in our society out of the dual role of mother-worker.

Fifth. Encourage women's organizations to further expand efforts to improve our educational, cultural, and civic climates. As workers in such vineyards, these organizations can make ever-greater contributions in educating our people about their duties as citizens, including the responsibility of voting; in mobilizing community thinking and resources to support better schools, libraries, and public services; in utilizing their strength as organizations to inspire interest in cultural activities for the community; and in other constructive projects.

As we face the ever-growing challenges of the future, we can expect that the Nation will require, and must provide, real opportunities for the ever-expanding abilities, creativeness, and brainpower which the American woman can bring to our national life.

At this time I request unanimous consent to have printed in the Appendix of the RECORD two articles—an article entitled "Issue Stamp To Honor 'The American Woman,'" from the Milwaukee Journal of April 24, and an article entitled "Magazine Salutes Local Library Head," from the La Crosse Sunday Tribune. The latter article refers to the exemplary way in which Miss Gertrude Thurow, La Crosse's librarian, symbolizes the "new woman" in American life.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Apr. 24, 1960]

ISSUE STAMP TO HONOR THE AMERICAN WOMAN

American women will be honored by the issuance of a 4-cent stamp June 2.

According to Labor Secretary James P. Mitchell and Postmaster General Arthur E. Summerfield, the stamp is to pay tribute to American women, who contribute so much to the home and to the community as well as the business and professional world.

Postmaster General Summerfield continued: "The accomplishments of women of the United States are not only of interest

,to our country but to the women of all nations who are achieving more acceptance in the social, economic and political life of their countries.

"There are more than 63 million adult women in the United States, and more than 25 million of them are mothers of children of preschool and school age. The more than 22 million working women make up more than a third of all workers in the country."

ANNIVERSARY NOTED

The stamp will be issued to coincide with the anniversary of the U.S. Department of Labor's Women's Bureau. Robert Sivard, chief of the exhibits division, U.S. Information Agency, designed the stamp.

In the center of the stamp, against a plain background, is a sketch of a mother and a young girl with an open book before them, symbolizing women in the home. This sketch gives the appearance of being loosely pasted against a solid background. Across the top, in white Roman letters, are the words "The American Woman."

Five niches appear at the sides and bottom. Three denote contributions of women to the greatness of this Nation. To the left, in the upper portion, is a niche designated as civic affairs, featuring a building symbolizing women's voluntary organizations. There are an estimated 20 million women affiliated with 600 organizations.

PROFESSIONS HONORED

In the lower left, in another niche, denoting education, are an academic cap, a hanging diploma and books; recognizing in part the 1¼ million teachers, the principals and others in this sphere.

In the upper right, in the higher niche, indicative of arts and industry are a caduceus representing roughly a half million nurses, the skilled women doctors and medical researchers, the masks of the drama and a violin, a microscope denoting women in science and a large plant building recognizing women in industry and related positions held by women.

The denomination "4" is located in the fourth panel, to the lower right, and the wording "U.S. postage" in the final panel in the bottom center.

A total of 120 million of these stamps have been ordered in a color to be announced.

MAY SEND FOR STAMP

Collectors desiring first day cancellations of the 4-cent American woman commemorative stamp may send addressed envelopes, together with remittance to cover the cost of the stamps to be affixed, to the Postmaster, Washington 13, D.C. A close-fitting enclosure of postal card thickness should be placed in each envelope and the flap either turned in or sealed.

Envelopes submited should be of ordinary letter size and each must be properly addressed. An envelope must not be sent for the return of first-day covers and orders for covers must not include requests for uncanceled stamps. The outside envelope to the postmaster should be endorsed "first-day covers 4-cent American woman stamp."

[From the La Crosse (Wis.) Sunday Tribune, Apr. 17, 1960]

MAGAZINE SALUTES LOCAL LIBRARY HEAD

"Careers Unlimited" in the April issue of National Business Woman gives this month's salute to the librarian of La Crosse Public Library, Gertrude R. Thurow. The magazine is the organ of the National Federation of Business and Professional Women's Clubs.

The article's high point is that the La Crosse library and its two branches live right up to their name, "public."

To quote:

"Anyone who thinks libraries are dusty old mausoleums full of yellowing volumes no one bothers to read has never been to the three La Crosse, Wis., public libraries where Gertrude R. Thurow has quietly reigned as chief librarian since 1953. They reflect her basic philosophy that a library must extend its services 'beyond the walls of the library building and out into the community.'

"Her influence has been felt not only locally and in the State but at the national level as well. Because of Miss Thurow's active concern with young people, she has been appointed by the governor to work on the golden anniversary White House Conference on Children and Youth in Washington, D.C., called by President Eisenhower this year. She has previously worked on three Wisconsin Governors' Committees on Children and Youth."

The article tells further that Miss Thurow has been president of the American Library Association, and in 1959 conducted a conference session on the aging at the national convention in Washington, D.C. "Outstanding contributions to understanding through books for the aged have been made by her. A bibliography, The Best Is Yet To Be, compiled for La Crosse Library use, was listed in Aging, a publication of the U.S. Department of Health, Education, and Welfare. It has been recently presented to the State Board of Wisconsin Business and Professional Women's Federation for possible reprinting and distribution to Wisconsin BPW members."

The Wisconsin Federation cosponsored with nearly 50 other State organizations, two Governors' Conferences on the Aging Population and is now preparing the third. Miss Thurow has been active in these in addition to establishing a Committee on Aging when she was president of the Wisconsin Library Association.

As the article states, Miss Thurow "feels libraries should not be hushed and dusty monuments, but live places where people find ideas, meet and formulate action" and she really lived up to her reputation when La Crosse's only TV station came into being 4 years ago. "Miss Thurow invited station officials and engineers, the Long Lines division of the telephone company and the press, to present a public program in the main library. They explained how the station would function and serve the community, and answered questions from enthusiastic townspeople. This program later won a 'John Cotton Dana Publicity Award' from the American Library Association."

The librarian's counties contacts, by which she extends the library's service, are noted further in the magazine article:

"Miss Thurow keeps her community informed of new books and interesting library events each Saturday morning on her radio program, 'Your Library Speaks.' A meeting of minds is encouraged through adult discussion groups in the library such as the one on Great Books, and others like American Heritage, and the very popular Civil War Round Table.

"This exchange of ideas for mutual understanding and informed action using the wealth that is in their libraries is one of Miss Thurow's guiding purposes.

"Miss Thurow has neglected no part of her community. Her discussion groups and community programs are nationally acclaimed as teaching examples in a chapter in Eleanor Phinney's book, 'Library Adult Education in Action,' which is used as a textbook in library schools. She has been secretary of the Adult Education Section of the American Library Association, and is now president of the Wisconsin Library Film Circuit, Inc. She is affiliated with the Adult Education Association, has been a member of the Wisconsin Governor's Committee for the White House Conference on Adult Education, and has worked closely with the Wisconsin Commission on Human Rights.

"One of her personal interests is the preservation of historical sites and she has served as a board member of the La Crosse County Historical Society and belongs to the Wisconsin State Historical Society. The La Crosse Library is a U.S. Government Document Depository.

"Because her qualities of leadership and dedication have been felt on city, State, and national levels, Miss Thurow was designated 'Wisconsin Librarian of the Year' and presented a citation and bronze placque at the 1959 annual banquet closing the State conference of the Wisconsin Library Association at the University of Wisconsin in Madison."

Alleged Burial of Certain Surplus Equipment and Material

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. McCORMACK. Mr. Speaker, some time ago there was considerable comment in the Washington and other papers concerning the alleged burial of certain surplus equipment and material at an isolated base in northern Canada. Because of the nature of the criticism in the press I asked the Assistant Secretary of Defense—Supply and Logistics—Hon. Perkins McGuire, to give me the full facts with respect to this incident. I think it only fair that everyone interested in this matter read the full explanation which I insert herewith:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., April 19, 1960.

Hon. JOHN W. McCORMACK,
House of Representatives.

DEAR MR. McCORMACK: This is in further reply to your letter of March 23 relative to the article which appeared in the Washington Post of March 19 quoting Mr. Wren with respect to the alleged burial of certain surplus equipment and materials at an isolated base in northern Canada.

As you may know, the Crown Assets Disposal Corporation (CADC), an agency of the Canadian Government, disposes of all surplus property in Canada which is generated by that government. Early in 1950 when U.S. military bases in Canada also began to generate and dispose of their surplus property, the Canadian Government approached our Department of State to arrange for agreements whereby all sales of surplus property in Canada would be effected through the Crown Assets Disposal Corporation. Subsequent negotiations resulted in the arrangement being formalized through an exchange of diplomatic notes during April 1951. Since then, all our surplus property in Canada which otherwise would have been offered for sale by U.S. military bases there, has been referred to CADC for sale by the corporation.

The newspaper article in question is silent on the basic facts and therefore is extremely misleading and erroneous. It would lead one to believe that good usable property was being disposed of in the manner indicated. Actually, the property in question consisted of scrap materials, possibly still identifiable as basic items but in a condition so as to have potential value only for use as scrap. In his statement, Mr. Wren failed to state that the items were in scrap condition. Even though he stated that he knew of no reason for the form of disposition as alleged,

he needed only to contact an agency of his own government for the facts.

This scrap material was formally referred to the Crown Assets Disposal Corporation on September 7, 1956 and accepted for sale by CADC on September 24 1956. The property was offered for sale and purchased by Harry Freeman and Co. of North Bay, Ontario. However, CADC canceled the sale on June 19, 1958 because of failure of the purchaser to pay the balance due and to remove the property. Subsequently, it was reoffered for sale and purchased by a Mr. Cecil Creco of North Bay, Ontario. This sale also was canceled by CADC on February 12, 1959 and again the reason was the same. In both instances, the purchasers forfeited their monetary deposits.

The formal disposal agreement referred to above provides that any property which cannot be sold by the Crown Assets Disposal Corporation will be referred back to the U.S. military base for other authorized means of disposal. By letter dated February 16, 1959, the CADC authorized the destruction of this property. Most of the property was destroyed on May 7, 1959 and the remainder which consisted of scrap wood was burned on August 21, 1959. Again the article is misleading in that it infers current or recent action whereas the property was destroyed during May and August of 1959. We feel that the expense to remove this property from its location must have exceeded the expected market return since both purchasers elected to forfeit their monetary deposits rather than incur additional expense to remove the property.

It is most unfortunate that the statements by Mr. Wren reflected so unfavorably on actions by our military forces. After reviewing the facts in light of all the circumstances involved, I feel that the destruction of this particular property was entirely justified and in accord with our policy. I feel also that it met the criteria for destruction as contained in section 402 of the Federal Property Act. However, if you have any further questions or desire any other information in connection with this matter, please do not hesitate to let me know.

Sincerely yours,

PHILIP LEBOUTILLIER, Jr.,
Acting Assistant Secretary of Defense (Supply and Logistics).

The Needs of the Elderly

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. HENNINGS. Mr. President, how to assist our elderly in meeting their often times high medical expenses is a vexing problem of long standing. It is a problem which must be faced.

I have not at this time taken an inflexible position on any one particular plan. The appropriate congressional committees are thoroughly studying the various proposals and I am sure a constructive program will be presented.

Recently I sent a press report to the newspapers of my State commenting on many of the proposals before Congress directed toward aiding the elderly. The Charleston (Mo.) Enterprise-Courier printed an editorial challenging the validity of cost estimates for the Forand bill. I replied to the editorial and the editor of the Enterprise-Courier, Art Wallhausen, then wrote and printed a letter in reply to mine. I ask unanimous consent that the appropriate portion of my press report, the editorial "We Challenge a Senator," my letter to the editor and his letter in response be printed in the Appendix of the RECORD so they will be available to other Members of Congress.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE NEEDS OF THE ELDERLY

(By Senator THOMAS C. HENNINGS, JR.)

Americans are living longer and, as each year is added to the average American lifespan, the special problems of the elderly become of more concern to the entire Nation. To solve some of these problems, Congress this year is expected to make important changes in laws which apply to those older citizens who draw pensions or receive other forms of public assistance.

Medical expenses for persons drawing social security benefits would be paid in part under one plan being considered by Congress. This limited health insurance plan could be financed by an increase of only one-half of 1 percent in the current Federal payroll tax.

Removal of the age limit at which a person may be pensioned as totally and permanently disabled is also being considered. At the present time, a person must be at least 50 years old before receiving disability payments. Congress is expected to vote to remove this age restriction. If so, some 225,000 persons will benefit.

Congress is also expected to raise the minimum pension for persons drawing social security benefits. Now fixed at $33 a month, the minimum social security figure will probably be raised to about $40.

Another plan under consideration would require Federal standards for nursing homes serving the elderly. Grants-in-aid would be available to nursing homes which met these proposed standards. Another proposal would increase Federal support for housing the aged. An increase of 10,000 units a year has been suggested in public housing measures for the older person. It has also been suggested that nonprofit organizations be provided with loans for building low-cost homes for the aged. Still another suggestion calls for the creation of a U.S. Office of the Aging.

A number of pending bills would raise the ceiling on how much outside income a recipient of social security could earn. Rising living costs have been most burdensome on the elderly, and the $1,200 ceiling on earnings prevents many pensioners from working as much as they are able.

Support for revision of laws dealing with or affecting the Nation's elderly is bipartisan. Only the scope of the various programs is questioned. The aged may be sure the Congress will make every attempt to solve their particular problems.

[From the Charleston Enterprise-Courier, Feb. 25, 1960]

WE CHALLENGE A SENATOR

The current press report from Senator THOMAS C. HENNINGS, JR., outlines several plans being considered by Congress to again liberalize social security coverage.

One of these foot-in-the-door plans to finance health insurance could be financed by an increase of only one-half of 1 percent in the current Federal payroll tax.

We doubt very much whether the Honorable Mr. HENNINGS has bothered to investigate the cost of a medical-aid program for the elderly and needy. We also doubt very much whether the flat statement regarding financing the program with a tax of one-half of 1 percent can be backed up by figures based on life insurance statistics. It looks and sounds more like another sop concocted during a hectic political year to attract and hold votes.

A half dozen nations with similar plans wish to high heaven that they could rid themselves of this or similar aid plans. But the good old U.S.A. insists in experimenting—especially during a political year when the scramble for votes transcends commonsense. We defy Senator HENNINGS or anyone else to come up with facts which will support the claim that this program can be financed with a levy of one-half of 1 percent.

SENATOR HENNINGS SAYS ONE-HALF OF 1 PERCENT WILL CARRY MEDICAL PROGRAM

MARCH 17, 1960.

Mr. ART L. WALLHAUSEN,
Charleston Enterprise-Courier
Charleston, Mo.

DEAR ART: The following comments are with reference to your editorial of February 25, in which you question whether the costs of medical insurance for the aged can be provided at the price estimated by sponsors of legislation to establish such a program. Let me say at the outset that congressional study of such legislation is still in the preliminary stages, although there is a wide recognition of the need of the aged for some kind of assistance with their heavy medical expenses.

You will recall that in my press report on this subject, I reported that the costs of certain limited health insurance for the aged could be financed by an increase of one-half of 1 percent of the social security payroll tax. This is the estimate of sponsors of the Forand bill, H.R. 4700, which would provide limited hospital, nursing home, and surgical benefits for recipients of social security payments. You are quite right in pointing out that the cost estimates for such a program, which involve guesses as to the future wage levels, size of the labor force, medical prices, and utilization of medical care, are controversial. The most accurate prediction would be for the immediate year ahead. In response to a congressional request for a study by the Department of Health, Education, and Welfare of the feasibility of hospitalization insurance for social security beneficiaries, HEW Secretary Flemming estimated that the cost of the Forand bill in 1960 would be approximately one-half of 1 percent of the taxable payroll.

In hearing last July before the House Ways and Means Committee, the following exchange is recorded:

Mr. FORAND. Now, Mr. Secretary, do the actuaries' estimates give any justification for claims that the cost would be $2 billion to the program the first year?

Mr. FLEMMING. The answer to that is "No." Our actuary's estimates, as far as the first year costs are concerned, were $1,120 million (or 0.53 percent of taxable payroll).

However, Mr. Flemming estimated that over the period from 1960 to 2050, a higher average tax would be required: approximately four-fifths of 1 percent. Needless to say, it is important that the cost estimates be as accurate as possible, and you may be sure I shall give this question careful attention if legislation such as the Forand bill is passed by the House and forwarded to the Senate.

In the meantime, variations of the Forand bill and alternative proposals to strengthen private health insurance or State programs are being studied in the Senate. I trust you feel free to give your views on these bills as congressional consideration of them continues.

With best wishes, I am,

Sincerely yours,

THOMAS C. HENNINGS, Jr.

WE REPLY TO SENATOR HENNINGS

Senator THOMAS C. HENNINGS, Jr.
Senate Office Building,
Washington, D.C.

DEAR TOM: Some genius several years ago (under Roosevelt) struck oil, rich oil, when he dreamed up the checkoff system of collecting taxes on payrolls.

Since that time you and all the other so-called leaders in Congress have been working overtime trying to dream up additional taxes (deductions from employers).

The Forand bill seeking medical aid for the aged is just another example.

The tax, you say, will be only one-half of 1 percent, but you must remember that this one-half of 1 percent is in addition to the 6 percent already being collected for social security, and the 2.7 percent already being collected for unemployment compensation, and the 1 to 11 percent being collected to defray the cost of workman's compensation insurance. My God man, do you really believe that this can go on and on, or is this part of a vicious scheme to drive more and more of small guys to the wall?

You might also recall that our sales tax in Missouri began as a very low one-half of 1 percent tax. Then the rate was doubled, and doubled again. It is now 2 percent—and each legislature toys with the idea of upping the rate.

The income tax (you've probably heard of it) also started out as a very low tax. In fact, it was considered a joke for many years—the rates were so low. Now my taxes start at 52 percent, and they can go to 91 percent.

England, Sweden, and several other countries have tried medical aid plans very similar to those embodied in the Forand bill—and the results have been disastrous to the national economy.

However, it is a safe assumption that Members of Congress, including yourself, do not have time to read current history. Congressmen are so all-fired busy dreaming up more vote-getting schemes that time simply does not permit boning up on history—or current events.

TOM, for goodness sake, keep at least one foot on the ground. We in business can't make it as fast as you boys are spending it, and we do not have the borrowing capacity of the Federal Treasury. We, unfortunately are required to pay our bills out of income.

Granted that some old folks do need help. In our small county of Mississippi, the welfare people are currently spending $1,800,000 per year to help old folks and others. But please also grant the fact taxpayers are also in need of some help—help and relief from any additional socialistic schemes which have discouraged initiative, and stunted expansion or new ventures. My payroll simply can't stand any more taxes, and I can cite 50 or more of my friends who are looking for a way out. They are sick to the death of congressional meddling. Most of them would gladly settle for a Mom 'n Pop roadside stand with no payroll worries, and no additional taxes.

So you believe HEW Secretary, Mr. Flemming? And who is Mr. Flemming? Is he an authority in the field of socialized medicine? Is he a recognized authority in the legitimate insurance field? On what does he base his "guesstimate"? On facts or on some figure plucked out of dry air?

The key to Mr. Flemming's testimony last July before the House Ways and Means Committee is one word. That word is "estimates." His actuaries "estimate" the cost for the first year will be 0.53 percent of taxable payroll.

Senator TOM you will have to excuse my old-fashioned, idiotic thinking, colored and prejudiced no doubt by the fact that I have spent the past 30 years in the game of balancing income against expenditures. My thinking has no doubt been influenced by such mundane things as customers and customer reaction to higher prices—prices raised to take care of higher payrolls, higher operating costs, increased taxes, and the like. Such things as buyer resistance to higher prices. They buy less, and that means that there is less money in the till come nightfall with which to pay wages, operating costs, and taxes.

In other words Senator TOM, I admit to being a blithering idiot who never expects to reach the ethereal plane of your inspired thinking or that of your advisers.

However there are other idiots like myself who find it very difficult to agree with Mr. Flemming and his cost estimate of one-half of 1 percent.

You take the old-fashioned idiots who are known as the Insurance Institute which has been in business as many years as Mr. Flemming is old. They insist that legitimate insurance administrative costs alone for similar medical-hospital programs average 3⅛ percent.

Another old line insurance firm spends 1.9 percent on administrative expenses in the field of hospitalization alone.

You take the unemployment compensation figures which certainly are available to Mr. Flemming and to yourself. Uncle Sam collects three-tenths of 1 percent for administrative costs in that very limited field.

No unemployment claims are paid out of the three-tenths of 1 percent, and yet Mr. Flemming insists that his medical aid program for the needy aged can be administered, and pay all costs out of the remaining two-tenths of 1 percent.

Only a man with the vast knowledge of a U.S. Senator could even hope to break even in that situation. Ordinary folks like myself and several million other employers know from experience that it simply will not work.

No, Senator TOM, one-half of 1 percent is merely an opener, a wedge or foot in the door. Actuarial figures which are available both to you and to Mr. Flemming, place the cost nearer 4 to 5 percent of the taxable payroll than one-half of 1 percent, or four-fifths of 1 percent.

This much is true, and in that Mr. Flemming is correct. One could start the program on a tax of one-half of 1 percent, but the program would grow and grow and grow as additional Congresses seek to garner more and more votes in the field of the needy aged.

Within a few years the rate would necessarily rise to 4 or 5 percent, rather than one-half of 1 percent to carry the vast army of freeloaders who have learned how to milk the ADC and other welfare programs.

TOM, the time has come for some of you leaders in Congress to begin to start to use your God-given commonsense.

Up to now you have not exhibited even symptoms of ordinary intelligence or horsesense.

I also dare you to print this reply to your letter in the CONGRESSIONAL RECORD, or to let other members of your committee read it.

Nice hearing from you.

ART L. WALLHAUSEN.

New Epoch in World Trade Demands New American Policies

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. BETTS. Mr. Speaker, in the past few years many American industries have watched their markets become flooded with foreign goods. Nowadays, loss of sales and jobs to foreign competition is a common misfortune. In fact, so many cries of protest fill the air, it is hard to believe that, in a few short months, American negotiators will once again sit down at a conference table in Geneva to perpetrate more tariff giveaways.

One of the first industries to feel the pinch of cutrate competition from abroad was the American textile industry. Within this vast and vital industry, cotton manufacturers have been especially distressed by a combination of low-wage imports and our own Government's policy of selling American cotton abroad at a lower price than domestic mills must pay for it.

A few days ago, as many of my colleagues know, the American Cotton Manufacturers Institute assembled for a major meeting in Miami, Fla. Its hundreds of members heard a long list of experts sum up the problems facing the cotton textile industry. One of these speakers was H. B. McCoy, president of the Trade Relations Council and former Chief of the Business and Defense Services Administration in the Commerce Department.

Mr. McCoy's long experience in Government as a specialist in matters of foreign commerce gives him exceptional qualifications for appraising U.S. foreign economic policy, singling out its weaknesses, and charting a sensible and effective course for reform. This he did in his speech to the American Cotton Manufacturers Institute which follows:

SPEECH BY H. B. MCCOY, PRESIDENT, TRADE RELATIONS COUNCIL OF THE UNITED STATES, BEFORE MEMBERS OF THE AMERICAN COTTON MANUFACTURERS INSTITUTE, IN MIAMI, FLA., APRIL 9, 1960

It is said that each generation is incapable of appraising its era and its events in a historical perspective. I believe this continues to be true even though the progress of civilization in this century might be described, in one way at least, as the collapse of time.

In today's world a quarter of a century—collapsed time—does offer some perspective in an economic sense. In my perspective this world has completed a full economic cycle and is now moving rapidly into another new cycle. In the new phase, time and circumstances have changed. Some older economic problems and issues remain, new and more difficult ones are arising and will continue to do so.

With the end of the economic cycle that I am selecting, the United States has reached the end of a long road in foreign economic policy. The end of the road is visible—a turnoff on the route must be made.

The points on the economic cycle to which I have reference are: First, the stable and prosperous times of the mid-1920's; and, second, roughly, the present time. The economic progress advanced between these two periods has been spectacular. The really great achievements have occurred during the past few years—a major world depression, a world war and its aftermath characterized the major part of this time cycle.

The 1930 Tariff Act, although much maligned as a deliberate economic isolation device, was really a product of the times—unemployment and business stagnation, at home and abroad.

The genesis of our current foreign economic policy was the first enactment of the Trade Agreements Act in 1934. This act has constituted the hard core of our foreign trade relations with the free world for over 25 years. Under authority of this legisla-

tion, which has been extended over the years until June 30, 1960, the executive branch has by agreement with other countries lowered U.S. import duties on a reciprocal basis with more than 30 countries. During the period 1934 to the present, U.S. import duties have been reduced by about 80 percent from the 1930 level. These trade agreement rates have been available to all free world countries without other restrictions. At the same time, many of the countries which have received the benefits of our reduced tariffs have maintained discrimination against dollar imports. These restrictions have been either for balance of payment reasons, or other forms of burdens on imports. This situation was recently described by the Under Secretary of State in a speech on February 19, 1960, as follows:

"Throughout the period of postwar reconstruction, we vigorously put forward our firm belief that liberal international trade policies are essential to free world economic progress. * * * Until fairly recently, however, ours has been a rather lonely position. The industrial nations, with few exceptions, clung to exchange controls and severe quantitative import restrictions for balance-of-payment reasons. In addition, most of them felt that a measure of protectionism would foster much needed industrial growth."

It is one of the ironies of contemporary international economic relations that the countries which have been the chief beneficiaries of our low tariff structure, and have been the chief sources of discrimination against dollar imports, have been the most articulate criticis of any proposed changes in U.S. import duties or Government procurement that might be justified under terms of law or trade agreements. In a large measure, the administration of our tariff policy has been subject to the consent and desires of those countries having the most direct interest in U.S. import trade.

In addition to its leadership in the reduction of international trade barriers on a one-sided basis, the United States fostered a number of international institutions to promote international trade. The World Bank and Monetary Fund, the International Finance Corporation, the Inter-American Development Bank, and the International Development Association are institutions which could not have been established without the financial support of the United States.

Since 1948, our country has provided massive financial assistance to the economic rehabilitation of Western Europe. This phase of our assistance program has been completed. With U.S. financial and technical help, Western Europe and Japan are now extremely prosperous areas, with a new and highly productive industrial system.

We are now engaged in a large economic aid program on behalf of underdeveloped areas. The process for Western Europe will be repeated in these areas, although progress may be slower.

The mutual defense and economic assistance program has been for both political and economic objectives. It is difficult to determine which has been the more important, or in which we have had the most success. What has been accomplished by our tariff policy during the past 25 years, and our economic assistance to other countries during the past 12 years—and the consequences thereof—will bring about fundamental changes in the scope and character of international trade. The rise in economic strength of many countries, together with the formation of regional trade blocs, will result in significant changes and shifts in economic power and leadership. These prospective developments are of utmost importance to U.S. foreign economic policy and to American industry.

Important results of our foreign economic policy over the years are now clearly evident. I summarize these results as follows: General reduction of import duties by the countries which are members of GATT, on a reciprocal basis; economic aid and mutual security expenditures, loans, and grants for industrial development abroad, and extensive technical assistance, has been the vital ingredient in the economic recovery and current progress in Western Europe and Japan; the revival of international trade on a greatly expanded scale has been largely financed by U.S. dollars; due to balance of payment problems and protectionist measures there has been discrimination for many years against dollar imports; through the aid program and otherwise, the United tSates has financed its principal international competition; U.S. imports reached a record level in 1959, with an increasing proportion of such imports being highly manufactured goods; deficits in the U.S. balance of payments have existed for some time but reached a record level of $3.7 billion in 1959, a serious threat to the dollar, and gold reserve, if continued; foreign countries now appear to claim vested rights in U.S. tariff policy, if not in the economic aid program; domestic industry has found it almost impossible to secure any measure of relief, provided for in the Trade Agreements Act, from destructive imports.

If some of the adverse aspects of the results of our foreign economic policy were not enough, the competitive position of U.S. industry in domestic and foreign markets has deteriorated.

The inflationary effects of costs in our economy have steadily reduced the competitive margin of U.S. manufacturers. This is reflected in reduced exports which was one of the chief factors in the deficit in the balance of payments last year. Concurrently with the loss of competitive ability, U.S. industry is increasing its private investment abroad. The purpose of these investments is to regain former export markets, to participate in the expected economic growth in certain areas, especially Western Europe, and to produce for export to the United States to supplement domestic production. There is ample evidence that more and more U.S. manufacturers are considering expansion abroad as a method of increasing their competitive position in domestic markets. A continuation of our present foreign economic policy would certainly add emphasis to the internationalization of U.S. industry. While in theory the expansion of U.S. private investment abroad is desirable and not adverse to U.S. interests, the extension of private investment to displace or substitute for domestic expansion raises serious implications with respect to economic growth at home. While I do not believe that U.S. industry investment abroad is as yet having any appreciable influence on industrial expansion in the domestic section, I do believe, unless our policies are changed, the inducements for foreign investment, not only to profitably employ capital but also to increase the amount of goods the domestic corporations introduce for sale into U.S. markets, will have serious effects on our balance of payments and on our industrial employment.

The formation of the European trade blocs—the European Economic Community and the Free Trade Association—is certainly going to produce important changes in our trade relations with those areas. The nature of the two trade areas suggests that the policies and operations will result in an undetermined degree of discrimination against nonmembers, including the United States. I fully expect that the full development of a common market in Europe will further enhance the international competitive position of European industry to the disadvantage of U.S. industry in both domestic and foreign markets.

Within the time limit permitted this morning, I have been able to discuss quite superficially only the highlights of the general nature of our foreign economic policy and its effects now and in the future on our economy. For purpose of emphasis, I repeat that our policies must be changed to deal with an entirely new international economic situation. If we do not, I foresee serious adverse effects on our national economy. If our current policies are pursued without substantial change, I firmly believe that the economic decisions made in other countries will substantially control the nature and scope of further economic progress in this country.

The balance of payments deficit problem must be dealt with by positive action if the present imbalance continues as a long-term trend. Current international policy tends to maintain the situation, if not actually to expand the gap. Not long ago, Government agencies were encouraging more direct private investment abroad, presumably to reduce and replace governmental expenditures for capital investment. At the same time, no decreases in U.S. Government loans and grants were contemplated. In his state of the Union message, the President referred to the balance of payments deficit as a matter of serious import to the country and indicated that an adjustment of the trend is essential. The only proposal in this direction advanced to date is to call upon U.S. industry to put more effort into selling U.S. products abroad. This proposal adds to the controversy about U.S. industry pricing itself out of foreign markets.

Western European countries have now split into two rival trade blocs—the European Economic Community and the Free Trade Association. These two groups, although organized differently, are each dedicated to advancing the trade interests of their own members. The two blocs are competitive with each other with a distinct possibility of substantial discrimination to nonmembers. The United States might well be the chief victim of such discrimination, while at the same time, under present policy, providing nondiscriminatory treatment to all members of both trade areas.

Discussions are underway regarding the possible formation of a regional trade area or areas among Latin American countries.

It is abundantly clear that economic progress in the free world during the past few years is now producing, and will continue to produce, dramatic and far-reaching changes in the balances of economic power and consequent shifts in the sources of international trade. To deal with these fast-moving events, which are producing highly complex economic relationships with the rest of the world, the United States needs a new and revised statutory framework under which to conduct our foreign economic relations. Present laws, institutions, and policies lack cohesion, are cumbersome in operation and do not permit the establishment and achieving of clear and consistent national objectives in our economic relations with the rest of the world.

I am not prepared at this time to give precise specifications of a new and revised foreign economic policy for the years ahead. I can indicate what the principal elements and objectives should be, all of which are clearly indicated by the results and future portents of our present policy. In my judgment, our foreign trade policy should: (1) Provide opportunity for private enterprise, at home and abroad, to carry on international trade on a basis that is mutually profitable for each participating nation; (2) provide prompt and adequate remedy against dumping, or destructive selling, of materials or goods for purposes of disruption of international markets or absorption of excess production; (3) provide for effective procedures, when necessary, for safeguarding domestic employment and industrial expansion against imports from areas of substandard wages, with measures for tariff reduction incentives related to wage levels in those countries; (4) provide effective pro-

cedures for general safeguarding of domestic economic growth, and national security, from imports which cause serious dislocation of employment, adversely affect new capital investment and threaten national security; (5) provide for definite measures to deal with discrimination against imports from the United States; (6) insure flexibility in administration of foreign trade policy to cope with foreign trade blocs; (7) continue authority to negotiate reciprocal trade agreements; (8) reorganize Federal institutions and procedures with centralization and cohesion of administration to achieve national objectives in our foreign economic policy.

I cannot conceive of any change in our current policy during this administration. The convictions of our present policymakers will be carried out to the end of this administration. There is, of course, no chance whatever of congressional action in this session. I do not anticipate any change of attitude of the executive branch toward its past practices in administering the escape clause provisions of the Trade Agreements Act. I fully expect the administration to publish, probably within a month, an extensive list of products on which the Government will propose further reductions of U.S. tariffs. I anticipate this list will include products which have had large previous reductions which have resulted in great increases in import trade—in some cases to the extent of market domination. I think this audience should not be surprised if textile products are well represented on the bargaining list.

A major change in our foreign economic policy cannot be achieved before the June 1962 expiration date of the Trade Agreements Act. The next 2 years are crucial for those who believe that a change must be made. This is a short time to set in motion the constructive forces that will be sufficient to alter a policy that has become so well entrenched.

The advocates of the free or liberal trade policy, both within and outside Government, will make no compromise in any detail whatever with any other point of view. For them there is no middle ground. To agree with them is to be for virtue; to disagree, even on specifics, is to be for sin. To give the advocates of free trade their due, they have succeeded in establishing free trade as a fashionable economic theory. Like other fashions, particularly in the economic area, changes are rapid and drastic when they occur.

The effort to bring to business and to the public objective information about the results and future implications of our current foreign economic policy, in an endeavor to bring about a change and redirection, is going to be a large undertaking. The stakes involved are of vital importance to many industries, large and small. The opposition is highly articulate and resourceful.

Those in American industry and business who believe a change in our policy is due, or overdue, must work together and in unison. There is no other hope of success. The effort must be closely coordinated. A definite program and policy objectives should be developed and combined efforts concentrated on putting these forward for adoption. The target date is June 1962, but much vital preparatory work must be done in the interim.

I want to commend the textile industry for its courageous fight against the inequities of foreign economic policy, as it has affected this great industry. I know, from both my long Government experience and the short time I have been with the Trade Relations Council, that officers of your member firms and trade associations have spent long hours of work, done extensive traveling, and made appearances before governmental organizations, seeking relief from destructive imports. I sincerely believe that your efforts have produced important results for your industry, even though some of the relief secured is inadequate and perhaps temporary in nature. In my opinion, your industry should continue its efforts to secure proper remedial action when necessary, although you will continue to face official opposition.

I am sure your industry has, through its courageous action of challenging our foreign economic policy and the actions of the executive branch in administration of the Trade Agreements Act, brought these issues to the attention of the Congress, business, and the public more effectively than any other industry. I think your industry has provided groundwork which will be extremely valuable in the policy battle ahead.

I want to repeat, for purpose of emphasis, that centralization of effort is essential if industry is to achieve a change in our foreign economic policy. Too frequently, industry and business disperse their efforts on a variety of uncoordinated and sometimes divergent objectives. This is usually fatal for the cause, especially against a well-organized opposition. The issues are too important to U.S. industry to afford the luxury of a mistake of this kind.

Urges House Committee Approval of Cold War Veterans GI Bill; Dallas Times Herald Shows Value of College Education

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. YARBOROUGH. Mr. President, although the cold war veterans educational bill passed the Senate in July of last year by a vote of 57 to 31, the House Veterans' Affairs Committee has recently called for additional staff studies concerning the proposal.

It is my understanding that the House committee expects to have this additional information within a period of 2 weeks.

In behalf of all of us interested in this important educational program—the veterans, their families educators, and many other individuals and groups—I respectfully urge the House Veterans' Affairs Committee membership to vote out this bill at the earliest possible date. It surely deserves consideration of the full membership of the House and the time for its passage is growing very short.

On April 22, 1960, one of Texas major circulation newspapers, the Dallas Times Herald, editorialized citing the value of a college education to young Americans, and to the value to individuals of the cold war veterans educational bill. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "College Make a Big Difference."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COLLEGE MAKES BIG DIFFERENCE

Census figures, says Senator RALPH YARBOROUGH, show that men who finish college stand to make $435,000 in their lifetime as against $258,000 for those who finish only high school.

The difference, on the average, between a high school diploma and a college sheepskin thus is about $177,000. This figure should cause many a youngster to have second thoughts about deciding against higher education.

Other statistics have been cited from time to time to show that, albeit with many exceptions, earning capacity is generally correlated with extent of education. The youngster who only finishes high school will be better off, in all likelihood, than the one who succumbs to the temptation to quit short of a diploma.

Senator YARBOROUGH's purpose in stressing the $177,000 differential was to urge passage of his so-called cold war veterans education bill. He points out that the measure is needed to enable a million veterans to attend college, many of whom otherwise will not make it through.

How much the Nation owes its veterans, both those who made sacrifices in time of war and in time of peace, is debatable. Not debatable, however, is the fact that it is to the advantage of the Nation as well as to its young people individually that higher education be made as financially accessible as possible.

If the Census Bureau's figures are correct, financing college educations is such a sound investment that it should be attracting far more venture capital from private sources than it is.

Federal Power Commissioner William R. Connole

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. IRWIN. Mr. Speaker, a short time ago there was a disclosure that the White House does not plan to submit the name of William R. Connole for reappointment to the Federal Power Commission. This was followed up by a variety of speculation as to the reasons, with general agreement that Commissioner Connole's attitude toward regulation of natural gas prices is the major factor. If true, it is most unfortunate for Commissioner Connole has been prominent in fighting for adequate and effective regulation. Perhaps, however, the White House has other reasons. These would be interesting to learn but with others mentioned by my colleague, Hon. EMILIO Q. DADDARIO, in an extension of remarks Tuesday, I would prefer and sincerely hope that Commissioner Connole is reappointed and there is no purpose for discussing reasons for his not being reappointed.

Pursuant to permission previously granted, I include an article from Time magazine of May 2, 1960, and an item from Business Week of April 23, 1960, which bear on the subject:

[From Time magazine]

THE PRICE OF DISSENT

The maverick on the Federal Power Commission is William R. Connole, 37, a Connecticut political independent. For the past 5 years Connole has built a reputation

as a dissenter from his colleagues, a defender of the consumer by urging stricter regulation of natural gas prices. He was the lone dissenter in the precedent-setting CATC case (Time, July 8, 1957), when the FPC allowed new field gas sales worth $1 billion without final approval of the rates. Connole's dissent was implicitly endorsed by the U.S. Supreme Court when it criticized the FPC decision, upholding the contention of New York State's Public Service Commission that the failure to set firm rates did not sufficiently protect the consumer. Last week the White House confirmed reports that Dissenter Connole would not be reappointed when his term expires on June 22. His likely successor: Harold I. Baynton, now chief counsel to the Senate Commerce Committee.

Keen, combative Connole is a Hartford lawyer who was appointed to the FPC in 1955 after serving as general counsel of the Connecticut Public Utilities Commission. When word got out that he was not to be reappointed, seven State public utility commissions protested. Unmoved, the White House said that the President decided not to reappoint Connole because he does not get along with the other commissioners, has urged greater Federal control of gas than the Administration believes is necessary. Explained a presidential aide: "There is no reason to keep a man in a job whose philosophy does not agree with that of the President."

[From Business Week, Apr. 23, 1960]

WASHINGTON OUTLOOK

The regulatory agencies pose new headaches for the administration.

New outcries about the Federal Power Commission are certain to follow official verification of the report that Eisenhower will replace Commissioner William R. Connole, whose term expires June 22. Connole has been a strong advocate of tighter regulation of natural gas prices—a fact that, his defenders suspect, contributed mightily to his downfall.

Politicians from gas-consuming States may be expected to step up demands for White House action against FPC Chairman Jerome Kuykendall and others whose social and business relations with regulated industries are undergoing dual investigation—by the Justice Department and a House investigating committee.

Gore Vidal—What Should Be a Great Political Career

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. PROXMIRE. Mr. President, occasionally a man comes into the political life of this Nation whose personality and ability are so great that the impact he makes on his country and his times is of serious and measurable significance. It is a very rare occasion indeed when these movers and shakers can be anticipated at the very outset of their career.

We seem to be on the verge of this kind of exciting discovery today. A young man of great ability has caught the imagination of the discerning throughout the country in recent months. His achievements as a dramatist include authorship of that new smash New York hit—"The Best Man," film adaptation of the number one movie box office hit, "Suddenly Last Summer," main responsibility with Christopher Fry for film writing of "Ben-Hur" which has just won 11 Oscars.

Mr. Vidal, a Democrat, has decided to enter politics under the most challenging circumstances. He is opposing the reelection of an incumbent New York Republican Representative who has been elected five times and won his last reelection, in spite of the nationwide Democratic sweep of 1958, by a whopping 2 to 1.

Recently the New Yorker magazine carried a brief interview with this phenomenal young man. It constitutes one of the most delightful scraps of political miscellany I have run across in a long time. So Mr. President, I ask unanimous consent that the interview, edited to conform to the rules of the Senate, be printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

[From the New Yorker, Apr. 23, 1960]

VIDAL

Nothing is easier nowadays than to get a feeling of being entirely surrounded by Gore Vidal. His political drama "The Best Man" fills the Morosco nightly. His film adaptation of Tennessee Williams' "Suddenly, Last Summer" was recently reported to be doing the best business of any movie in the country. "Ben-Hur," whose script is mainly the work of Mr. Vidal and Christopher Fry, won 11 Oscars. The movie version of his "Visit to a Small Planet"—described by him as the unauthorized version—is being offered in dozens of neighborhood houses. Stay home at night, and like as not you'll be assailed by Mr. Vidal on television. He is one of the busiest of the panelists, and a while back he appeared in his own television play "The Indestructible Mr. Gore," which dealt with the life of his grandfather, the late Senator Thomas Gore, of Oklahoma. Pick up a magazine, and if it happens to be the Reporter, you will see that Mr. Vidal is also a theater critic. Pick a newspaper, and you will find that he is a Democratic candidate for Congress in the 29th District of New York, which is composed of the counties of Dutchess, Ulster, Columbia, Greene, and Schoharie.

It is with Candidate Vidal that we are concerned at the moment, and we recently sent a man who represented himself as a seasoned political observer up to Barrytown, in Dutchess County, where Mr. Vidal lives. His home is a resplendent masterpiece of Greek revival built by John R. Livingston in 1820 and named, inevitably, Edgewater. Unlike most of the houses along the Hudson, it sits smack on the bank of the river, no more than three or four feet above water level. One of its former owners was the essayist John Jay Chapman. Its present owner acquired it 10 years ago, when he was 24. He greeted our representative on the front steps, and consented then and there to an exclusive press conference, the official verbatim transcript of which follows:

"Question. Why are you in politics?

"Answer. Because I find it exhilarating and satisfying.

"Question. Who is your opponent?

"Answer. The incumbent, J. ERNEST WHARTON, Republican, of Schoharie County.

"Question. Is he formidable?

"Answer. A foeman worthy of my steel. A five-time winner. A leading member of the Interior and Insular Affairs Committee. A creature of infinite cunning. No sooner had I entered the race and described him as a do-nothing Congressman than he put me on the defensive by sponsoring a bill making it a Federal offense to spread false information about bombs on airplanes, buses, and the like. What could I do but applaud? Now I'm guilty of me tooism. First round to WHARTON. But I shall return.

"Question. Do you think you can win?

"Answer. Certainly. All I have to do is overcome a 2 to 1 Republican lead. I must create a new voting pattern.

"Question. How do you expect to do that?

"Answer. In the main, by superior industry. Actually, I have labored in the vineyard for almost a year now. Why do you suppose I've been turning up like a bad penny on television? And I have addressed practically every Rotary, Kiwanis, chamber of commerce, and Young Marrieds Club in the 29th District.

"Question. Have you talked politics in those places?

"Answer. Couldn't do that or I wouldn't have been asked. I've talked Hollywood, television, Broadway, what Liz Taylor is like, and that sort of thing. They've heard the name Vidal all over the district, and it's an easy one to remember. Now and then I have injected politics in a mild way. I have a little bit about my being asked to the White House to write a speech on integration for the President.

"Question. Did that happen?

"Answer. Oh, yes. Sherman Adams asked me to do it, and he liked the speech.

"Question. Did the President deliver it?

"Answer. No.

"Question. Does any machine control you?

"Answer. No. Next question, please.

"Question. Do you have a machine of your own?

"Answer. I'm lunching with Arthur Krock next week. At the Morosco, we're selling tickets for December performances.

"Question. What are the issues hereabouts? Please be commendably brief.

"Answer. The big one is schools. We need more of them. I stand foursquare for Federal aid to education. Pollution of the lordly Hudson is another, and one dear to me. As you can see, the river is a hundred feet from my door. In summer, I swim in it every day. I shall need my health to serve my people.

"Question. Can you resist lobbies?

"Answer. With the greatest of ease. I can also resist making jokes about them.

"Question. Brooks Atkinson, of Greene County, has announced in the Times that he will vote for you. Do you welcome his support?

"Answer. Cordially. Though nothing that votes is alien to me, I particularly welcome the approval of Mr. Atkinson. I am hoping for that of Mrs. Atkinson, too. There is immediate seating on my bandwagon.

"Question. Do you consider yourself a candidate for the Pulitzer Prize?

"Answer. I am running in Columbia County but not at Columbia University. I have not actively sought the prize, nor will I do so. If, however, the prize should seek the man, I would not—repeat, not—decline so signal an honor.

"Question. Do you aspire to office even higher than that of Representative from the 29th district?

"Answer. I have, since childhood, said that I would rather be President than write.

"Question. Have you a campaign slogan?

"Answer. Yes. A fine one. It's from Alfred North Whitehead: 'No code of verbal statement can ever exhaust the shifting background of presupposed fact.'

"Question. What does that mean?

"Answer. It means that questions are quite as important as answers. I lack many answers but I think I know the right questions. For example, what kind of society do we want? Only by examining presup-

positions can we approach any kind of truth. In 'The Best Man,' I have tried to raise important questions about politics and the Presidency. I would like to go to Washington and perhaps head a congressional investigation of what we mean when we speak of 'the free world.'

"Question. Have you mentioned your campaign slogan to your managers? And, if so, what do they think of it?

"Answer. To your first question the answer is yes. To the second it is that they made no audible response.

"Question. Thank you, Mr. Candidate."

Commemorative Postage Stamps

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an address which I had the pleasure to present on Saturday, April 9, 1960, to the Stamp Society, Adam Plewacki American Legion Post No. 799, Buffalo, N.Y.

The address follows:

Mr. Chairman, distinguished guest, ladies, and gentlemen, first, I should like to say that it is a great privilege and a pleasure for me to be here tonight to take an active part in this great exhibition of philatelic material. I am further honored to be designated an honorary chairman of this event, which is an outstanding civic and community achievement that brings the praise and good wishes of our citizenry to the Plewacki Post for the foresight, planning and the diligent efforts and energy expended to insure the repeated success of this affair.

Since entering Congress, I have become extremely interested in philatelic matters and have diligently labored to obtain for our fair city of Buffalo, the honor of being designated a "first day of issue" city for a commemorative stamp. We had a strong case developed on the seaway stamp until the State Department got involved in negotiations with Canada, and the visit of the Queen, with the result that Massena, N.Y., stole the designation which I felt was rightfully ours, as the first major U.S. port on the seaway. Nevertheless, I do not discourage easily, and I have incessantly barraged Mr. Rohe Walters, special assistant to Postmaster General Summerfield on philatelic matters with Buffalo's case for this honor and have had our plea presented before the Stamp Advisory Council.

At the present time, I have written assurances that every consideration will be given to the designation of Buffalo as a first day site for a stamp in the near future. The Post Office Department is very much aware of the fact that too many stamps are placed on first day sale in Washington, D.C., and it is their sincere desire to spread these first day cover designations to encompass all of the States in accordance with the belief that our postage stamps represent and belong to the Nation. From a philatelic viewpoint, Buffalo has a strong case. Our city has not been honored by a first day of issue designation in over a quarter of a century and the only first day issues ever to emanate from this city were shared with a half dozen other cities back in the early 1930's when covers had not reached the proportion of today's importance in the philatelic hobby.

We have in our city, many fine active philatelic organizations that have indicated to me their strong support for such a designation for Buffalo, and this nucleus, combined with a strong civic and community effort, would make any such designation a noteworthy event.

I have held a series of conferences with the Post Office Department in Washington and they assure me that the Post Office recognizes that Buffalo—through circumstances of historical association—has not been honored by a first day sale in approximately a quarter of a century. They further agree with me that Buffalo, in addition to its importance as a city, is noted for its strong philatelic connotations. I can assure you here tonight, that these conferences shall continue without fail until such time as we shall be able to see the postmark of our fair city impressed upon a cachet envelope on the first day of issue of a new stamp emission.

It is significant to note that this fourth annual Plewacki Stamp Show is honoring and paying tribute to Ignace J. Paderewski. It was only this week that I had the opportunity to pay my respects at the grave of Poland's famous musical artist, statesman, soldier, and freedom fighter. It may interest some to know that he is buried in Arlington National Cemetery by special authorization of President Franklin D. Roosevelt. While standing at his final resting place, I paused to reflect and pay my own personal tribute to the life and deeds of this great and wonderful man who made such generous contributions to his beloved homeland, Poland, and of his contributions to the world in the fields of music, politics, and as an unceasing fighter for freedom in war and in peace.

In keeping with the spirit of Plewacki Post in honoring Paderewski by this fine exhibition, I have added my voice to the nationwide demand that he be honored in the special champion of liberty series as a man who ranks high in the esteem of his countrymen and freedom-loving people throughout the world.

The Post Office Department has evidently heeded this mounting crescendo of voices asking for this honor, and it is now an open secret that on November 6, 1960, Ignace Paderewski will be honored by a 4-cent and 8-cent commemorative issue in the champion of liberty series.

This stamp will not only pay just tribute to a great man, but will also pay homage to the many sons of of Poland who keep alive the fires of liberty in their own subjugated land.

To return to the subject of philately or its more common name of stamp collecting, although not a collector myself due to time limitations, I have learned a lot about your hobby and met many, many interesting people who are in it. Our Post Office issues 24 billion stamps each year, and it seems that a good number of you are dedicated to the acquisition of the entire 24 billion for your own personal collections, leaving none of the general public who may want to mail a letter or two. In my indoctrination into philately, I have visited the Philatelic Agency in Washington with its very fine exhibits and also the Smithsonian Institution, which has a stamp collection that would make any collector green with envy. I have cooperated with the many persons connected with this fine hobby and shall continue to make available the complete services of my office for the advancement of this hobby, with its accompanying educational values and expansion of knowledge of our national heritage as expressed on our postage stamps.

Who Raised the Religious Issue?

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. BYRD of West Virginia. Mr. President, many things have been said and written concerning the so-called religious issue during the campaigning of Senators KENNEDY and HUMPHREY in my home State of West Virginia. There have been repeated reports that the religious question is the main issue with the voters of West Virginia and that illtermed "gang-up" forces have brought it into the open. I have maintained that this is not the case, and I was pleased recently with an editorial written by Doris Fleeson which appeared in the April 25 issue of the Washington Evening Star. This editorial is headlined, "Who Raised the Religious Issue?" and goes on to tell of a 1956 memorandum released by Senator KENNEDY's chief of staff. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO RAISED THE RELIGIOUS ISSUE?—KENNEDY AID'S 1956 MEMO RECALLED, CITING SENATOR'S EFFECT ON CATHOLIC VOTE

(By Doris Fleeson)

Any real account of the religious issue in the 1960 campaign must begin not in West Virginia or Wisconsin, but with the Democratic National Convention of 1956. It is interesting that its use there attracted no adverse comment but was accepted as a fact of political life of which sensible politicans would take note—and they did.

When Democrats began to gather at Chicago for the all but certain renomination of Adlai Stevenson, they found themselves the object of a quiet but well-organized drive upon the vice presidency by Senator KENNEDY, of Massachusetts. Among the persuaders skillfully employed was a 3,000-word memorandum prepared under the direction of Ted Sorenson, who was and still is KENNEDY's chief of staff.

This document suggested that there was a "Catholic vote" in this country and described in some detail its apparent size, location and concentration within the Democratic Party. The argument was made that this vote was drifting to the Republicans, especially President Eisenhower, but could be lured back by a Catholic candidate for Vice President.

Specifically, it cited figures to show that Catholic candidates run strongly in Catholic districts. No experienced Democratic leader showed any disposition to deny this, and many freely admitted that an apparent drift of Catholics toward the Republican Party had them worried.

Among the leaders so persuaded was Stevenson himself. The case made for KENNEDY was a factor in his decision to break with tradition and invite the convention to make its own free choice for Vice President. This seemed fair to Stevenson both as a matter of equity and good politics.

The surprising force of the 1956 KENNEDY drive upon second place at Chicago and its

near success provided that convention with its best drama. What part the Sorenson strategy played was obscured by the unexpectedly massive southern support for KENNEDY.

What the South was proving, of course, was not only that it liked Jack but that it detested ESTES KEFAUVER, the liberal Tennessee Senator it regarded as a traitor to its way of life. KEFAUVER won, largely because the delegates felt he would appeal to the farm and labor vote, areas which still are among the softer spots of the KENNEDY campaign.

The relevant point today is that the Sorenson memorandum was not a hidden persuader, clandestinely employed. It was not published, but it was openly and cleanly used to strengthen KENNEDY's case. Among those propagating it was John Bailey, Democratic State chairman, who is active in the 1960 campaign to make KENNEDY President.

It was discussed then and is still freely discussed by politicans and the press. It is threaded all through the KENNEDY strategy of achieving the nomination by the primary route. At any given moment KENNEDY aids, and the candidates too, can tell anyone the figures of Catholic strength not only in a State, but in a district or even a county.

Thus it is clearly disingenuous for KENNEDY and his aids to blame the press for raising the religious issue and for the Senator himself in his speech before the editors here to cast doubt on the existence of any Catholic bloc voting.

Goals for America

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following policy statement adopted by the Democratic Midwest Conference held in Detroit, Mich., on March 26, 1960. It was ably drafted by Thomas Quimby, Democratic National Committeeman from Michigan, and well reflects the thinking of Midwest Democrats regarding the goals for America and the shortcomings of the present administration in this area.

The statement follows:

GOALS FOR AMERICA—ECONOMIC GROWTH

The Eisenhower-Nixon policy of stability through stagnation has had unfortunate repercussions throughout our economy. These are reflected in the miserable trends of our total national product during the period 1953–59 contrasted with what these trends would have been if our first basic objective—optimum economic growth—had been achieved.

The Republican average annual growth rate of 2.3 percent, instead of the needed growth rate of about 5 percent, caused the deficiency in our overall national production for the 7 years 1953–59 inclusive to reach the staggering total of about $200 billion, measured in uniform 1958 dollars. Correspondingly, total employment opportunity during this 7-year period was about 15 million man-years lower than it would have been under conditions of optimum economic growth.

This dismal record cannot be hidden by the Republican efforts, at the peak of one or another of their short-lived booms, to claim that "we are higher than ever before." These misleading claims ignore the obvious fact that the performance of a roller coaster is not to be judged solely by the upswings, ignoring the declines which lie just over the humps. It is also extremely disingenuous to claim, at the peak of a short-lived boom, that we are higher than ever before in production and employment, but to ignore the fact that we are not enough higher to absorb the consistent advance in population, civilian labor force, and technology.

To illustrate this point, we have had more unemployment of plant and manpower at the peak of each short-lived Republican boom than at the peak of the immediately previous Republican boom, and we have had more unemployment of plant and manpower at the bottom of each Republican recession than at the bottom of the immediately previous Republican recession. This means that, viewing our economic performance in the longer range perspective which is so essential, the Republican economic policies have carried us—with some ups and downs—along the road of a long-term retreat from maximum employment and production. Unemployment as measured by the Census Bureau, which was less than 2 million in 1952, was 3.8 million in 1959 as a whole, and more than 3.6 million seasonally adjusted in December 1959. The true level of unemployment, including the full-time equivalent of part-time employment, which stood at 2.8 million in 1953, was 5 million in 1959, and almost 4.8 million seasonally adjusted in December 1959. The ambiguous economic developments thus far in 1960 do not indicate any sizable long-term improvement in the unemployment picture.

These overall deficits in nationwide production and employment may easily be translated into their impact upon the rate of private economic progress. During the 7-year period 1953 to 1959, inclusive, measured in uniform 1958 dollars, average American family income was $3,400 lower than it would have been under conditions of maximum prosperity and optimum economic growth. The private purchases of all American consumers, toward maintaining and improving their living standards, was about $127 billion lower than it should have been. In turn, allowing for taxes and savings, the deficiency in wages and salaries was more than $126 billion; the deficiency in farm operators' net income was more than $36 billion; and the deficiency in unincorporated business and professional income was more than $10 billion—all measured in uniform 1958 dollars.

If our urgent and unmet public needs were not so great, it might be argued by some relatively uninformed people that the stagnation in our overall economic progress and consequently in our private economic progress for a period of 7 years should not be taken too seriously, in view of our "high private standards of living." This argument, of course, neglects the vital need for private economic progress which still confronts us. More important still, public programs are paid for economically out of private production, land paid for financially in the main by taxes upon private incomes. Thus, huge deficits in private production and private incomes have a devastating impact upon public programs, and doubly so when the national administration is committed to the erroneous policy of adjusting the Federal budget downward to a repressed economy, instead of using the Federal budget to help reactivate the whole private economy and to meet our most pressing public needs.

To illustrate, if during the 7-year period, 1953 to 1959, inclusive, we had enjoyed maximum prosperity and optimum overall economic growth—instead of suffering a deficiency of $200 billion in total national production—Federal, State, and local governments would have collected about $65 billion more in revenues at existing tax rates than were actually collected. And since these additional revenue collections would have been derived from an economy producing about $200 billion more in total goods and services, the higher tax collections (without higher tax rates) would have been entirely consistent with the tremendously higher advances in private incomes and living standards already portrayed.

With these additional public revenues, Government action at all levels could have moved forward very substantially toward closing the glaring gaps in essential public programs, both domestic and international. With various portions of the $65 billion more in public revenues, we could have built 140,000 school classrooms and paid school teachers $1,000 more each year; provided for more than 360,000 additional hospital beds; increased social security payments substantially; and replaced 1.4 million slum homes with good homes. At the same time, we could have used about 20 percent of these additional public revenues to improve our national defense at the rates which most experts said we needed but which the administration said "we could not afford"; and we could have increased economic assistance to free peoples overseas by about 50 percent. And the performance of all of these essential purposes would have required only slightly more than 70 percent of the additional $65 billion in public revenues. The amount left over, almost 30 percent or about $19 billion, would have been more than enough to wipe out the net aggregate deficit in the cash Federal budget during the calendar years 1953–59.

The enormous deficits in the overall economy, as always, have hit hardest those least able to protect themselves. Because the farm sector is always vulnerable, the steadfast efforts of the Secretary of Agriculture to deflate farm income have been aided and abetted by the unsatisfactory economic conditions throughout the Nation. Because small business is not as strong as big business—whatever the reasons may be—thousands of small businesses have been liquidated by the economic climate, while big business has been at worst embarrassed. The rising level of unemployment has caused so-called marginal workers to lose their jobs first, and to stay unemployed the longest. Our "inability to afford" adequate expansion of social security and other protective programs has borne down most heavily upon those groups who at best are underprivileged, and who are frequently poverty-stricken because of their low income receipts. The process of lifting those American families living in poverty to what is called a minimum health and decency level of income, which proceeded rapidly during periods of high economic growth, has been only nominal since 1953. All this might well have been expected, because regressive and short-sighted economic policies work against both economic justice and economic progress.

It is essential to realize fully the alternative consequences of high and low overall economic growth rates during the 5-year period 1960–1964, inclusive. Projecting the optimum growth rate of about 5 percent annually, and contrasting it with a projected repetition of the 2.3-percent average registered during the past 7 years, the aggregate differences for the 5-year period 1960–1964 inclusive, measured in uniform 1958 dollars, are as follows:

The difference in total national production comes to about $350 billion. This equates with a difference in employment opportunity of about 19 million man-years.

The difference in average family income (multiple-person families) comes to about $5,200.

The difference in personal consumption expenditures, directed toward rising living standards for a growing population—based upon the difference in total personal incomes less taxes and savings—comes to about $225 billion.

The difference comes to about $165 billion for wages and salaries; about $40 billion for farm operators' net income, and about $20 billion for unincorporated professional and business income.

The difference in private investment opportunity, including net foreign investment, comes to about $55 billion.

And the difference in Federal, State, and local public revenues, at existing tax rates, comes to about $100 billion—thus leaving that much more available for meeting essential public needs, as well as for application in part to the balancing of public budgets and to some retirement of public debts if need be.

With an optimum and steady rate of overall economic growth, the vast advances in private incomes and living standards would leave ample economic and financial room for the proper servicing of our now neglected public needs. As already pointed out, during the 5-year period, 1960 to 1964, inclusive, a 5-percent rather than a 2.3-percent average annual rate of overall growth would yield in the aggregate about $350 billion more in total national production. This in itself would yield automatically under existing tax rates about $100 billion more of public revenues, Federal, State and local—or an average of about $20 billion more per year.

The preponderance of these additional public revenues—perhaps about $80 billion—would flow to the Federal Government, while the balance would accrue to the States and localities.

With this in mind, a Federal budget responsive to our needs and entirely compatible with our economic and financial capabilities might register these improvements, comparing fiscal 1960 (as of January 1960) with calendar 1964.

(1) National security and international: Major national security outlays could rise from about $45.7 billion to about $57 billion, thus reflecting the prevalent expert judgment as to basic need. This would represent an increase from $246.18 to $296.10 on a per capita basis related to the total population, but a decrease from 9.32 percent of total national production to 8.95 percent under conditions of optimum and steady overall economic growth. Meanwhile, outlays for economic and technical development overseas could rise from about $1.7 billion to about $4 billion, representing an increase from $9.24 to $20.78 on a per capita basis, and an increase from 0.35 percent to 0.63 percent of total national production.

Naturally, if we are able to achieve a workable disarmament program all of these dollars will be available for works of peace.

(2) Education: Federal outlays for education could rise from $549 million to $5 billion, from $2.96 to $25.97 on a per capita basis, and from 0.11 percent to 0.78 percent of total national production. In concert with appropriately expanding efforts at other levels, both private and public, this would lift the total educational outlays of the Nation from about $22.3 billion, or about 4.8 percent of total national production, during the most recent school year, to about $38 billion, or about 5.8 percent of total national production, by the school year 1964–65. Such progress, appropriately apportioned, could add about 521,000 classrooms to our public schools, add almost half a million public schoolteachers, increase the average pay of public schoolteachers from about $5,100 to about $7,500, and greatly increase the facilities for higher education and the volume of scholarships and loans directed toward this end.

(3) Public health: Federal outlays in this area could rise from about $850 million to about 3.3 billion, from $0.58 to $17.14 on a per capita basis, and from 0.17 percent to 0.52 percent of total national production. Combined with appropriately increased efforts at other levels both private and public, and with social security expansion in the health field which does not enter into the Federal budget, the year 1964 would find us well on the way toward adequate medical care for all American families at costs within their means.

(4) Housing: Federal outlays in this category could rise from $590 million to $2.2 billion, from $3.19 to $11.43 on a per capita basis, and from 0.12 percent to 0.35 percent of total national production. Combined with appropriate expansion of conventional private housing, new formulas to house middle-income families involving both private and public efforts, and State and local as well as Federal assistance to slum clearance and housing for low-income groups, this would result in total housing production averaging annually more than 2 million units during the years immediately ahead. With this amount of progress, the number of substandard housing units in the United States, which stood at about 12½ million in 1958, could be reduced to somewhere between 1 and 2 million units 5 years hence. Moreover, a housing effort of this size, combined with comparable programs of urban renewal, would be the most powerful single force in helping to lift our total investment and consumption outlays to the levels required for the maintenance of maximum production and employment in view of the new technology.

(5) Natural resources: Federal outlays for this purpose could rise from about $1.78 billion to about $2.5 billion, from $9.63 to about $13 on a per capita basis, and from 0.36 percent to 0.39 percent of total national production. This would help to achieve and maintain an adequate resource base for national security, industrial expansion, rapid population shifts, increases in total population, and rising living standards.

(6) Other welfare services, including labor and manpower and public assistance: In this area, Federal outlays could rise from about $2.8 billion to about $4.2 billion, mostly in the area of public assistance, from $14.97 to $21.82 on a per capita basis, and from 0.57 percent to 0.66 percent of total national production. This would enable us, as a nation, substantially to eradicate the exceptionally heavy concentration of poverty among those handicapped in various ways through no fault of their own.

Other conference statements refer to the specifics of programs for a healthy agricultural economy, for a reasonable development of our natural resources, for pleasant and productive cities, for the desirable improvement of human welfare. We here affirm that not only can we afford these programs, but that they are imperative if we are to improve the public and private sectors of our economy.

Ministers Remove Temple Swastikas

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. HARTKE. Mr. President, the B'nai Jacob Synagogue in Fort Wayne was recently desecrated. The Reverend Elmer E. Voelkel, pastor of Plymouth Congregational Church discovered this desecration on his way to church on Holy Saturday and called six other Protestant ministers, who immediately came to B'nai Jacob Synagogue and helped remove the swastikas in a public demonstration of their sense of outrage.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article and editorial from the Gary Post-Tribune of April 18, 1960, telling of Fort Wayne's answer to bigotry.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

MINISTERS REMOVE TEMPLE SWASTIKAS

FORT WAYNE—Seven indignant Protestant ministers lent a hand Saturday to remove two red swastikas which vandals painted on the B'nai Jacob Synagogue during the night.

The volunteered "expression of brotherhood" came before the Jewish conservative congregation could take time on its Passover Sabath to assess the damage and looting inside.

"I saw the swastikas on my way to church this morning, and I called a few downtown ministers I knew would be indignant about this," said the Reverend Elmer E. Voelkel, pastor of Plymouth Congregational Church.

"It's a wonderful gesture," said Fred Tourkow, a past president of the congregation, as Voelkel and his Protestant colleagues came to clean off the red swastikas.

One of the yard-high swastikas was painted on stone at the front of the synagogue, and another was painted on a door.

"I'm shocked and amazed such a thing could happen in Fort Wayne," said Rabbi Seymour Weller. He said he knew of no reason for the vandalism.

Inside, a charity box containing an undetermined amount of cash donations was stolen, and offices were ransacked.

Also stolen were Menorah and Hannukah candelabra, sacramental goblets and other religious merchandise kept in a gift shop in the synagogue. Sacred objects in the sanctuary were not taken.

Voelkel said he made no attempt to recruit ministers outside the small group of his colleagues in the area near the downtown section and the synagogue, located on the near south side.

"We could get 20 or 30 or 40 ministers," Voelkel said.

B'nai Jacob is one of two Jewish congregations in Fort Wayne.

Voelkel was joined by ministers from Lutheran, Baptist, Methodist, Presbyterian and Episcopal churches.

OUTRAGE IN FORT WAYNE

All Hoosiers should feel a sense of outrage over the desecration of a religious temple in Fort Wayne. But they can feel encouraged also by the prompt action of Fort Wayne clergymen to endeavor to erase the shame.

Some time over last Friday night, while Christians were awaiting Easter and Jews were nearing the end of the Passover observance, burglars broke into a Hebrew synagogue. They damaged the interior, stole religious objects and $300 from a charity box. And then they painted swastikas on the front and rear of the building.

It was a shameful business, clearly the work of hoodlums. Such actions have occurred elsewhere, but it is particularly saddening to have them in our own State.

But what is intensely gratifying is the reaction by Christian clergymen of Fort Wayne. A group of them hurriedly assembled at the synagogue and gave their labors to help

remove the paint in a public demonstration of their sense of outrage.

A Congregational pastor, leader of the Protestant group, spoke for them when he said, "We're disgusted, we're angry, we're disturbed." He called for more vigorous efforts to uphold religious freedom in the community. And the bishop of the Catholic diocese deplored the outrage as "vicious and cowardly" as he condemned it publicly in the strongest possible terms.

Desecrations of religious institutions are un-American; they are a blow at all religions and should be denounced by all. We praise the quick reaction of Catholic and Protestant leaders in Fort Wayne as we express our contempt for those responsible for the outrage.

There is a lessen for all of us, however. Men of all faiths should be making greater efforts in behalf of religious freedom for all faiths. It is one of the foundations of America. It is as important as the right of free speech or free press.

Democracy Wins in Korea

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very interesting editorial which appeared in the Christian Science Monitor for April 26, 1960:

DEMOCRACY WINS IN KOREA

The end of the regime of President Syngman Rhee in South Korea has come in a way that helps to lay a potential base for true self-government in that Far Eastern land.

The veteran leader who has headed the Republic of Korea from its formation and brought it through the attack by Communist North Korea has at length had the wisdom to recognize that his strong man tactics plus the repressions exercised by his subordinates and the police have become deeply unpopular.

His offer to resign, to dismiss his chief lieutenant, Lee Ki Poong, and to accept a constitutional amendment for a government responsible to Parliament spares his country the prospect of further rioting and bloodshed beyond the student-led demonstrations which had cost more than a hundred lives.

The key demand of the demonstrators and of the opposition Democrats who challenged Rhee's Liberal Party was that new elections be held in place of those of March 15 which were discredited by a host of unfair practices. The President's capitulation might have meant that a new vote would be taken only for President and Vice President, but action in Parliament now has assured that new elections will extend to the replacement of the present Assembly.

It remains to be seen, of course, whether those who have brought about the downfall of the Rhee regime can erect a more competent and more truly democratic one in its place. The temptation to those who have won power by revolt is to use that power as ruthlessly against any who oppose them.

Examples of the need for resiliency in the democratic process are seen in two countries today where power has changed hands. One of these is Turkey, where the regime of Prime Minister Adnan Menderes has yet to prove that it possesses the magnanimity of former President Ismet Inonu, who permitted its peaceful displacement of his party. The other is Cuba, where Premier Fidel Castro still postpones the holding of elections after the revolution against former President Batista.

It is to the credit of the United States in this instance that under the guidance of Secretary of State Herter the administration in Washington has given no support to a situation which verged on dictatorship. On the contrary, through Ambassador Walter P. McConaughy, the State Department evidently helped impress upon Dr. Rhee the seriousness of the resentment to which his party's rule had given rise. This was the more fittingly an American function since the United States had sponsored membership for Korea in the United Nations.

One lesson that evidently needs to be learned from events of the past several months in South Korea, and it applies elsewhere, is that the police should be above party. Instead of instructing people how to vote, as was alleged, their function should be simply to see that a fair vote is held. The South Korean Army seems in this and other respects to have maintained a better standard, and this is an element of hope.

Two great necessities of democratic self-government have been illustrated in Korea: That leaders should not equate all opposition with disloyalty or subversion. And that they should allow for peaceful transition in response to the popular will.

Issuance of Masaryk Set of "Champions of Liberty" Stamps

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. BUTLER. Mr. President, in 1957 the Post Office Department inaugurated a "champions of liberty" stamp series to honor foreign leaders and fighters for liberty throughout the world. Among the "champions of liberty" to be honored to date are Ramon Magsaysay, Simon Bolivar, Lajos Kossuth, Jose de San Martin, and Ernst Reuther.

On March 7 of this year the founder and first President of Czechoslovakia, Thomas G. Masaryk, was commemorated with a stamp in the "champions of liberty" series. The following day in the office of the Baltimore postmaster, William F. Laukaitis, a large group of east Baltimore's Czechoslovak colony gathered to celebrate informally the issuance of the Post Office Department's stamp and the 110th birthday of President Masaryk.

Mr. President, I ask unanimous consent to have an article published in the Baltimore Guide of March 17 describing this memorable occasion printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCAL CZECHOSLOVAK COLONY MARKS HONOR STAMP ISSUE

A large contingent of East Baltimore's Czechoslovak Colony attended an impromptu meeting on March 8, held in the main post office, on the occasion honoring the 110th birthday of Thomas Garrigue Masaryk, regarded by the Czech people as their "father and champion of liberty," and President three times of Czechoslovakia before it became a Communist puppet state in 1948.

The event also featured recognition of the issuance of the Masaryk set of "Champion of Liberty" stamps in 4-cent and 8-cent denomination, which went on sale in Washington, D.C., March 7, Masaryk's birthday. The stamps are now available in more than 36,000 post offices in the United States.

It is the sixth of a series and, according to Postmaster General Arthur E. Summerfield, is the first stamp to reach so large an amount—$250,000—on its first sale day.

HONORED GUESTS

Attending the local event at the post office were: William F. Laukaitis, Baltimore postmaster; Joseph Mach, State senator, Second District; Frances Holub, member, house of delegates; Clement Prucha, city councilman; Father Thomas Kozlovsky, St. Wenceslaus Church; Joseph Bilek, past president, Bohemian Sokol Gymnastic Association; Anthony Cihlar, associate editor, Hlasatel Newspaper; Edward Stetka, instructor, Sokol gymnasts; Mrs. Anthony Peroutka, president, Augustine Herman Group of the Women's Civic League; Mrs. Agnes Svejda, president, Augustine Herman Historical Society; Mrs. Agnes Rys; Mrs. Tina Shimanek; Mrs. Bessie Rokos; Mrs. Barbara Stepan; Mrs. Angela Peleska; Mrs. Anna Tich; and little Barbara Stepan, who was photographed in colorful Czechoslovakian costume with Mr. Laukaitis.

TRIBUTE PAID

Mr. Laukaitis paid gracious tribute to the nationality groups of Baltimore, with special emphasis on the worthy contributions of the local Czechoslovakian group to the city's civic, religious, and political programs.

On the program were: James Primus, John J. Drsata, Warren M. Bloomberg, Joseph Mach, Mrs. Holub, Mr. Prucha, Mr. Cihlar, Mrs. Peroutka, and Mr. Laukaitis.

Qualified Negro Voters in Richmond, Va.

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. ROBERTSON. Mr. President, much has been said in the recent civil rights debate to imply that Negroes are disfranchised in the South by systematic and oppressive discrimination on the part of white persons.

With respect to my own State, I would like to call the attention of my colleagues to the situation in the Capital City of Richmond. An Associated Press dispatch of April 23, 1960, shows that the number of qualified Negro voters in Richmond has virtually doubled in the last 6 years, while the number of qualified white voters there has risen only slightly during this period, actually dropping by 2,500 in the past year.

This further supports the statements I have made repeatedly to the effect that Virginia's voting laws are absolutely free of racial bias, both in their language and in their application. I know of no case and have heard of no case in which a Virginia citizen of the Negro race has been intimidated, threatened,

harrassed, or prevented in any way in his efforts to register or to vote.

I ask unanimous consent to have printed in the Appendix of the RECORD the Associated Press dispatch to which I referred.

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

RICHMOND, VA., April 23.—The city of Richmond had 51,362 white and 15,641 Negro qualified voters as of April 1, reports to the State board of elections showed Saturday.

Comparable figures for a year ago showed 53,858 white and 15,364 Negro qualified voters. Thus, in the last year, there has been a decrease of about 2,500 white voters and a slight increase in Negro voting potential.

Since 1952 the number of Negroes qualified to vote in Richmond has almost doubled—from 8,737 to the present 15,641. Over the same period the number of white qualified voters has risen from 48,380.

The 1960 total of 51,362 white voters inside the city represents a decline, however, of more than 4,000 from the 55,666 reported in 1958.

City officials said the decline was caused by the movement of white voters from the city proper to the suburbs.

In contrast to Richmond, the adjacent counties of Henrico and Chesterfield have shown huge increases in the number of white voters since 1952. Henrico's white voters have increased from 12,793 to 33,246, while the number of qualified Negro voters in the county increased from 475 to 956 over the 8-year span.

In Chesterfield the April 1960 tabulation showed 12,625 white and 1,320 qualified Negro voters as against totals of 6,975 and 985 for 1952.

Retirement of Herman B. Wells, President of Indiana University

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. HARTKE. Mr. President, we in Indiana have been extremely proud of our excellent system of State colleges and universities. One of the best of these, for many years, has been Indiana University, whose activities have been guided for 25 years by the very able and distinguished Herman B. Wells.

Dr. Wells left the university only briefly during this period to serve his country at the request of President Truman, setting up the Marshall plan program in Greece, which has been credited with helping to keep that country free and Democratic, although under extreme Communist pressure.

Dr. Wells recently announced his retirement.

I ask unanimous consent to have printed in the Appendix of the RECORD, an excellent editorial of tribute to Dr. Wells by my good friend, Paul L. Feltus, editor of the Bloomington (Ind.) Star-Courier, a longtime trustee of Indiana University.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bloomington (Ind.) Star-Courier, Apr. 14, 1960]

PRESIDENT WELLS' RETIREMENT

Announcement of the retirement in 2 years of Herman B. Wells, president of Indiana University, came as a shock to the general public.

As a matter of fact, however, Dr. Wells' retirement after 25 years' service had been a tacit agreement for several years. Only the approval of the board of trustees to their president's retirement as an official act was necessary.

Those close to Indiana University affairs regard the president's retirement as a part of the "Wells Master Plan" in the course of his years of distinguished service.

After his retirement on July 1, 1962, during the year in which Dr. Wells will have reached the age of 60, his services will not be altogether lost to the university. At that time it is planned that Dr. Wells devote his efforts to the further development of the research division of the Indiana University Foundation, a capacity in which, as he pointed out, "affords an opportunity to help make a great university greater."

This is an area of the university to which President Wells has always had a great devotion, and only a dreamer of dreams can forecast what great achievements he may bring to fruition there.

In the matter of choosing a successor to President Wells, the board of trustees has had ample notice in which to proceed in an orderly manner.

There will be speculation, especially among many educators, as to whether a great administrator like Dr. Wells will be selected, or whether greater emphasis may be placed on a man of high scholarly reputation.

It is unlikely that any educator could have exceeded the accomplishments of President Wells in building up a scholarly faculty.

University business is big business. And President Wells' achievements as a great administrator have never lost sight of the need for scholars of distinction. It has been a part of the business of a great university.

Description of Blood Bank of Delaware, Inc.

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. FREAR. Mr. President, I am very proud to serve as a director of the Blood Bank of Delaware, Inc.

The blood bank is a "neighbor-to-neighbor" nonprofit blood procurement program, which assures its subscribers of all the blood replacement they may need to supply cooperating hospitals a two-for-one pint replacement of blood given members.

The basic strength of the blood bank plan is that it transfers responsibility from the few to the many. It is in the best tradition of our country where neighbor helps neighbor in time of greatest need.

I ask unanimous consent that a description of the Blood Bank of Delaware, Inc., made available to me by its president, Mr. James F. McCloskey, be printed in the Appendix of the RECORD.

There being no objection, the description was ordered to be printed in the RECORD, as follows:

THE BLOOD BANK OF DELAWARE, INC., WILMINGTON, DEL.

The Blood Bank of Delaware, Inc., is not, accurately speaking, a blood bank. It is a "neighbor help neighbor" nonprofit blood procurement program, which assures its subscribers of all the blood replacements they may need to supply cooperating hospitals a 2-for-1 pint replacement of blood given members.

Before the plan was established, the nine community hospitals in Delaware obtained blood supplies in the usual manner; by getting relatives and friends of patients to make replacements for blood used; by purchasing from professional donors; by purchasing from blood banks situated in large cities in nearby States.

Because these methods failed to maintain a reasonable supply of blood at all times, a better method was sought. The result was the opening on May 16, 1955, of the Blood Bank of Delaware, Inc. Since then this plan has grown from the original 14 subscribers to the current total of 45,000 (April 15, 1960), who take their turns providing blood to the nine hospitals. In nearly 5 years of operation, the plan has met all its obligations to hospitals and subscribers. Also, it has built up and maintains an adequate reserve supply of blood at the participating hospitals.

THE SUBSCRIBER

The membership requirements are simple: the head of a family, as a subscriber, agrees to pay a $1 initiation fee, plus $1 a year in dues. He also agrees to supply 1 pint of medically acceptable blood (meets National Institute of Health Standards) when called upon to do so.

His first call to donate blood is determined by a name drawing similar to a lottery, from the list of subscribers who have yet to donate. Once he donates his pint he is not called upon again until every other subscriber in the plan has met his obligation. Thus, under normal circumstances and with the present enrollment, a subscriber will be called upon only once in 7 or 8 years.

However, the regulations provide that a subscriber may be called upon to donate one pint of blood in any one year. This is intended to cover blood needed in an officially designated disaster, local or national, or in the event of war. At such times, blood over and above the needs of the plan members may, by decision of the plan's board of directors, be given to or through accredited agencies in the State or Nation.

SUBSCRIBER'S BENEFITS

In return for assuming the obligations of membership, a subscriber and his dependents (those shown on his Federal Income Tax return) are entitled to receive blood replacements without charge for any blood transfusions given in any of the nine participating hospitals. No limit is placed on the number of pints they may receive. Incidentally, the dependents are not required to donate blood to the plan, only the subscriber.

The blood is replaced in the hospitals at a two-for-one rate by the donations of the plan's subscribers.

In addition, subscribers and dependents are covered by the plan while out of State on business or vacation trips anywhere in North America. In these emergency cases, the plan replaces or pays for blood at the rate of one-pint-for-one. The plan will not provide benefits at this time to persons who go to out-of-State hospitals for planned surgical operations or planned hospitalization. This last type of coverage is expected to be offered within the next several months, either by some method of cooperation with other State programs or through payment by

the plan. If the plan cannot afford to pay for all blood used in such cases, it may agree to pay for part of it.

An out-of-State resident employed in Delaware may join the plan under a restricted contract, (initiation fee, annual dues and blood obligation are the same as those for Delaware residents) by which he and his dependents may receive blood replacements for blood transfusions given in any Delaware hospital. The contract is restricted in that under no circumstances does it provide any out-of-State benefits.

Once a year the subscriber is billed for his family membership dues of $1. Failure to pay the dues in the month in which it falls due subjects the subscriber to a penalty of 50 cents, and unless the dues and penalty are paid within 30 days the contract is canceled. To be readmitted he must apply as a new member. The fact that he may have given a blood donation does not alter the situation.

No one is refused membership. There are no religious, racial, health, or age requirements. People over 60 years of age are welcome. Persons afflicted with chronic blood diseases are accepted without question, even cases known to require large quantities of blood. Helping these unfortunates does not appreciably shorten the period (7 to 8 years) between calls on donors. Besides, subscribers realize that one day they, too, may want the help that they now provide for others.

The plan works closely with the hospitals. No donor gives blood unless a hospital requests it. When a request is received, the plan contacts the prospective donor, who has been notified previously that he must stand ready to make a donation. Working with the hospital, the plan office arranges an appointment for the subscriber. If, for any reason, the subscriber is not accepted by the hospital, he is given time to provide a substitute donor or, if he prefers, he may send $25 to the plan office in lieu of a blood donation (this sum may be paid in installments). Failure to fulfill his obligation automatically cancels a subscriber's contract, and he is denied benefits for himself and his dependents. Even though he later applies for reinstatement, he will not be accepted until he fulfills the blood obligation, and must then wait for 30 days before he or his dependents are again eligible for benefits.

The plan's 45,000 subscribers with their dependents number approximately 150,000 persons, one-third of the State's population. It is anticipated that this year the plan will save its members a total of $100,000.

Since its beginning, the plan has supplied 12,000 pints of blood at the established rate of 2 pints for 1. It has filled all requests from the participating hospitals and has paid for all blood required by subscribers in out-of-state emergencies. It has demonstrated not only that it can maintain a constant reserve supply of blood in hospitals, but at the same time, can provide blood in large quantities within a short period after a hospital request is received.

THE HOSPITALS

The plan does not pay for cross-matching or the administration of blood. Charges for these are made by the hospital.

Under normal circumstances, the plan provides blood only to replace that given members. Once blood is donated, it becomes the property of the hospital.

The plan is not obligated to give the hospitals any specific type of blood. The hospital, under its contract with the plan, is responsible for supplying a plan member with the specific type blood he needs. This is one reason why the two pints for one replacement is not regarded as excessive at this time. However, when the donor is accepted by the hospital, his blood type becomes known and is passed on to the plan for future reference. Since no subscriber is called upon to donate twice until every other subscriber has met his obligation once, the plan eventually will have a complete file on donors' blood types, and then the plan will be able to supply the specific type of blood needed.

THE ORGANIZATION

The corporation's board of directors is composed of approximately 75 prominent citizens of Delaware with the Governor of the State as honorary chairman. Board members include our U.S. Senators, Congressman, Secretary of State, an ex-Governor, some city, county, and State officials, as well as representatives of industry, labor, medical, hospital, civic, fraternal, patriotic, religious, and racial groups.

The Blood Bank of Delaware's staff has grown as the plan has grown. At the present, it includes seven full-time members headed by an executive director, whose duties consist of speaking before groups, calling on employers, arranging for distribution of applications, arranging publicity for radio stations and newspapers throughout the State. The office manager coordinates the many activities of the plan's busy office. One employee is responsible for receiving membership applications and renewals, and for prompt handling of all mail pertaining to this phase of operations. Two employees make arrangements for subscribers to donate blood. They send out notices cautioning the subscriber that he may expect a telephone call in the near future, when arrangements will be made for him to go to a hospital. One employee is in charge of files, plus the printing and folding of applications. Another employee has charge of making addressograph plates and using them in preparing the pieces of mail sent out. Occasionally, the plan uses some part-time or volunteer help, but tries to confine its work to its own staff.

Expenses at present average about $40,000 annually. Our goal is 125,000 subscribers in the next few years. Income from such a number could create a surplus. The cost of handling the larger membership would be another $10,000 to $25,000. This would make possible a second office in the lower part of Delaware to assure members there of first-class service. Income over and above present and future needs has been thought of as a fund that may be used for: (1) the establishment of a centralized State blood bank, (2) the purchase of a headquarters building or buildings, (3) blood research.

The money received from subscribers in lieu of blood donations goes into a fund for purchase of blood needed by members in out-of-State emergencies. When this fund reaches a sufficient amount, it also will be used to defray the cost of out-of-State surgery and hospitalization. From time to time the plan has borrowed from this fund to buy office equipment, or to help meet operating costs. It may be of interest to know that the plan has paid for over $18,000 worth of office equipment.

PUBLIC RELATIONS

The plan has sought and enjoys excellent cooperation from doctors, hospitals, radio stations, newspapers and its members. Even so, the staff still finds that many people are reluctant to join because they do not like the thought of being called upon to give blood. But because encouraging reports from those subscribers who have given blood are constantly circulating this fear is gradually disappearing. This, together with the word-of-mouth commendations of those who have benefited from the plan makes the task grow easier each month.

The subscribers who have made donations are the plan's most loyal members. Merely by paying their dollar in dues each year they and their dependents are assured of help for 7 to 8 years in normal times. They have a vested interest of which they become very proud.

To reach the public, all media of communications are used. The plan distributed over 60,000 applications last year to the public, private, and parochial schools. Students were instructed to take the applications home to their parents. Again this year, the plan has the complete cooperation of school officials in placing applications in the hands of new students. Many radio programs, full- and part-page newspaper advertisements, and roadside billboards have been used throughout the State. Clergymen of all faiths have assisted by informing their congregations of the plan's benefits.

Many employers pay for their employee's memberships. Some labor unions cover their members. This type of cooperation assists the plan greatly because it means one-time billing for entire groups. The employer is learning that the $1 in dues per person is one of the best investments he can make. However, the plan urges the employer not to use pressure on an employee to join, because the employee must be responsible for his blood donation when called. In some cases, the plan has suggested the employee pay the $1 enrollment fee while the employer provides the annual dues.

The plan's low operating cost in its 5 years demonstrates that large sums of money are not a necessity in any community where there is a hospital and a group of good people who are willing to devote time to such a worthwhile enterprise. At times during the growth period the plan has been poor financially, but it has always been rich in available blood for its members.

One important benefit of the plan is that it assures a much better supply of blood for holidays and at other times when people are less likely to give. This does away with the frantic appeals for blood by newspapers, radio and television that occur in so many areas of our country at such times. It could be of incalculable value for civil defense in time of need.

The cost of membership is so low that few can say they are too poor to pay the dues—and few so friendless that they cannot find someone to act as a substitute donor if they are unable to provide their required pint of acceptable blood.

The plan saves blood because hospitals are assured a more dependable supply through this system than through most voluntary donor programs.

The plan's basic strength is that it transfers responsibility from the few to the many, and, like all tasks so shared, makes the difficult easy. It is in the best tradition of our country where neighbor helps neighbor in time of greatest need. Our plan strives to do the greatest good for the greatest number at the least possible cost.

War by Subversion

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. THURMOND. Mr. President, the able associate editor of the Charleston (S.C.) News and Courier, Mr. Anthony Harrigan, has written a very excellent article entitled "War by Subversion," which appeared in both the News and

Courier and in the magazine U.S.A. This article stresses the need and importance of countering the war techniques of communism, and as such merits the attention of the Congress and our country.

I ask unanimous consent that the article as printed in the magazine U.S.A., on April 22, 1960, be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAR BY SUBVERSION

(By Anthony Harrigan)

The United States is prepared to fight a war with missiles and ships, but it is unprepared to fight war by subversion. That's the kind of war that world communism is waging against the American people.

When the Communists launched a "Save Chessman" campaign in Uruguay, they engaged in war by subversion. The United States was unprepared to counter the "Save Chessman" move. It was calculated to make the United States look bad on the eve of President Eisenhower's visit to South America. The State Department reaction was defensive and infuriating to the people at home.

If the United States were prepared to fight the Communists with weapons the Reds understand, the Chessman movement in Uruguay would have been squelched. A group in Uruguay would have been busy stirring the people of that nation to anger against Red imperialism. Prominent Uruguayan intellectuals would have condemned Mikoyan's visit to Cuba. Mass rallies would have been held, protesting the loss of press freedom in Cuba.

But the United States hasn't the apparatus for staging counterrallies, enlisting writers and public figures on our side, or launching protest groups against communism. Therefore, the United States is enormously handicapped in dealing with the Communists.

The billions that the United States spends for missiles, nuclear submarines, manned aircraft and ground forces provide a deterrent against Soviet military attack. But the U.S. Armed Forces, as now organized, are not a deterrent in vital areas.

To win friends and influence people, the United States spends money through foreign aid. But the money is not spent on strategic political projects. Instead of subsidizing writers and influencing newspapers and magazines, as the enemy does so effectively, the United States builds roads and dams abroad, for which Red politicians later take credit.

The Soviet Union depends neither on military power nor vast aid programs to achieve its programs in this hemisphere. Before long, Soviet missiles may be based on Cuban soil. But it won't cost a single Russian soldier or the loss of a ship or plane. The trade pact the Soviet Union signed with Cuba is basically a barter deal, an inexpensive arrangement for any big nation.

The Soviets are getting results in Cuba because they have spent money judiciously on political subversion. They have fed money to people who are operating in all departments of the Cuban Government. They have concentrated on the essentials of war by subversion—propaganda, infiltration of the Government and the universities, subsidizing friends and manipulating mobs.

Few Americans have even considered that the United States might adopt the same war techniques. When it is suggested, many Americans hold up their hands in horror at the idea.

"We don't play that way" is the prevailing American reaction.

Well, what's taking place in Latin America isn't play; it is war, though the guns are silent. A country that refuses in wartime to adopt winning tactics is a country destined for defeat.

What the United States is buying in the Central Intelligence Agency is not clear. Judging from the lack of results in Latin America, the CIA confines itself to sleuthing and preparation of intelligence estimates.

The United States should get more for its money out of the CIA. It should get a countersubversion operation against world communism.

What does that mean? It means a concerted and continuing program of secret activities to undermine enemy operations. In Latin America, for example, it means the secret organization and supply of anti-Castro groups and parachuting them into Cuba.

"But we couldn't do that," some people may say. "We maintain diplomatic relations with Cuba."

While not many persons may know it, the United States has recruited intelligence agents in this country and dropped them behind the Iron Curtain. If U.S. agents can be parachuted into Hungary, they can be dropped into Cuba.

This sort of warfare is something new to Americans. But the necessity for fighting fire with fire becomes apparent as communism gains strength in this hemisphere. In meeting the challenge of Soviet war by subversion, in which weapons and campaigns are unconventional, the defense must also be unconventional.

It is not enough for the United States to be ringed with ships and guarded by missiles. The United States must be prepared to bring its power to bear in government ministries, newsrooms, editorial offices of intellectual journals, radio and TV stations, university classrooms, and at mass protest rallies. Power that cannot be brought to bear in decisive situations is wasted power.

Without much delay, the United States must learn how to use its power secretly and from inside a nation, adopting all the political techniques that American ingenuity can devise.

The Student Loyalty Oath

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most thoughtful and well-reasoned article by our colleague, the Senator from Minnesota [Mr. MCCARTHY]. In this article the Senator from Minnesota analyzes with both historical and philosophical understanding the case against the inclusion of special loyalty oaths in educational legislation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A QUESTIONABLE TREND—THE STUDENT LOYALTY OATH

(By EUGENE J. MCCARTHY)

The National Defense Education Act of 1958 requires a loyalty oath from those who apply for loans and an affidavit disclaiming belief in any organization which advocates overthrowing the Government by unconstitutional means, or their support of any such organization. A proposal to modify the loyalty oath provision of the act is again moving through the committees of Congress.

Last year Senator KENNEDY brought to the floor of the Senate an amendment which would have repealed both the oath and the affidavit. Speaking for his committee, he accepted on the floor of the Senate an amendment restoring the affirmative loyalty oath. However, even this modified proposal was rejected by the Senate.

Now again the opposing lines are being drawn. On the one side are various veterans' groups, patriotic societies, and individuals who argue that no one should hesitate to take a positive oath of allegiance to the country, and that no loyal young American should hesitate to declare his anticommunism. On the other hand, there are those opposed, including some spokesmen for the administration, presidents of colleges and universities, professors, and others who argue that both the oath and affidavit are unnecessary, ineffective, or discriminatory. The middle ground between these two positions is also occupied. In this area are those who for the most part are willing to accept the positive oath of allegiance, but are strongly opposed to the disclaimer affidavit.

To me the central issue in this controversy seems to be not one of loyalty or of security, but rather one of propriety.

No one can seriously believe that the basic security of the Nation will be drastically affected either by the continuation of the oath and disclaimer, by modification of them, or by removing them completely from the law. Certainly, no convinced Communist would hesitate to swear falsely. On the other hand, no one can prove that the integrity of the academic community will be destroyed if the oath and disclaimer are retained in the law. Our educational system is strong; students and educators are resilient; students have demonstrated that they can stand effectively against faculties; faculties seem to survive despite administrations; administrations seem to survive despite the regents, as in the case of State universities; boards of regents seem to survive despite State legislatures. All have had to put up with many difficult and disagreeable things.

What is called for in this matter is judgment on the part of Congress as to whether or not the general welfare of the country has been protected or advanced by the inclusion of the oath or affidavit in the National Defense Education Act. There are several general principles which must be considered here.

First, it is important that the history of the nature of oath taking be considered. The taking of an oath in Western civilization has always been considered as important. It has been an act of great religious as well as civil significance, and the use of the oath has generally been restricted to serious decisions.

Traditionally, oath taking has been surrounded with formal ritual, reflecting the solemnity of the occasion and the importance of the act both to the individual who took the oath and also to the community in the service of which it was taken. The oath taken by the President, the Vice President, the Members of Congress, the judges of the courts, members of the armed services, is a sign and public manifestation that they are making a serious decision; that they are performing a very special kind of act of dedication to the public welfare. It shows that they are taking up vital work of the community. The oath is a reminder to them of the importance of their responsibility, and it is also a public declaration to the people of the country that they are accepting these very special responsibilities.

The fundamental sanction of the oath is the name of God. It is not an unrelated declaration to say that no man should take the name of the Lord in vain.

Oath taking loses something of its significance and of its dignity and, I think, too, something of its effectiveness if it is used commonly or lightly, without preparation, without due cause, without adequate ceremony. The dignity of the oath is lowered when an oath is used in a routine manner, as a mere step in the paperwork of making a loan. The oath should not be taken without reflection, without identification with public service. We should go slowly in extending oath taking to cover minor relationships of the state and its citizens. But making a loan to a student to enable him to go to college is essentially a personal financial contract. It is my opinion that such action taken alone does not merit the dignity of an oath such as is now required in the National Defense Education Act. This proposal comes very close to putting a cash value on patriotism.

The second principle which has bearing on this decision is fundamental to democratic society and democratic government. Democracy implies an affirmation of confidence in the integrity and responsibility of the individual person. In a democracy it is assumed that an individual is innocent of crime unless he is proven guilty. As far as his general acts as a citizen are concerned, it should be assumed that he is loyal until he has been proved to be other than loyal.

Democratic government acknowledges that the individual has personal responsibilities; that he has certain unalienable rights inherent in his nature as a man, and because of this nature, he must be given a measure of freedom and also a measure of responsibility for self-discipline which is outside the power of any group or any institution, including the state. There is a place for loyalty oaths and for oaths of allegiance in democratic society, but such an oath should not be presented ordinarily in a negative context, but rather as a proud and public affirmation of dedication to duty.

The record of history shows quite clearly that it has been the tyrannies—the tyrannical governments, the absolute monarchs, the totalitarian states—those governments which were most uncertain of themselves or which were on the verge of collapse that have made oath taking a rigid, common, if not universal, requirement. In our own generation we need go back only to the Nazi period in Germany. Under that regime every time a citizen of Germany met another citizens on the street, he was expected to raise his hand in salute and say, "Heil Hitler." This was an oath of allegiance or at least a declaration of his allegiance to Hitler and to the Nazi movement. Certainly this was not evidence of a vital living society, of a society made up of free men, but rather it was a sign of uncertainty, of hesitation, and of fear.

Basically, these are the considerations that are involved in the current debate; not in the same degree, of course, but certainly in substance. For the absolute monarch and for the tyrant, oath taking becomes a device to harass, to threaten, and to control citizens. Loyalty oaths of this kind are no real contribution to the security of a nation of free men, but rather a manifestation of insecurity reflecting a fear of Government officials and others who seek to intimidate and frighten others and thus to reassure themselves.

I do not suggest that the loyalty oath in the National Defense Education Act is of this order. If it could be isolated, it might well be said to be insignificant, but there is danger that it will establish a trend which will not do honor to democracy or to the traditions of the United States. To extend a requirement for loyalty oaths to more and more relationships which are relatively unimportant or which are personal or which are socially insignificant is to run the danger of undermining our traditions and at the same time of destroying confidence in democratic government and in democratic institutions.

This danger was recognized in the very beginning of our Nation. I am sure that Thomas Jefferson would not have been happy at the prospect of imposing loyalty oaths on students seeking loans to enter the University of Virginia when that institution was established, for he said that he regarded it as "based on the inimitable freedom of the human mind. For here," he said, "we are not afraid to follow truth wherever it may lead, nor to tolerate error so long as reason is free to combat it." And following the Revolution, even the conservative Alexander Hamilton opposed the expurgatory oath which was designed to weed out the Tories in New York. Hamilton said that this oath would have the following effect: "To excite the honest and conscientious and to hold out a bribe to perjury. * * * Nothing could be more repugnant to the true genius of the common law than such an inquisition * * * in the conscience of men."

There is an interesting report on the matter of oath taking in Clarendon's "The Rebellion and Civil Wars in England." According to this history, in the year 1639 when King Charles was proceeding against the Scots, it was proposed that all members of the English nobility make a special protestation of their loyalty and obedience to the King and disclaim and renounce any intelligence or correspondence with the rebels. Two members of the English nobility, Lord Say and Lord Brook, refused to profess their loyalty to the King. They said, "If the king suspected their loyalty, he might proceed against them as he thought fit; but that it was against the law to impose any oath or protestation upon them which were not enjoined by the law; and, in that respect, that they might not betray the common liberty, they would not submit to it."

Finally, I think the decision on this question should take into account the principle that professional groups generally should govern their own members. Just as we assume that in a democracy every citizen will be loyal, so too we expect each profession to determine its own goals and to adopt its own procedures and rules for disciplining its own members. Sound democracy reserves the authority of government intervention only to those cases in which the common good is clearly threatened by failures by other groups or institutions.

We expect, for example, that the American Medical Association will promote medicine without government threat and that its members will abide by the Hippocratic oath and the other standards of the profession. It is common practice to permit the bar association to determine rules for admission and rules for practice and to discipline its own members. Each one who is admitted to the practice of medicine or of the law or to the other professions pledges faithful performance of his duties; indeed, the word "profession" itself is drawn from the action of professing or of taking an oath publicly.

The academic profession in turn has its own goals and its own responsibilities. Colleges and universities have a common purpose; namely, to help students seek and acquire truth. Each institution has its unique traditions and objectives. A student when he enters a college or university makes an implicit pledge of fidelity to the purpose of the university. If he does not adhere to its standards, he is likely either to withdraw or he is subject to expulsion. As a student, his professional responsibility is the concern of the college, and college authorities are expected to keep him alined through a variety of efforts not excluding an appeal for loyalty to the "crimson," or to the "blue," or to the "maroon and gold," as the case may be.

Of course, it might be well if the very act of entering upon the work of gaining a college education were made an occasion of great public significance, and a public declaration of dedication called for. It might be desirable that all students who enter college take such an oath to remind them of the special social significance and social responsibility that go with education and to stir them to more solemn dedication to the fulfillment of the responsibilities that go with learning. But this is not the loyalty oath of the National Defense Education Act.

For the Government to intervene in the professional controls now exercised in our colleges and to take steps which purport to guarantee loyalty of students requires substantial evidence that the colleges have failed in self-discipline. I do not believe that the proponents of the loyalty oath have seriously questioned the loyalty of the academic community, faculty or students, nor do they declare that in fact any pattern of disloyalty actually exists. To my mind, the available evidence argues for continued confidence in the ability and integrity of teachers and administrations and also of American college students. I firmly believe that the basic issue here is really one of the propriety of oath-taking, of respect for the traditions of this Nation, and of the fundamental demands of democracy.

Development of Rural Areas Through Industrialization

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27, 1960

Mr. MAGNUSON. Mr. President, a very distinguished resident of Arkansas addressed the annual convention of the American Bankers Association, at Miami Beach, Fla., in October of last year. It was a well-thought-out speech, relating to a well-thought-out program.

I call the attention of the Senate to the address made by Mr. Winthrop Rockefeller, chairman of the Arkansas Industrial Development Commission, and I ask unanimous consent that his splendid address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed the RECORD, as follows:

DEVELOPMENT OF RURAL AREAS THROUGH INDUSTRIALIZATION

(Address by Winthrop Rockefeller, chairman, the Arkansas Industrial Development Commission)

Gentlemen, I must warn you.

I am an honest but nonetheless eager broker for Arkansas.

For the past 5 years I have spent a good part of my time telling business people about the rewards of investing in Arkansas.

Now such an opportunity as this—a roomful of bankers—is rare (more than any broker could hope for) and I am compelled from occupational habit as well as deep conviction to talk a little about Arkansas. Therefore, I shall begin and end my remarks by asking each of you to keep Arkansas in mind, especially when you weigh investments for manufacturing plants in the South and Southwest.

I have learned firsthand that Arkansas offers many real advantages to the investor. But before I spell out some of these advantages, I must explain that they are rooted

in serious problems common to all low-income rural regions. These problems are the very ones which are of so much concern to our industrial commission and to those engaged in national rural development.

THE SOUTH'S MAIN PROBLEM

Everyone knows that low income is the South's main problem. But not everyone knows that this low-income problem consists basically of having too many people for too few jobs, and too meager an income opportunity within the existing farming system.

The South has more than its share of the Nation's youth and more than its share of the older people. This can only mean that each person of working age must support more than his share of dependents. To make matters worse, the South has less than its share of employment opportunities. Those employment opportunities which exist are concentrated mostly in farming, and farm incomes nationally are must lower on the average than nonfarm incomes. Even among Southern States, Arkansas falls below the average in income per farm.

AIMS OF RURAL DEVELOPMENT

It is this surplus of people and this shortage of jobs which has caused the people of Arkansas to look at industrial development as a panacea. I think their view is substantially correct. However, I would not want to leave the impression that our industrial commission believes that industry alone can solve all problems of rural areas. We give hardy assent to the other aim of the national rural development program. We believe that a particular wisdom outlined its threefold aims of: (1) Strengthening industry in low-income areas and widening the range of off-farm job opportunities; (2) helping families who want to stay in farming gain the tools, land, and information that will permit them to farm successfully; (3) helping all people in these areas arm themselves with adequate training and good health.

On the first objective—strengthening industry—I shall make several comments, based on my own experience and the experience of our industrial commission's staff. But, first, I should like to mention briefly agriculture, education, and health, as they are emphasized in the rural development program.

Although I am not an agriculturalist by training or long experience, I have learned much in the past 7 years while creating Winrock Farm and developing a herd of Santa Gertrudis cattle which—I am happy to report—is attracting the attention of my fellow cattlemen.

The experience I have gained confirms a conclusion reached by thousands of farmers, as well as farm economists—namely, that the 40-acre farm is becoming increasingly rare as an economic unit. The trend has perforce been to mechanization in order to reap the benefits of larger unit operations. The owners of small farms, often logically and always understandably, do not want to abandon the land which has been owned by their families for generations. Yet they are faced with the alternatives of selling at a financial loss and moving to more populated areas or of finding outside employment to supplement their meager farm earnings. The latter alternative is the hope of a large majority of these people, a hope that should be sustained.

We of the Arkansas Industrial Development Commission are pleased that much of the new industry coming to Arkansas is selecting the smaller communities—almost, as it were, to fulfill the hopes of many of these fine people who want to stay on their land.

Changes are also taking place in education and medicine. The consolidation of school districts, running hand in hand with the development of a network of better roads, is making possible better educational opportunities. Better medical facilities are also available for the improvement of health standards. To be sure, this progress is often made at the expense of the old family physicians, who traditionally dealt not only with the health needs of his patients, but served as family confidant and adviser as well.

WHEN INDUSTRY DECIDES TO MOVE

Now concerning the No. 1 aim of strengthening and locating industry in low-income areas and widening the range of off-farm opportunities: How do we go about it? And how can people in the rural areas organize themselves so as to be more effective and to participate more fully in the rural development program?

One of our commission's problems is to convince people living in rural areas that industry itself decides when and where to expand. This management decision usually takes place within the framework of an annual capital budget. It is based on forecasts of long-term sales growth and considerations of competition.

Once the decision to budget capital for a new plant is made, someone in the company is assigned the responsibility for determining just where the additional plant capacity ought to be located. In many cases the expansion takes place right at the existing plant location; and of course a good part of the industrial expansion in Arkansas is occurring in existing plants. But sometimes the expansion requires a new plant at a new location. It may be that production facilities have to be located nearer to the newer and growing markets of the South and Southwest; it may be that new sources of raw materials, fuels, and quantities of good water are required to meet the needs of rapidly expanding production. Or it may be that a large supply of efficient labor must be found. Whatever the case, each company frames and weighs these questions differently, and each company wants specific information suited to its own needs. Only after selecting the broad geographic region in which it wishes to expand is the company ready to seek outside help and to search out information about specific locations within that broad region.

AIDC ACTS AS PRIVATE CONSULTANT

At this stage, industrial development agencies like ours are a great asset to industry. Our commission can be of tremendous help to the site-seeking company, precisely because we make it our business to know more about our region and Arkansas than anyone else, and because we present information to fit the company's particular requirements.

We start with the company's needs rather than our desires.

Today we have more than 200 companies which we consider active prospects because each has asked specific questions about Arkansas. Our staff prepares individual reports for these companies by drawing upon the resources of a wide range of public and private agencies which help supply complete factual answers to all questions. This service is confidential, and we follow up by guiding company representatives on a tour of the State to help them confirm all the information needed to make a final choice.

Our commission's role as a private consultant to industry is but one part of the big job we have assumed. Much work is in progress at the community level. Plant location consultants on our staff can bring the company's representative only to areas of Arkansas already preselected. It is up to the local community to provide the facilities and environment which make it attractive to industry. At the present time, our commission is working with 138 communities to help them prepare for industry, through our six-point self-help program. We also work with a group of nine utilities in an annual yearlong community improvement contest. However, we have found that the preparedness job at the community level is usually too big for voluntary committees alone. A full-time local development man is needed to carry out an effective program, which not only enables the community to present itself in the most favorable light, but which brings together financial and real estate interests so that a satisfactory agreement can be reached with the company representative.

How then, can this smaller picture of the industrial development process be related to the national rural development program?

THE RURAL COMMUTERS

First, one of the harsh facts to be reckoned with is that industry traditionally has not been too interested in expanding into isolated rural areas. For over a century now industry has flourished in the great urban centers simply because there it found a concentration of workers within walking distance of the factory. Industry also depended upon the big city for power and water, and it often regarded the same big city as a major market for the goods it produced. The whole history of industrialization then has been the history of urbanization.

If our efforts to strengthen industry in low-income areas are to succeed, we must try to crossbreed industry with agriculture—to domesticate it—as it were, to a more pastoral existence. This proposal is not as farfetched as it may seem at first, because the same technology which made the 40-acre farm obsolete also freed the factory from its ties to the big city. No longer do large numbers of workers need to live within walking distance of their place of work. In Arkansas it is quite common for workers to drive 20, 30, even 40 miles to their places of work. Today, electric energy is available in the remotest areas, and manufacturers produce for national and international markets as well as for local ones.

Of course, industry in 1959 still has many secondary requirements which bind it to urban centers—transportation facilities, financial institutions, municipal services, communication centers, business services, and suppliers, to name a few. And the key people that industry needs—its skilled workers, its engineers, its manager—are accustomed to the amenities of urban living * * * the supermarkets, the schools, the concert halls and other services and diversions. It is such remaining requirements which must be reconciled with the aims of the rural development program. And in view of this reality, I personally think that the industrial development of a rural area must be focused on the larger of the area's small cities.

THE AREAWIDE APPROACH

Does this mean, then, that there is little hope of raising the income of people on farms and in small towns by industrial development? Not at all. A second and most encouraging fact we have learned in our work is that the benefits of a new industrial plant located in the small city are spread fairly widely throughout the surrounding communities and countryside. For example, when Yale and Towne came to Forrest City—which has a population of about 10,000—many people assumed that this new plant would only benefit residents of Forrest City itself. However, a commuting survey recently completed by our staff revealed that a sizable proportion of the plant's employees commute from rural residences in small communities up to 40 miles away. This is not at all an unusual phenomenon; surveys in 35 other small cities in Arkansas have shown the same broad commuting pattern.

Recently I learned with much satisfaction that the national rural development people in Arkansas and in several other States were experimenting with an areawide approach—covering several counties as a single unit. From an industrial development point of

view, this approach makes more sense than the county-by-county approach which had previously been in effect. In Arkansas, the multiple-county area chosen is in a hilly low-income region centered on the city of Batesville, which has a population of about 7,000.

In two recent instances apparel plants were located between small cities and the buildings were financed jointly by the small cities. One plant was built between Dermott and McGehee in southeastern Arkansas. The other was built in western Arkansas and financed by seven small cities, including Metropolitan Fort Smith. In each instance the plant was located beyond the limits of any city.

As a matter of fact, the areawide approach is effective even for larger cities. Three of our larger cities in southern Arkansas—Camden, El Dorado, and Magnolia—have formed a joint industrial development council. Recognizing that they are within 35 miles of each other and that many of their workers commute between the cities, they have found it advantageous to promote the attractions of their three-city region as a unit and as the beginnings of an oil, paper, ordnance, and metalworking complex. I understand that there long have been such subregional development efforts successfully operating in northern Mississippi and northern Alabama. I would strongly suggest that the national rural development program take into account such basic requirements for effective organization.

WHAT ARKANSAS CAN OFFER

I warned you earlier that I would end with a sales talk. Some of you may have been wondering why industry should consider it advantageous to locate in such a rural State as mine.

Well, it so happens that our labor surplus which is a problem for us can be a great asset to industry. When members of our staff knock on doors in the giant cities of the North they find industry quite conscious of periodic and acute labor shortages. Only one-fifth of the additional nonfarmworkers needed in our 10 most industrialized States can be supplied by natural increases of the labor force from within those States. Over half of the adidtional workers must come from reduced employment, increased participation in the labor force, and a shift out of farm employment. To rely on this source is to scrape the bottom of the barrel. Many industries throughout the North are counting on migrating youth from Arkansas and other Southern States to fill their peak labor needs.

But they need to ask themselves if this is the most efficient way to plan for future labor requirements. One fact they should keep in mind is that these transplanted workers have adjustment problems which lower their morale and productivity—a characteristic long noted in all immigrant labor.

What we in Arkansas can offer is another and better way of filling the growing labor needs of expanding industry—we offer industry an opportunity to tap this labor supply at its source. The first advantage that a new plant has in Arkansas is the opportunity to select the characteristics of its work force. Experience of our new industries has been that five capable workers apply for every job offered. Although most of our labor supply lacks industrial training, it has been found quick to learn and receptive to new and improved methods. We can offer industry a fresh start for building sound employee relations.

Yes, our experience teaches us that there is a large number of workers able and willing to commute from their farm homes to industrial jobs located in the towns and smaller cities of a State like Arkansas—who can continue to live and improve the homes they own and be happy in the small communities they know and love. It has been frequently and truly said that America's great strength in large part has stemmed from the pride of property ownership. The mechanical evolution in agriculture is sapping some of this strength, but wise planning in industrial location can certainly aid in the preservation of this truly great American value.

Recently there has been much newspaper comment concerning the financial straits in which many industrial States now find themselves. In the past 10 years the bonded indebtedness of these States has risen by 300 to 400 percent while, I am pleased to say, the State of Arkansas has reduced its indebtedness by 12 percent. To me, there is much to be learned from these startling happenings. The established industrial States are now being faced, as a result of overcrowding and overindustrialization in metropolitan areas, with the staggering cost of urban redevelopment which involves the problems of traffic, health, education, slum clearance, and housing.

Long-range planning 50 years ago might have eased the cost of the dubious luxury of the crowded city life. People frequently point a snide and disparaging finger at States like Arkansas and Mississippi which are low on the economic totem pole. True, the people of these States have had less than their share of life's material things, but now as they grow—and growing they are—they are in the fortunate position of being able to profit by the monstrous mistakes that have been made by some of the wealthier States.

Now, before the Governor of New York reproaches me for using this platform to make a raid upon his industries, I must hasten to assure you that in the 4 years of our commission's existence we have been successful in persuading only one sizable company to move its whole operation to Arkansas. In all other instances a branch plant located in Arkansas simply represents an expansion. And these branch plants in Arkansas strengthen their parent company's competitive position in the Southwest's growing markets as well as provide more productive work opportunities in one of the Nation's problem rural areas.

From Athlete to Regent Chairman

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. GEORGE. Mr. Speaker, a few years ago all Americans who were interested in college athletics knew Ray Evans and his excellent record. Ray was an all-American in football and basketball at the University of Kansas.

Upon leaving school, Ray entered the banking profession, and is now executive vice president of the Traders National Bank in Kansas City. As a member of the board of regents at the University of Kansas, he received his appointments to that post from both Democratic and Republican Governors, and this year he was elected chairman of the board.

Following the resignation of Chancellor Franklin D. Murphy, who has accepted a similar position with the University of California at Los Angeles, the board of regents, under the leadership of Chairman Ray Evans, performed a distinct service in selecting Dr. W. Clarke Wescoe, now dean of the university's school of medicine, who will assume the duties of chancellor July 1.

The chairman and the members of the board of regents are to be congratulated upon the immediate appointment of such an outstanding and well-qualified American as Dr. Wescoe, and the selection displays the straight thinking and rare judgment which Ray Evans has always exercised in the sports arena and in his business undertakings.

An editorial appeared in the Kansas City Kansan on February 3 which quotes the Pittsburg (Kans.) Headlight's comments on the election of Ray Evans as chairman of the Kansas University Board of Regents, and I ask unanimous consent that this editorial be included in the extension of my remarks:

RAY EVANS, CHAIRMAN

When members of the State board of regents elected Ray Evans as chairman for the coming year they were recognizing the continuing interest in schools of a man who once was one of the State's best known students.

"As an all-American in both football and basketball at K.U., Evans was known to sports fans throughout the United States," comments the Topeka Capital approvingly. "Since that time his enthusiasm for his school has been maintained and he has been a strong voice in alumni and athletic affairs at K.U.

"Since his appointment to the Regents his interest has broadened to include all of the State's schools. It is tribute to his nonpartisan conduct of his office that after having been appointed by Republican Governor Fred Hall he was reappointed by Democratic Governor George Docking."

On the same subject the Pittsburg Headlight comments that Evans is "the first chairman to be plucked out of the hall of football fame. He is the first top star of athletics to sit on the board of regents. But he has been on the board long enough to show his qualifications as a man of business. This is good. It is becoming more apparent all the time that one of Kansas' greatest responsibilities is to prepare the big State schools for the heavier obligations that lie ahead to the young men and women now approaching college days.

"These schools are now big business. Regents who not only are capable of participating in big business operations but are farseeing and broad enough in their thinking to recognize the heavy demands the upcoming generations are putting on Kansas are needed.

"And that is the reason that Kansas is interested in having men such as Ray Evans on the board of regents."

Financing Health Care

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. McNAMARA. Mr. President, during recent hearings by the Subcommittee on Problems of the Aged and Aging—on the subject of financing health care—we received many excellent statements.

Most of them added more documentation—to the inescapable conclusion—that there must be a system of national health insurance for our elderly citizens.

Among those who testified was one whose name has become almost a watchword in the field of health insurance.

I refer, of course, to the Honorable AIME J. FORAND, Representative from Rhode Island.

Representative FORAND is the author of H.R. 4700—which is more popularly known as the Forand bill—and about which I have received several thousand letters in the past few months.

I am sure that, despite the opposition of the administration and others, we will enact into law in this country a program of health insurance for the elderly—and that it will be based on the social security system.

But whatever form the final law takes we will all owe a debt of gratitude to Representative FORAND for the work he has done in this area.

I ask unanimous consent that the testimony given by Representative FORAND before the Subcommittee on Problems of the Aged and Aging be printed in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

Senator MCNAMARA. We hate to have Congressman FORAND with us and not give him a chance to say a few words for the record and maybe clear up some of the misunderstandings about his legislation.

Congressman FORAND, do you want to talk from here or would you prefer to sit at the witness table?

Mr. FORAND. I will go right down there and face you, Senator.

Senator MCNAMARA. All right, fine.

If there is an expert in this area, it is you. We know of your study and are certainly very happy to have your comments for the record. Go right ahead.

STATEMENT OF THE HONORABLE AIME J. FORAND, U.S. REPRESENTATIVE FROM THE STATE OF RHODE ISLAND

Mr. FORAND. Mr. Chairman and Senator, I am one of those who is not a newcomer to the problem of the aged and I think, for the record, I should say that I have been interested in this problem of the aged since I first went to my State legislature which was in 1923 at the time that the Fraternal Order of Eagles started their movement for old-age pensions, and I have been interested in it ever since. I am one of the few Members of this Congress that have had experience doing welfare work where again the problem of the aged was brought very, very vividly to my attention, during the almost 2 years that I spent as chief of the Division of Soldiers Relief in the State of Rhode Island and commandant of the Rhode Island Soldiers Home.

Now, I had not expected to take the stand this morning but I read this morning's papers and also I have heard the statements made here today and I think there are a few points that should be cleared up for the record.

First of all, I would like to impress upon all the news media, the newspapers, radio and television, that when they say the program I propose would be Government paid, they are all wrong. It would be paid by those who eventually would be the beneficiaries with the exception of that small group that would be picked up upon inauguration of the program, because what I propose is a self-sustaining program the same as the rest of our social security setup and, while the funds would be handled by the Federal Government just as other social security funds are handled, the money would come from the beneficiaries, the workers and employees and not out of the general fund of the Treasury.

When I introduced my bill in 1957, I made the statement which I have repeated several times since then, that I was not wedded to the language of my bill.

I was offering it as a basis from which to work because I was sick and tired of hearing a lot of words and finding that no action was taken to solve a most pressing problem.

I do not intend to go into the details of the plan. I think it has been explained time and time again and in order to conserve the time of the subcommittee, I shall gloss that over for the moment.

One thing that seems to have escaped the people in view of the fact that we talk about some 12 or 13 million beneficiaries who would immediately receive benefits under my plan is the fact that, while this would take up this group, it is providing an opportunity for the younger people who are working, to be able to take care of paid-up insurance so that when they reach retirement age, they will be the beneficiaries of the system. Not only would it be of great help to these individuals now, particularly those who have aged parents, but the younger fellow, 25 or 35 or 45, the young married man does not know when he is going to leave this world. He does not know how many children besides his widow he will leave behind him. These are people who would benefit as a result of this. He would be providing, through the payment of this insurance, for the care of these others who he would leave behind.

Much has been said about how much this would cost to the individual particularly. So much money would be taken out of his pay envelope.

Well, the truth of the matter is when you figure at the highest possible figure which is a wage base of $4,800 now, it would take only 25 cents a week, the price of a pack of cigarettes. How many people are drawing $4,800 a year in wages? A great many, but not all by a long shot. You know, and I know that there are many who are in the $2,000 and $3,000 bracket. Those individuals who have an income of $2,400 would only pay about 12 or 13 cents a week, and where could they buy this type of coverage at that price?

The commercial insurance people, of course, are opposed to my bill. But I think they are blind. I think they fail to see the point. And, as Senator HUMPHREY said a few moments ago, if this bill went into effect, it would permit these private insurance companies to cut their premiums and increase their coverage because they could eliminate the high risk, those people 65 or over.

They are missing the boat now just as they thought when they were fighting the original social security bill.

Now, the doctors are all opposed to it—I should not say "all"—let me correct that, because I have so many letters in my office from individual doctors to the contrary—many, many doctors have written to me that they are members of the AMA but the AMA is not speaking for them in this matter. But the AMA, which is supposed to represent the doctors, says that the hospitals will be overcrowded if this bill should become law.

Well, Mr. Chairman, I say to you that if the hospitals are to be overcrowded as a result of this, there are two reasons for it: One is the great need now existing for hospitalization and medical care of many of these aged people. The other is that the doctors would not be doing their job because under the provisions of the Forand bill, H.R. 4700, no one can get into the hospital unless a doctor says so. The doctor has to make all arrangements for him. He cannot stay in the hospital any longer than the doctor says he can stay there. So, that is all window-dressing.

Although the administration has not come up with any program as yet, they have done a lot of stalling over these many months. The truth of the matter is that they have been toying with several plans and according to the newspapers and according to Mr. Flemming, the Secretary of HEW, when he was before the Ways and Means Committee, their plan has to do with State and Federal cooperation in actually subsidizing the insurance companies.

That would mean about $400 million out of the Federal fund, out of the general fund each year, rather than from contributions made to the Social Security fund by those who would benefit.

Further, let us keep in mind, and I believe practically every Member of Congress has a good knowledge of the legislatures of the several States, how long would it take before these several States could work up a program to join this Federal program?

Why it would take years. In fact, Mr. Chairman, it may interest you and the other members of this committee to know that only last week in the Ways and Means Committee of the House when we were considering public assistance, the question of medical aid to those on public assistance came up.

We tried to check. You will recall, I think it was in 1958, that Congress voted to make an allowance of, I believe, it was $5 or $6 per claimant or per client under the public welfare for medical assistance.

To this day there are still 15 States that do not have a medical program under public assistance. Yet they are drawing the money from the Federal Government and we do not know how they are using it.

Now the administration has been talking about studies. They have made so many studies that they meet themselves going back. They have not come up with any program. They do not have one. And I repeat what I have said before: If my plan is not the best plan to take care of this situation, let someone come up with an alternative that is better and if they have it, I will accept it.

Now, the doctors talk about socialized medicine. This would not be any more socialized medicine than the payments already being made under social security. The truth of the matter is that this would operate on the same basis with the Government paying the bill as Blue Shield operates today. The Blue Shield is a doctors' organization. They are the ones who control. They are the ones who set the fees. They are the ones who agree to accept as total payment for a bill the amounts specified in their schedules providing the income of the individual is below a certain level.

This would operate in the same way. Sometimes I feel rather sick at heart to realize how some of these doctors feel and seem to be closing their eyes to the medical needs of the people and just thinking of their pocketbooks. I have one in my own entourage of relatives who had to scrape to go through medical school. Like all other doctors, he got the benefit of the public schools being paid for out of tax money. In addition to that, some employers, God bless them, were kind enough to provide him with employment at perhaps much more than he deserved as far as the wages were concerned, because they knew he wanted to study medicine.

And today, less than 10 years after he has graduated, he owns his own home. He owns a house where he has his office. He has three cars in his family and he is one of those who is out fighting against the Forand bill.

He has forgotten that his own father could not afford to put him through school. His

father was working in a cotton mill for low wages. His mother was working in a hospital as a scrub woman, but he has forgotten all that and I say to you, that he is one that represents the thinking of many of our doctors today, unfortunately.

The doctors in their paper, the AMA News, a few weeks ago had an editorial urging their State medical groups to publicize the fact that no one who needs medical attention need go without it because he is without funds. Well, it happened that either on the same day or within a week of the time that editorial appeared in that paper, I received a letter from an aged couple out in the Middle West. The man is 78. The woman is 72. The man can not work at his age, is rather feeble. His wife was taken to a hospital. The doctors said there was no hope for her. There was no need of keeping her there. He took her home and he is taking care of her. Their income is $98 a month under the social security system. Yet, with his letter, he enclosed two letters from collection agencies, dunning him for the payment of $15 due to a hospital and $40 owed to a hospital.

So, I say to you, Mr. Chairman, no matter what the doctors tell me, I prefer the evidence, the concrete evidence I have in my office. And, if you were to come into my office, I could show you a stack about a foot high of letters containing hospital bills and medical bills that have been paid by the individuals.

Only yesterday, I received a letter from a lady in my own district. She is 78 years of age and has been unable to work for a long time. She had a little home of her own, five room house. She has had to borrow money on that home in order to be able to pay her medical expenses. And she sent me a list of the medical expenses she had been paying—and the medicines she had been buying in the drugstores at these exorbitant prices they are charging for drugs today and told me her home had been taken away from her. All she has left in this world is $100. She had to give up her insurance policies. She is now going on public relief and says she is praying that something along the lines of my bill would pass so it might be of some help to her, but if not for her, because she does not expect to be in this world for long, then for others who find themselves in the same predicament.

Mr. Chairman, I have taken much more time than I should. I hope I have cleared up a few points of misunderstanding. Thank you very much.

Senator MCNAMARA. We are happy to have you here, Congressman.

I think you have perhaps presented us with one of the finest statements we have heard so far in favor of doing something about this very serious problem we are all facing. You did not take too much time. I am sure we can listen to you all day in what you say on this subject.

Mr. FORAND. You are very kind, Senator. That is something I feel down here, in my heart.

Senator MCNAMARA. I am sure of that.

Mr. FORAND. There is so much to be done in this field. We have got to get going. Stop talking and start acting.

Senator MCNAMARA. Senator, do you have any comment or question of the Congressman?

Senator BRUNSDALE. I think we owe a debt of gratitude to Congressman FORAND for coming over here and talking to us. Thank you.

Mr. FORAND. Thank you very much. If I may be excused, I will go back to my own business.

Senator MCNAMARA. Surely. Thank you again.

Reporting the Labor Story

EXTENSION OF REMARKS
OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. KARTH. Mr. Speaker, the Nation's daily newspapers are increasingly under attack for failure to control their conservative prejudices and for misusing their great power to the serious disadvantage of large groups in our country.

Prominent Americans pointed out to editors and journalists at recent meetings in Washington, D.C., that press irresponsibility threatens our very democracy.

Such observation comes as no news to millions of union workers and their families who often know too well the bitter hostility of their local newspaper. For generations organized labor has had to win economic and humanitarian gains for the whole population while fighting off the attacks of most of the Nation's newspapers. Yet, in spite of this, labor has worked with other broad groups including many enlightened managements in our country to build together the greatest democracy on earth.

Still fresh in the minds of 16 million American citizens and their families is the press conspiracy to vilify organized labor during the last couple of years. Indeed, the Landrum-Griffin law stands as the newspaper industry's greatest, and most dubious, contribution to the American labor movement.

In this all-too-short season when the Nation's newspaper editors and journalists may still be soul searching as the result of their Washington torments, I want to commend to their attention and Americans generally, an article from the New Republic. It is entitled "Reporting the Labor Story" and is written by William Abbott, assistant education director of the United Rubber Workers AFL–CIO.

Mr. Speaker, I would like to have reproduced here Mr. Abbott's excellent article:

REPORTING THE LABOR STORY

(By William Abbott)

A Roper poll of December 1959, listed 12 current public concerns and asked: "Which do you think are serious moral problems?" 89 percent of those interviewed named juvenile delinquency. School segregation had a 71 percent vote, disarmament 66 percent, rigged TV shows 41 percent, payola 34 percent. And 88 percent listed dishonest labor leaders. The only reference to business wrongdoing among the poll's 12 problems came under the heading of false advertising. There was no mention of profiteering in drugs, administered prices, using call girls to sell products or the running of businesses by racketeers.

Considering that Robert Kennedy, the counsel for the McClellan committee which investigated labor racketeering, has said that only "a small fraction of 1 percent of all the 430,000 trade union officials are corrupt or dishonest," the Roper poll's finding becomes highly interesting; even more interesting when one recalls that during the period in which the Teamster escapades were being exposed, Fortune magazine reported that embezzlers, many of whom were highly respected American businessmen, steal from $500 million to $3 billion a year.

And while the McClellan committee accused five unions of taking $5 million from union tills, Life magazine reported that $5 billion changed hands among business and professional men in bribes, kickbacks and payoffs. In terms of the sheer bulk of money mishandled the public presumably should have been more agitated about dishonest business officials than their labor counterparts. They weren't, and one must ask why. One answer lies in the power of the American newspapers as a special interest lobby, a lobby which campaigned for the Labor-Management Disclosure Act of 1959.

The accusation can be made—and only too well documented—that from 1957 through 1959 the press of the Nation, by and large, engaged in a massive effort to pass legislation which unions without dissent considered punitive. The newspaper lobby won its case by several proven propaganda techniques: (1) It headlined corruption in unions on its front pages while it played down stories of business corruption. (2) By constant linking of the words "union" and "rackets" it conveyed the strong impression that there was probably as much fire as there was smoke in the allegations of wholesale racketeering in unions. (3) It probably helped influence the conduct of the publicity seeking McClellan committee by minimizing or ignoring stories of anti-union thuggery and the violations of civil liberties of union sympathizers. In the process it built one James Hoffa into a monstrous devil or a martyr (and built up Hoffa in his union, too), depending upon where a man stood.

Headlines in the Akron Beacon-Journal, which the local labor movement considers more fair minded than most newspapers, illustrate a press pattern during the 1959 campaign for a new labor law: "Five Labor Unions 'Taken' for 5 Mfilion"; "Kohler Accuses UAW of Terror"; "Barden Bill Hits 'Union Tyranny'"; "Seek Link Between Hoffa, Underworld"; "O'Neil Says Labor Bosses Frantic"; "Crackdown on Union Reds Urged"; "Union Men Held in Extortion Plot."

During the Nathan Shefferman period when the McClellan committee was investigating antiunion rackets, the stories on the hearings were dropped into inside pages, and even then the Teamsters Union often drew top billing. All investigations of business skulduggery soon stopped. Where was the news value?

The playing down of management misdeeds is again shown in the Akron Beacon-Journal of June 25, 1959, which gave a Teamster corruption story in Pittsburgh two columns on the front page. The same edition carried the news of the indictment of the hometown Firestone Tire & Rubber Co. on charges of pricefixing. It made page 53.

The New York Times index for that year (1957) contained 10 columns of stories on labor racketeering, three columns on Union "Reds" and 16½ columns on all other labor stories including strikes. There were almost as many stories on racketeering and communism in unions as on all labor's other activities combined.

IF IT'S A UNION MAN, IT'S NOT NEWS

Typical of the way newspapers report—or rather do not report—news likely to create a sympathetic attitude toward unions is the story of Hosiery Workers organizer, Robert Beame. Almost lynched on

February 11, 1959, in Franklin, N.C., for trying to help organize a union, Beame, battered and beaten, escaped the mob in a wild auto chase. The national press had two chances at the story. The Chattanooga Times printed an interview with Beame from his hospital bed, and later Beame held a press conference for Washington, D.C., reporters. One reporter for a national press service swore that he sent the story out over the wire, but not a paper which was surveyed by this writer carried the story.

Stories of brutal attacks on union sympathizers became juicier in 1959—but not to most newspapers. High-ranking officials of the International Ladies' Garment Workers Union were beaten, blackjacked, and stabbed. A woman organizer was dragged out of her bed by a mob; a company gave its adherents baseball bats to use on its own workers who were trying to organize a plant; Sol Greene, assistant general manager of the Joint Press Council, was attacked on February 20, 1959, in Tenafly, N.J., by a gang of thugs who used lead pipes and bottles; there were many, not just several, stories of city and town officials actively engaged in breaking strikes and union organizing drives.

In 1956, an Alabama Governor's Commission investigated a woodworkers strike in which an unarmed unionist had been shot in the stomach. The Commission found that town marshals and other officials in two towns were on the company payroll, that the 79-cent-an-hour woodworkers had to buy from the company store and live in company houses. Then the Commission's report mysteriously disappeared. Outside of labor papers, this story of violence and intrigue made only the Alabama papers. It became an established rule to write up ordinary union members struggling against odds only when they were fighting the leaders of their own union.

Textile Workers Washington representative, John Edelman, began in 1957 to send out documented news releases giving a blow-by-blow account of what was happening to textile workers in the South. The Textile Union hoped publicity would force congressional committees to hold hearings on the union's charges. These stories were largely ignored.

PLAYING UP THE LABOR BOSS ANGLE

What made "news" was the Teamsters Union. A poll of Associated Press editors in 1957 listed the Teamsters as the fourth best news story of the year. It had more copy value to these editors than the Middle East crisis, Asian flu, hurricane Audrey or the fight over the civil rights bill. Reporters reported the capers of several Teamsters officials more religiously than sports writers reported the latest aches and pains of ball players. Their living habits, how they bet at the races, what they bought, what they ate and who cooked the meals were all described in detail.

When Illinois Senator PAUL DOUGLAS wrote the Chicago Sun-Times in August 1959, that the Landrum-Griffin bill would cripple union organizing drives and seriously threaten, if not break outright, small, weak unions, the Sun-Times replied DOUGLAS had missed the point: "The basic issues," the paper asserted. * * * [are], the provisions concerning blackmail picketing, secondary boycotts, hot cargo clauses and those instances where small businesses are frequently denied legal recourse by both the NLRB and the local courts in labor disputes."

Thus, the "basic issues" were "business issues." To PAUL DOUGLAS there was another, rarely reported, issue—protecting a man's right to form and keep a union of his own choosing. The Senator used the letter-to-the-editor column to express a viewpoint on the labor bill at variance with all the major papers in the city.

In fairness to the press, hostility toward unions has lessened considerably over the years, and a Virginia newspaper publisher probably expressed the current general attitude when he remarked: "Unions are fine as long as they don't make trouble." Some unions report a high rate of success in placing stories favorable to them in even the most unlikely of newspapers. In one Ohio collective bargaining situation an ultra-conservative Hoiles newspaper, which was heatedly pro-company, gave the union equal space to present its case. But when the chips are down, a newspaper which lives on its advertising can usually be expected to act in what it considers its class interest. What happened after the labor bill was approved by Congress is evidence of that.

Right after passage, James Carey, president of the International Electrical Workers Union, wrote a letter to Members of Congress in which he told Congressmen who voted for the bill: "We will do all in our power to prove to the workingmen and women in your district that you have cast your lot against them and that they should take appropriate action at the ballot box."

The Carey letter said nothing that was not already widely-known. He repeated the long-standing AFL–CIO policy of furnishing voting record information to union members. But what a sensation saying nothing new caused. "Carey's threat," made front-page headlines across the land for several days. Then, when the "news value" wore a bit thin, big pictures of Congressmen standing up to this labor boss adorned the papers.

But the press throughout the Nation failed to pick up a story in the Atlanta Journal-Constitution which reported the woes of Georgia Democrat, ERWIN MITCHELL, who was weighted down by pressures from the business lobby supporting the Landrum-Griffin bill. From the time the chamber of commerce first got in touch with him until after the bill was passed, Congressman MITCHELL was pounded by phone calls, letters, and telegrams from wealthy and influential business leaders. "Don't make it difficult for us to support you, ERWIN. Campaigns are expensive, you know.

While the Carey letter got headlines, there were few or no stories in most papers about business pressures on behalf of Landrum-Griffin.

Isn't it a "serious moral issue" if 94 cities have single ownership papers, and if this means that access to divergent points of view is denied, and if most American newspapers largely feature a one-class point of view? What becomes of "freedom of the press"?

In Maryland, one Congressman said fellow Democrats urged him not to run for office because he was identified too closely with labor and "McClellan committee headlines" alone would defeat him. And while he did win the election the incident illustrates the power of the headline on the thinking of political strategists.

Some brush the problem aside with the comment that nothing the papers say matters much, that the press breeds a healthy cynicism, and that people no longer believe what they read. "More Milwaukeeans swear at this paper than swear by it," said a Milwaukee politican who was explaining the success of candidates a Milwaukee newspaper opposed. But if it's true, isn't that a "serious moral issue?"

Go to Teamster halls around the Nation and you will find that the very people most denounced in the press are among the ones most honored—and sincerely so. Why? Because the press has built Hoffa and friends into heroes for many a unionist. If the press one-sidedly reports the news, if on its front and editorial pages it opposes a large number of labor programs with which workers identify, why should Teamsters believe what the press has to say about their leaders?

The only answer to this situation I know is to create other kinds of newspapers which express other points of views equally strongly. James Wechsler, editor of the New York Post, has suggested that labor itself must provide the answer by inaugurating daily papers in industrial centers. At present, however, labor has neither the money nor perhaps the will for such an undertaking. Yet, if labor does not do it, what other power group can?

Civil Rights

SPEECH
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. SPRINGER. Mr. Speaker, to many of us the present bill does not encompass the protection of civil rights that we had visualized when debate opened on this bill.

Giving credit to the bill in the most favorable light, this is only moderate legislation. We still have a long way to go in guaranteeing civil rights to all Americans, regardless of race, color, or creed. I have given earnest consideration to the bill. This seems to be the best bill which can be obtained at this time and under these circumstances. This is an advance over the Civil Rights Act of 1957. This is the second step in the onward march of civil rights for all of our people. It has taken us almost a century to come this far. However, we have in the past 8 years made much greater progress than in the previous 75 years.

If we can take the experience of the Attorney General with reference to the 1957 civil rights bill, it does seem that we will have better means of enforcement of constitutionally guaranteed rights. In many ways this legislation will be a challenge to the Attorney General to enforce these rights in accordance with the legislation.

I have voted for this bill as a means of helping to achieve a better climate in which civil rights may be enforced and guaranteed. It is true that the Senate made substantial changes when it came to that body. In title I, the Senate deleted the word "corruptly" and struck out the portion under which the criminal penalty imposed would not run concurrently. From the same title was stricken language which would have made it a crime to interfere or obstruct a court order by a threatening letter or communication.

The other body also struck out a section which would have made it a crime to travel in interstate commerce to avoid prosecution for having given wrong information regarding a bombing. However, the Senate did include a provision making it a Federal crime to transport in interstate commerce any explosive for bombing purposes. The Senate version also reduced the preservation of voting records from 2 years to 22 months.

In other sections, the Senate eliminated the House section whereby the Commissioner of Education could nego-

tiate for leasing of school buildings which were constructed with Federal aid—whenever local authorities could not provide educational facilities for children of members of the Armed Forces.

In title VI, the Senate put in a section requiring that hearings before any voting referee shall be held under the direction of the U.S. district court.

It appears to me that this bill is neither one to the right or the left, but is essentially a middle-of-the-road bill. However, if properly enforced, I believe that it could result in substantial gains in the next few years for those who have been denied their civil voting rights for almost a century.

I think probably the greatest one gain to come from this bill is the moral support which will be given to those who seek to have their voting rights established, as well as to we who have been interested in helping them obtain those rights. I personally shall continue to work to obtain decent treatment for these people who have suffered so long. If these rights must come inch by inch, at least we will realize that as Americans they are worth working for.

Forand Bill

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. DULSKI. Mr. Speaker, the Forand bill—H.R. 4700—is a legislative attempt to accomplish a necessary and practical result. It is not, as some are led to believe, a contest between the sick, aged, low income, retired people and the doctors of this Nation.

This bill does not solve completely the medical problems of the aged, and it was not designed to attain such a goal. It merely guards against total disaster financially as a result of medical misfortunes beyond the control of individuals. The people want and need security from the unexpected medical disasters which are inevitably encountered in the later years of their lives and the financing methods outlined in the bill are a small price to pay for such security.

All of the alternative proposals advanced as afterthoughts by groups opposed to this legislation are too little and too late. This opposition wanders and roams in the vague realms of the theory, creating mountains out of molehills on the argument of socialism and dissipating their energies attacking windmills of supposed dangers, Many of these arguments operate on the basic premise that people have no business becoming 65 years of age and getting sick.

On the shopworn argument of socialism, I defy anybody to show me a single line, page, paragraph, or section of the Forand bill that would socialize or control medicine. Nothing in the act can be construed to give the Secretary of Health supervision or control over the practice of medicine or the manner in which medical services are provided. There are specific provisions in the act to provide a "free choice by the patient" of surgeons, hospitals, and nursing homes. Any fair and objective definition of socialized medicine would call for Government-owned facilities and Government-employed personnel. Such is not the case with the Forand bill.

Much of the information distributed by the opposition to the Forand bill is distorted, incomplete, fragmentary, and untrue. If the purveyors of this material would forget individual rights and concern themselves with obligations to society in general, we could get on with this business of prepaid public health insurance with greater speed and dispatch and with less heat and more light on the subject.

The medical profession has every right in the world to concern itself with entrance qualifications of its members, the standards and ethics of its profession, and its licensing laws. In these concerns, it acts in the public interest. When some of them venture into the field of the mechanics of paying for these services through public or private bookkeeping plans, they are operating out of their field which runs contrary to public opinion and in this respect does not carry the qualification of experts.

Most organized groups support medicine in its fight to maintain its strict professional status, and they are dismayed at the opposition to the Forand bill. This opposition is based on the theory of constant repetition of a phrase or slogan often enough until some people start believing it. The Social Security Act itself once withstood a barrage of the same sort of propaganda attack; yet, who today would have the audacity to propose its abolition?

This opposition to the Forand bill contains an element of compulsion which in my opinion is unhealthy when exercised upon a profession so highly respected. This compulsion should rest upon some intelligent consent on the part of the members of the profession in our country, and such is not the case. The medical profession has been led unwittingly to this position by autocratic leadership who have set themselves up in the image of primitive gods, hurling thunderbolts at the general public, as they attempt to delay the inevitable demands of the great mass of people, as outlined in this bill.

A look at the history of our country will show that every reactionary force must eventually give way, and I state that the opposition to the Forand bill is of a reactionary nature, with very little argument of a positive nature being offered to present an opportunity for rebuttal.

There are too many pitfalls in our present methods of providing for medical problems in the later years of life. There are too many restrictions, cancellations, and inadequacies. Those who need health insurance the most have it the least, and the Forand bill will provide retirement without fear of financial disaster because of illness.

To Preserve Our Constitution and Constitutional Republic

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. CASEY. Mr. Speaker, I rise at this time to pay tribute to the Houston Chapter, Council of Women Realtors of the National Association of Real Estate Boards, which each year conducts an essay contest among high school seniors on the preservation of our Constitution and our Republic.

This is indeed a noble effort, and I think the members of the council, the judges, and the scores of students who participate are to be congratulated. It is gratifying to me to see that the youth of today—who will be our leaders of tomorrow—are keenly aware of the challenges being made against our Constitution. And it is heartwarming to find that there are patriotic Americans such as the members of the council and the judges who will give freely of their time and money to sponsor such a worthwhile project.

Four youngsters won the prizes offered by the council in the contest. They were Don Irvin, 3430 S. MacGregor, who won first prize; and Fontaine Gotch, 3602 Garrott; W. Sears McGee, Jr., 1516 Missouri; and Marjorie Hinds, 2207 Bolsover.

I think the Members of Congress and Americans in general could well ponder the thoughts expressed by young Don Irvin in his prize-winning essay, as printed on the editorial page of the Houston Chronicle:

TO PRESERVE OUR CONSTITUTION AND CONSTITUTIONAL REPUBLIC

(By Don Irvin)

In the Constitution the Federal principle was adopted. That is, the powers of government were divided between the Central and State Governments by an authority superior to the Central or State Governments—the sovereign people.

This division of power cannot be changed by either Central or State governments acting alone, but only by that sovereign people acting through both Central and State Governments.

In this division of powers those delegated to the Central Government were specifically enumerated and dealt with the general good, notably the defense and security of the Nation, control of commerce, currencies, and credit. It was implied, and later (1791) expressly stated in amendment X, that all "powers not delegated to the United States by the Constitution • • • are reserved to the States, respectively, or to the people."

MANY SAFEGUARDS

To guard against tyranny, the powers delegated to the Central Government were organized into three separate and equal departments. • • •

The Constitution was laced and interlaced with checks and balances within and between each department to assure that public officials would be the servants, not the masters of the people.

Despite these aforementioned safeguards and others, those Americans of 1788 still had misgivings about this supergovernment created by the new Constitution.

Particularly did the implied power and supreme law of the land clauses strike terror to their hearts and brought the demand for protection against the Federal Government's possible invasion of the personal rights and freedoms of a sovereign people and the reserved rights of the sovereign States or people.

If we mean to preserve our Constitution and our constitutional Republic we must see that these checks and balances are rigidly observed.

There must be strict adherence to the 10th amendment. For example, no branch of the Federal Government shall usurp a State's right to control it schools.

The three departments of government must be kept separate. * * *

The Supreme Court in its 1954 desegregation decision virtually enacted laws and certainly violated the 10th amendment. If we are to preserve our Constitution some new safeguards must be set up limiting the power of the Supreme Court to defy the will of a sovereign people.

Despite all the checks on the President's powers, Presidents stretch their constitutional powers far beyond the point of discretion or safety. The President is the most important lawmaker in Washington. Presidenial agreements, such as the Yalta agreements, that sidestep Senate approval, are often very dangerous commitments and do not represent the will of the sovereign people. If we are to preserve our constitutional Republic, certainly new safeguards must be taken regarding both the treatymaking and military powers of the President.

Our constitutional Republic cannot survive if the Government continues to enter the economic field. * * *Bureaucracy, alphabet agencies, creeping socialism will destroy the very liberty and freedom of our people.

The welfare state with its cradle-to-the-grave coverage will stultify industry, initiative, and self-reliance, without which qualities no republican government can survive.

POWER TO DESTROY

If the power to tax is the power to destroy, then certainly we are well along the road to destruction with a national debt now approaching $300 billion, continuing unbalanced budgets, and crushing burdens of taxation. If we mean to save our Republic, we must hold a tight rein on the purse strings of our Congress. We must ferret out graft and corruption in the Government, abolish waste and extravagance, and curtail those billion-dollar giveaway programs in every corner of the globe.

Wonder what the Founding Fathers would say about the crushing burden of presentday income taxes and hidden taxes numbering 150 in a loaf of bread and 1,000 in a quart of milk?

And lastly, we must protect the sovereignty of our Nation in all these entangled dealings in U.N., UNESCO, NATO, SEATO, the World Court, etc.

Unless we look to these things, and soon, the blessing of liberty may not always be secured to ourselves and our posterity.

Give District of Columbia Voting Rights

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. MULTER. Mr. Speaker, in connection with my bill, H.R. 4630, and the discharge petition with reference thereto, I commend to the attention of our colleagues the following letter to the editor of the New York Herald Tribune as it appeared in that newspaper on April 25, 1960:

GIVE DISTRICT OF COLUMBIA VOTING RIGHTS

To the New York Herald Tribune:

The recent naming of Brasilia, Brazil, as the world's newest capital, prompts the revival of this writer's pet peeve.

A phone call to the Brazilian Consulate has revealed that Brasilia is within a Federal district, as is Washington, D.C. However, the residents of Brasilia, like the residents of Canberra, Australia, also located in a Federal district, can vote in national elections.

To my mind, the ballot is a mockery, as long as the citizens of our Nation's Capital are denied it. With presidential elections in the offing, this travesty looms ever larger.

Vote? Of course. In Brasilia, Canberra, Ottawa, London, Paris, Rome, even Moscow. But not in Washington.

Let's give the citizens of our Nation's Capital civil rights.

AVERY GILES.

LITTLE SILVER, N.J.

We Give Away Food and Have Some Left

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. AVERY. Mr. Speaker, the following is a very excellent editorial which appeared in the April 26, 1960, issue of the Kansas City Star. I think every so-called "do gooder" should take a moment to read this provocative editorial. It is quite easy to say "Let us give food to underdeveloped countries"; but there are many other factors to be considered. This editorial very clearly presents the prime factors which must be considered when a good giveaway program is underway. I urge each and every Member of Congress to take a moment and read this editorial:

WE GIVE FOOD AWAY AND HAVE SOME LEFT

Why don't we give it away? To many people this always seems the logical solution of the farm surplus problem. Time and again you hear the statement that half the people of the world go to bed hungry every night, and many people in the United States don't have enough to eat.

The truth is our Government does give food away, in amounts that are staggering. But the United States continues to produce more surpluses. Also we have discovered that giving food to underdeveloped countries has its difficulties.

The U.S. Department of Agriculture recently made a computation of its free food distribution efforts over the last 7½ years. In that time a total of 13,793,700,000 pounds of surplus foods has been moved into use in this country and overseas. Of this amount 5,361,800,000 pounds costing $1,326,400,000 was distributed in the United States while 8,431,900,000 pounds costing $1,375,500,000 was given to people overseas.

These figures do not include sales of farm products under the Public Law 480 program in which this country takes the currency of other countries as payment. Nor do they include exports subsidized in other ways.

Certainly the world (except perhaps those countries which compete with us on exports) benefits from the farm surpluses here.

While our Government continues to offer surplus foods to certain areas overseas it has discovered that it is often easier to sell products than give them away. The underdeveloped countries are populated almost entirely by people who make their living from the soil. They are concerned with protecting their own markets. These countries have no storage facilities and poor transportation systems. Also, while the people may be undernourished their problems are not confined to hunger alone.

Through our sales under the Public Law 480 program we are attempting to help these countries develop their own resources, an effort which apparently will have more lasting effect than a program of gifts.

In the United States, the surplus foods are offered to the States to be distributed through regular welfare agencies. The present administration insists that these agencies offer the most economical and effective way both to handle the foods and get them to the people in need. The plan gives local control to authorities who best know the situation.

Others argue for a plan under which needy people would be given stamps to trade at stores for food. This would hand the entire control of food distribution and its cost to the Federal Government.

Perhaps the method of distributing food is a proper subject for debate, but we shouldn't lose sight of the fact that the nation is making use of its surpluses and has been for a long time. Also, our farm surpluses are not to be compared exactly to leftovers from a bountiful dinner. The Government buys these surpluses from farmers and when they are eliminated it buys more. We also could have surpluses of motor cars or men's hats to give away if we subsidized production beyond demand.

In fact, the situation is too complicated to be settled solely by the process of giving food to hungry people.

De Gaulle and the Summit Conference—I

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. COHELAN. Mr. Speaker, the signs of new flexibility as the May summit conference approaches are further analyzed by Columnist Walter Lippmann in two articles which I submit for the RECORD today as separate insertions. The first, which follows, points out that General de Gaulle "is now the leader and the chief spokesman of the Western alliance" and goes on to develop Mr. Lippmann's conviction that "the national interest of France demands that there shall be no revival of pan-Germanism and that even a political union of the two contemporary Germanys should be put off for a long time." The article is from the April 26 edition of the Washington Post:

TODAY AND TOMORROW—NEW LEADERSHIP

(By Walter Lippmann)

After his visit to Washington, it can be said that on the German question General de Gaulle is now the leader and the chief spokesman of the Western alliance. It was high time for a change. For until recently we have had no German policy. We have had only a tangle of slogans and fictions about

reunification which could lead to no solution and settlement of the German problem, and were not seriously meant to do so.

General de Gaulle has assumed the leadership of the alliance by sweeping aside the hackneyed slogans and the equivocal fictions. He has given the alliance a new lead in how to think and how to talk about the cold war and about Germany.

Let us hope that the speechwriters in the Pentagon and the State Department will give close attention to the change in style which was demonstrated in the press conference on Saturday and the address to Congress on Monday.

Perhaps the greatest difference between General de Gaulle's way of thinking and the conventional thinking of the day is that he sees and treats the Soviet Union as primarily a European great power, and only incidentally as the headquarters of world communism. For him Russia existed long before Lenin and will exist long after Khrushchev. Russia is a European nation with national interests in Europe, and the central clue to policy in dealing with Russia is to be found not in the writings of Marx and Lenin but in the history of Russia.

This does not mean that communism, which is a secular religion, does not play a great role in the Soviet Union and in its relations with the rest of the world. What it does mean is that in negotiating with the Soviet Union, the statesman should fix his eyes on the Russian national interest, not let himself be razzle-dazzled by the ideology.

Having fixed his eye on the Russian national interest, on what any Russian Government would protect or aim at, the statesman can know where lies the true area of negotiation. When he stands firm, as the saying goes, he knows concretely where to stand firm, where is the point at which Russia's national interests and ours should be accommodated.

General de Gaulle is one whom not the most foolish among us would call soft on communism. And yet, when he speaks of the Soviet Union, he does it with cool and impeccable courtesy. He does not stoop to the vulgar epithets which the ghostwriters feel they must sprinkle through almost every official utterance. This courtesy comes from the fact that General de Gaulle sees France and he sees Russia as perennial nations within a European society.

This style and tone does not mean, as some may think, that General de Gaulle is a lordly figure left over from another age. There is much reason to think that in talking with Mr. K. as the head of one European power to the head of another European power, he holds the key which can unlock the door to a detente, that is to a relaxation of tension.

The key to the door is that the national interest of France demands that there shall be no revival of pan-Germanism, and that even a political union of the two contemporary Germanys should be put off for a long time. This is also Russia's national interest. Communist ideology no doubt demands the unification of all the Germans under a Communist state. But the national interest of Russia is different from that. The Russian national interest is to prevent the rise of so formidable a competitive Communist power in Europe as all the Germanys would make. Russia has quite enough competition of that sort in China and the rest of Asia.

This is the reason why the Khrushchev-De Gaulle talks have been followed by such an improvement in the climate. Undoubtedly General de Gaulle made it clear to Khrushchev what is the French interest in relation to the German question and that at bottom it is not radically different from the Russian national interest. Since then, Mr. K. has known that if he wants to protect the national interests of Russia in Germany and in Eastern Europe, an understanding is possible. But if he wants to expand communism instead of protecting Russia, he will run into a stone wall.

The reader must remember that statesmen cannot say these things in so many words. What is happening cannot be openly avowed officially or legalized in formal documents. Many faces will have to be saved. There are critical elections here this year and in Germany next year. For some time to come we shall continue to hear the old slogans and fictions about reunifying Germany within the NATO alliance but nevertheless, no matter what we hear, if this was ever a German policy, it has been dead for years. It has been dead not only because the Russians would have none of it but because so many in the West never wanted it at all.

Broadcast Journalism and the Mayflower Decision

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was presented by WTOP television and radio on April 15, 1960. In preface I would just like to say that I consider it to be in the highest tradition of broadcast journalism and editorial opinion as opened up some years ago by the famous Mayflower decision.

The editorial follows:

THIS EDITORIAL WAS BROADCAST ON APRIL 15, 1960, OVER WTOP TELEVISION AND WTOP RADIO

We view with a good deal of sympathy the effort by Congressman CHARLES PORTER of Oregon to compel the State Department to issue him a passport to travel in Red China.

The case can be considered from two viewpoints. One is Mr. PORTER'S contention that, as a member of the legislative branch, he has an inherent right to travel where he pleases. Mr. PORTER asserts that the State Department's refusal to grant him permission to visit the Chinese mainland violates the principle of the separation of powers. Although the courts so far have rejected his argument, the Supreme Court should—and probably will—have the final word.

However, a more important question in the Porter case involves a matter of national policy. Mr. PORTER believes there should be an effort to "establish communications" between the United States and Communist China, in contrast to the present State Department quarantine. He says he would like to travel to Red China as a member of a commission to "talk turkey" with the Reds on trade relations.

Much the same line was taken recently by a Rockefeller Fund report on foreign policy and by Representative CHESTER BOWLES, writing in the current issue of "Foreign Affairs." There seems to be a growing dissatisfaction, which this station shares, with the refusal to permit any meaningful contact at all with the Chinese Communist regime.

We do not argue that Red China's sins should be forgotten or its continuing menace ignored. However, establishing communication with Peiping would not imply American approval of what the Communists are doing or have done.

It would seem wise therefore for the State Department to pay new attention to our increasing requirement for some contact with Red China and allow Congressman PORTER to pay his visit. If the Reds agree to the trip, nothing would be lost and something might be gained. If they refuse, world opinion would take note of that fact.

How a Proud People Keeps Tradition of Freedom Alive in Poland

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. PUCINSKI. Mr. Speaker, I am taking the privilege today to introduce into the CONGRESSIONAL RECORD an excellent series of articles about Poland which has appeared in the Chicago Sun-Times.

Next week will mark the 169th anniversary of the day Poland adopted her celebrated Constitution of May 3. This document introduced to the continent of Europe, for the first time in history, the democratic principles incorporated in our own American Constitution.

Since, throughout the world, Poles and friends of Poland will be paying tribute to this historic document, I believe this series by Mr. James Morris is particularly timely for it demonstrates so eloquently that today, even though the people of Poland are forced to live under a Communist government imposed on them against their will, the spirit which led the Polish people to adopt the Constitution of May 3 in 1791 still prevails.

We, as Americans dedicated to the principles of freedom, can learn a great deal from the people of Poland who, living under the most adverse conditions, continue their inherent belief in equality and justice.

I believe the Chicago Sun-Times has performed a notable service in bringing this penetrating series to the attention of its readers.

The series follows:

[From the Chicago Sun-Times, Apr. 24, 1960]

POLAND TODAY—HOW A PROUD PEOPLE KEEPS TRADITION OF FREEDOM ALIVE

(By James Morris)

WARSAW.—On the stroke of every hour throughout the day a small shutter opens in the belfry of St. Mary the Virgin in Krakow, the oldest and most beautiful of Polish cities, and a trumpeter, the bell of his instrument shining dimly in the shadows, blows an ancient call to arms.

Bold, clear, and beautiful it sounds across the market square, where the women squat beside their flower stalls and the taxis squelch among the slush, and it rings away among the tumbled houses of the place to the broad frozen Vistula and the high ramparts of the castle, where the old kings of Poland lived in a splendor of gold bowls and tapestry; but suddenly in midphrase the trumpeter stops, and his music ends abruptly with a kind of dying jerk. Four times he tries, turning north, south, east, and west,

but four times his fanfare is interrupted, and he never completes it.

The trumpeter blows this way because many tangled centuries ago, in the dim recesses of Polish history, a predecessor rousing Krakow against a Tatar invasion was shot in the back by a barbaric arrow halfway through his summons; and the fact that to this day he never finishes his call, and that his heart-rending failure is broadcast every day at noon by the Polish state radio, is a gage of the depth and resilience of Polish tradition.

In considering the People's Republic of Poland, as a political phenomenon, as a Communist experiment, as a dependency of the Soviet Union, it is wise to bear in mind the trumpeter of Krakow, and all he so picturesquely represents. Poland is still blazingly Polish, and she breathes a tart spirit peculiar to herself.

CULTURE LEANS WESTWARD

Poland lies in the heart of Europe, her western frontiers well to the east of Rome, her eastern on about the same longitude as Mersa Matruh (an Egyptian village which was the site of several battles in World War II), yet she feels unmistakably a country of the West, a Christian country, a country of individualists, with humor and skepticism and argument like a tang upon the air.

Poland has been under unwanted Communist rule for 15 years, and since 1939 her story has been one of unrelenting foreign domination, actual, or implied; but pay a visit to a students' theater in Warsaw, with its tinkling piano, and its pretty feathery girls, its faint but pleasant baritones, its lighthearted attempts at a soft-shoe shuffle, and were it not for an excess of aspirates and a shortage of vowels in the lyrics you might be back at the footlights or at one of Mr. Slade's forgotten juvenalia.

The Poles are by nature a people of ease, fun, and elegance, a people always con brio. Their manners are impeccable, their tastes ornate, and even the insistent objections of the hygiene specialists have not broken the feudal elaboration with which they kiss a lady's hand. The Poles pursue their professions, their hobbies, and their prejudices with equal gusto, not always indeed with great logic, or overwhelming efficiency, but with a panache, nicely tinged with irony, that often reminds me of the Irish.

NO COMMUNIST ROBOTS, THEY

This punch and pungency of character has sometimes brought the Poles great suffering, but has at least enabled them to survive both as a nation and as a culture; and in our own times it has prevented their land sinking once and for all into the alien uniformity of the Communist bloc.

In 1956 the ebullience of the Poles led to a relaxation of Communist grip so generous that for a moment Poland seemed the progenitor of a new political compromise—a Communist state, but one so liberal that it might form a bridge of reconciliation between East and West.

Today Poland is not quite so exhilarating as she was three years ago; but, thanks entirely to her own prickly pride, she remains much the most relaxed and open-minded of the Communist powers.

We may safely assume that three-quarters of the Polish people loathe the form of government that rules them; but nevertheless this is not now one of your grisly whole-hog police states.

There is a censorship of newspapers, passports are not always easy to come by, Western diplomats and local diehards will make your flesh creep with tales of hidden microphones, informers, and tape recorders. Incoming mail is certainly opened as I can testify from the grimy censorious thumbmarks that nearly obliterated one of my mother's less legible references to the arrival of the new vicar. But though the apparatus of complete despotism undoubtedly exists, since 1956 it has not been exercised.

THE POLES SPEAK FREELY NOW

There are, I am assured, no political prisoners in Poland today. People talk to you with abandoned liberty and outspokenness. Nobody, in my experiences anyway, is scared to be seen with a foreigner (though the more wary probably fight shy of diplomatic invitations). The bookstalls are heavy with the world's pinker press, but anybody who likes can read the organs of Western reaction, from the Guardian to Woman's Own, in the bars of the big hotels.

Poland does not feel a happy country, but she does not feel a frightened one. "I am not bringing my son up as an opopsitionist," a parent wrote in a Warsaw newspaper the other day, "—one in the family is enough."

Intellectually, Poland is in a turmoil of activity, her coffee shops buzzing with the exchange of ideas and the clash of opinion. Western culture of all kinds ferments and flourishes. Plays, English, American, French, German, are translated by the dozen and performed in a myriad of theaters. Western books are at work, many 12-tone composers, poster painters of involved technique, angry young men and existentialists and devotees of the "method." Architects are just beginning to squirm themselves out of the awful stultification of Stalinist taste, and philosophers dabble freely in anything from Bishop Berkeley to Albert Camus.

AN INTENSELY RELIGIOUS COUNTRY

Above all, Poland remains an intensely religious country. The intelligentsia, like its brethren everywhere, is mostly agnostic; but the people at large are said to be more stanchly Catholic than any other race within the wide fold of Christendom.

The church, which is engaged in a perpetual running battle with the regime, is the only organized opposition in Poland; but so powerful is it, so patently does it represent the feelings of its faithful millions, so stubborn is its hierarchy, that it remains inviolate—the most powerful body of dissent within the Communist bloc. In Poland the atheist state even pays the wages of religious instructors.

How you respond to the fervors of the Polish church depends upon your own predilections; but for myself there is nothing more moving in Europe than the spectacle of a Polish church at evening mass, when the crowds of the poor and ever-faithful stream from the snowy streets into the dim cold church, to a glitter of vestments and candles and ornaments.

A VERY MOVING SPECTACLE

The very congregation around you, squeezing through the brown velvet curtains of the door, stands there in a condition halfway between slump and ecstacy; and the intensity of belief is so profound that it feels almost tangible, hanging and drifting about your head like a cloud of incense.

I am moved not simply by this unyielding faith but because you can see in the eyes of these people something of the tragic quandary of Poland, something of the terrible pathos that lies behind its gaity, as a hint of tragedy so often underlies the tumbling of a clown. All that the Poles have snatched out of communism, they have won by their own strength of character; but for such a people it is not much.

[From the Chicago Sun-Times, Apr. 25, 1960]

HOW GEOGRAPHY "TRAPS" POLAND

(By James Morris)

WARSAW.—Poland is trapped; trapped by geography, by history, by the worst of luck. There are few people who share our Western values more intensely than the Poles, and few who deserve sovereignty more; but they are saddled with a Government and a political system they do not want, and there seems not a shadow of a hope, not an echo of a proud fanfare, that they can rid themselves of it.

Since 1956, indeed, the regime has not been ferociously or cruelly intolerant, and its philosophies are not without merit.

Much has indisputably been achieved in Poland under Communist rule: The reconstruction of Warsaw from a wilderness of bloodstained rubble, great new housing schemes, new industrial projects.

Nobody, so far as I know, is starving in Poland. People are reasonably well dressed, shops are moderately well stocked.

The present Communist leaders of Warsaw, notably Wladyslaw Gomulka himself, are not power-drunk egotists: on the contrary, they seem to live lives of ascetic restraint. There are few flashy cars for the wise boys of the party, such as you see brazenly skidding around the streets of Prague.

When Gomulka was sent a new kind of television set, as a gift from the state factory, he asked if he might pay for it on the installment system: he is a plain, humorless, dedicated workingman, and he lives in genuine simplicity in a two-room apartment.

A POOR, BACKWARD LAND

Nor can one be blind, in theory anyway, to the practical advantages of the system. Poland is a poor and in some respects backward country, and though her prewar Government worked energetically enough to raise her from the slough, still there remains a heavy legacy of old unhappy times.

The country is congenitally "agin" the Government. It is riddled with fiddles, corruptions, evasions, black markets. The Poles have inherited from all their past tyrannies and occupations a natural tendency toward the devious way, the slipped note from hand to hand, the little backstairs peculations.

They are flaming patriots, but they have been dominated by alien or unpopular authorities for so long that they often find it difficult to equate love of country with social conscience; and on paper anyway communism can provide the element of discipline and communial effort that everybody (not least themselves) agrees they need.

Nevertheless, Communist government in Poland is a tragedy, if only because it really represents the domination of a foreign power. Few would deny, not even the stanchest party workhorses, that were it not for the ever-present threat of Russian power, communism would be swept out of Poland in a few crowded glorious hours.

Only the wildest conservatives wish to return to the prewar past, to restore the great industries to private hands, and summon back the exiled aristocrats: but nearly all Poles would probably vote, if they had the chance, for some kind of democratic socialism that was truly independent.

PREFER FREEDOM OVER ECONOMICS

They care less about economics, if I judge them right, than about freedom, national and personal. They want to be themselves, Poles, citizens, unhampered by dogmas, strategies, or Socialist realism. They are sick to death of norms, congresses, delegations, medallions of Lenin, party bonhomie, state enterprises, and all the tedious paraphernalia of the creed.

More than anything, they are sick of Russians. The Russian troops stationed in Poland are kept strictly within their allotted limits, for fear of incidents; and if ever the people of Warsaw could knock down the Palace of Culture, Stalin's enormity of a gift to the nation, it would be a Mafeking, a Mardi Gras, a blockbuster of fireworks night.

But there is nothing they can do. This is their age without a name and Gomulka represents the most they can hope of contemporary history.

In 1956 their spirit, fortunately met by Soviet Prime Minister Nikita S. Khrushchev's brand of gambler's liberalism, enabled them to achieve the degree of independence they enjoy now, under which Warsaw, compared with Bucharest, Budapest, Prague, or Moscow itself, is a positive Paris among cities.

They were willing at that time, as they were in 1944, to die at their barricades, flaunting the pennants of national liberty. But time has passed, the world has shifted, and today the events of 1956 have to them, even in Polish eyes, a miraculous air as if some divine thunderbolt had intervened on their behalf.

Unless there is some universal relaxation of tensions and rivalries, it is difficult to see it happening again, or to imagine the Poles extracting from the tight fist of communism any greater quota of freedom.

THERE IS NO ESCAPE

Consider their situation. To the south lies Czechoslovakia, the most dutiful of the Communist dependencies. To the west is the German People's Republic, not only feared and hated in its own right but also the base for Russia's advance armies. To the east is the Soviet Union herself, and smack through Poland run the lines of communication that link Moscow with Berlin. Poland simply cannot escape.

I am told that if the present ration of political tolerance were withdrawn from Warsaw a revolution would occur and optimists say that Khrushchev, his fingers (if not his conscience) still smarting from Hungary, would hesitate to stifle it by force: but for myself, I have my doubts.

So, I suspect, do most Poles, and in a way this makes the vivacity of their intellectual life all the more poignant, since in political terms it is achieving nothing. I do not know if they have really been forced to accept political impotence—they certainly do not give that impression in the sparkle, skepticism, and irreverence of their conversation: but I think they realize that in the unhappy poker school of our times they have no more cards to play.

They turn from politics, most of them, to other and more hopeful pursuits. Their dinner tables ring with infectious bravado, but after a few days in Poland, when you have looked them squarely in the eyes and probed in vain for unequivocal answers and tried to penetrate their mask of wit and geniality, you will begin to perceive the core of cynicism that lies behind the fun, and to grasp the tearing pathos of their realism.

ARTISTIC, YES; REALISTS, HARDLY

For realism is what they like to call it. By instinct they are anything but realists. They are an imaginative, high-flown, artistic people, and nothing illustrates their character better than the mad but marvelous rising against the Nazis in 1944, when Warsaw, so many miles from friends, rose to arms in desperate inspiration, as on the wings of a Chopin Polonaise. In 1956 they were prepared to do the same again, but in 1960—"well, times have changed a bit, we must count our blessings, and be realists."

For it is still a gray, muted, uneasy world, the world of the Poles today, even if you can buy Erle Stanley Gardner at the bookstall, or fondle Miss Brigitte Bardot from a distance at the cinema. There is plenty of fun in Warsaw, and a lively coffeehouse society, but behind the greasepaint lies the pallor of defeat.

What does a patriot do, born into such geography? Make the most of things, help his country revive and develop, disregard the bitter truths, and foster the compensations? Or dream of a campaign that is doomed in advance, risk losing all that has been won, summon the intoxicating call to arms, like the city trumpeter at Kracow, and man the barricades again?

Most Poles, I think, have found a formula: to remember the present shape and temper of Europe, and pray to the Virgin that, if things can get no better, at least they will not get worse again.

[From the Chicago Sun-Times, Apr. 26, 1960]

REDS' HALFWAY HOUSE: POLES STRIVE FOR IDENTITY

(By James Morris)

WARSAW.—Although Poland, by virtue of her own inimitable temperament, scarcely conforms to the intellectual, the spiritual, or even the social pattern of the Soviet bloc, nevertheless her regime is at heart orthodoxly Communist. Wladyslaw Gomulka's ends are the standard Communist ends, though he may employ, from conviction or from expediency, different means to achieve them. In 1956, when Poland's grim period of Stalinism ended, Soviet Prime Minister Nikita Khrushchev, separately appraising a ticklish situation, presumably reached this common conclusion: That the Poles being the people they were, their political system had better be relaxed. If rule by secret police was going to incite them to violence, very well then, call off the cops (the Poles were perhaps fortunate that their moment of catharsis occurred before the Hungarians, too, were goaded into defiance).

Today in Warsaw you hear constant ominous hints that the regime's methods of control are getting tighter, harsher, cruder again. If this is true, it is because liberalization has not worked, from a technical point of view.

Some people say that the Russians, looking with a jaundiced eye upon the existentialists, the burning catholicism, the abstract canvases, and the free speech of Poland, have warned the regime that leissez-faire has gone too far.

It is more likely, though, that if an element of pseudo-Stalinism is returning to Poland, it is because the country is, in economic terms, a mess.

SLIPSHOD ECONOMY A LEGACY OF PAST

Everybody admits that the economy of the country is slipshod and ill-organized. This is only partly due to communism, and is chiefly the legacy of a ravelled past.

Life among the Poles can be delightful, but could hardly be called efficient, or even indeed predictable. The queerest anomalies of economics and logistics give a truly Irish piquancy to financial affairs, and half Warsaw seems to conduct its commercial affairs with a wink and a rubbed thumb.

The lift which took me to the top of the 37-story Palace of Culture had a broken indicator, so that the operator could only tell by intuition which floor we had reached: and this struck me (although she was perfectly unperturbed, and indeed wryly amused by the situation) as revealingly symbolic.

In Poland nothing works quite as you expect it to, or when. The big State-run stores are slovenly and illogical; the city streets are thick with sludge; petty embezzlements complicate half the official accounts.

Poland feels dishevelled, incompetent, and—compared with either Moscow or New York—unkempt. Legend has it that the government, as a public service, erected in the streets of Warsaw some slot machines which would instantly pay the customer 1 zloty upon the insection of a 2-zloty piece. Why were they given up? Overheads too high.

REDS SEEKS TO CLEAN UP SHAMBLES

All this shambles the Communist regime still hopes to reduce to order; and even the most blatant of their opponents admit that some discipline is necessary—though what they mean by the phrase, some subsequent dry witticism usually makes obscure.

Whatever the nature of her government, Poland can only suffer from absenteeism, corruption, alcoholism, and general social bloody-mindedness.

A few idealists or dizzy visionaries might argue that the more ramshackle the Polish economy remains, the more precarious will be the regime; but most honest Poles would probably agree that in a country whose standards of living are still pitifully low, some degree of personal discipline is, even in today's circumstances, a civic duty.

How to achieve it? We would say by increasing incentives, whose paucity keeps the Polish worker in a condition of disgruntled apathy; by widening the private sector of industry and commerce, now the subject of steady, rather than vicious discrimination; by making more allowance for the Polish sense of nationality and individualism; by brightening and warming life with infusions of national self-respect.

But all Communists might answer that they have tried a dose of liberalism, and it has failed. If nonconformism does not bring Poland to her senses, then perhaps uniformity will.

STALINISTS REEMERGE IN PUBLIC OFFICE

There are indeed signs—straws in the wind, no more—that the regime may be tightening its dogmas. One or two well-known Stalinists have cropped up in office again.

There are hints that the clamp of socialist realism may be reimposed on art (though the senior official I consulted at the Ministry of Culture was, I must in fairness report, and believed that whatever the state did officially to guide art into certain channels, the artist must himself be free to experiment and sell his pictures as he pleased).

Communists have recently gained control of the Writers' Union—here, as in the other countries of the Socialist bloc, one of the strongholds of free thought. Translators of Western literature are, it is said, finding it harder to get their work accepted by the state publishing houses.

New attempts may be made to persuade the reluctant peasants into collective or cooperatives. It is whispered that the church has been warned to accept certain state edicts, or face harsh consequences—in particular, to modify its opposition to birth control.

I find it difficult to believe that with Khrushchev's ideas paramount among the Eastern countries, the full terror treatment is to be revived in Poland (tenaciously though it apparently lingers on in some of her neighbors' territories). The springs of the system, though, undoubtedly exist, like a mastiff leashed or muzzled.

LEGAL SYSTEM IS NOW ORGANIZED

The Polish legal system is now organized fairly and according to code, only occasionally bolstered, so it is said, by threats to withhold a passport, or promises to grant one; but there does also exist a framework of military courts which technically have the power, though it is now never exerted, to sentence people for political offenses without public trial.

It is all there, lying dormant: the secret courts, the camps, the whole hideous apparatus of despotism.

We may assume that Gomulka does not want to use these weapons—first, because he suffered enough himself under Stalinism, and is not by all accounts a cruel man; secondly, because Khrushchev, exuding peace and friendship, would probably not approve; thirdly, because world opinion would be inexpressly shocked; fourthly because, as any ex-Nazi will tell you, you never know how the Poles will react.

UNCERTAINTY IS POLAND'S FATE

Thus Poland seems fated to compromise or uncertainty. Today the Poles do not

know whether they can haul a new national identity out of the tragedy of their situation, whether they must remain a precarious halfway house, or whether in the long run they will be absorbed once and for all in an inexorably expanding Mother Russia.

A melange of figures crosses my mind, when I survey my stay among this striking people.

Young or old, successful or awash, in all their eyes there lurked, I thought, that most affecting of the qualities, pathos. The Poles are pathos personified, 30 million souls of brave pathos, through whose affairs there runs, like some distant plucking melody, an unbroken threat of sadness.

Truth About Farm Income

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. HOEVEN. Mr. Speaker, the farm income picture gets twisted around once in awhile, especially when statistics are not handled correctly and accurately.

We have all heard the statement that statistics can be used to prove almost anything, but frankly, I was very much surprised when I read a full-page advertisement appearing in the Wall Street Journal on April 22, 1960, regarding farm income. This advertisement made several statements which I feel do not accurately reflect the current farm income picture.

First of all, the headline on the advertisement was "In 1959 Average U.S. Family Income, $6,470; Average U.S. Farm Family Income, $9,978." The point that immediately struck me was the figure of $9,978 which was alleged to be the U.S. farm family income. In the accompanying tables, though, this income was described as gross farm income. Needless to say, gross farm income is not the most important of the various measuring sticks of income. When all is said and done a farmer, like any businessman, is concerned with net income, the final result of his gross income minus his many production expenses.

I probably would not have quarreled with the advertisement if at least the gross income figures quoted were accurate. They were not. The accompanying chart used in the advertisement, indicated that 1959 gross farm income was $46.3 billion. The latest figures that I have been able to obtain from the Department of Agriculture show that 1959 realized gross farm income was $37 billion, over $9 billion less than that indicated by the advertisement. The Department of Agriculture's calculation of gross farm income includes cash income from marketings, Government payments, value of home consumption, and rental value of dwellings.

What is really the most objectionable and misleading aspect of this entire advertisement, Mr. Speaker, is the impression it gives of farmers never having it so good. This is just not true. We who are close to agriculture know that the farmer is facing many economic difficulties and we are trying to do something about them. This type of misleading material does not help.

In order to keep the record absolutely straight, I would like to cite an excerpt from the latest "Farm Income Situation" published by the Department of Agriculture on April 25, 1960.

On 1960 farm income the Department says this:

Developments since last fall have enhanced farmers' income prospects in 1960. The index of prices received by farmers has risen 5 percent since mid-December—mainly because of higher prices for hogs, cattle, chickens, and eggs—and is now only slightly below a year ago. Prices of farm products during the remaining months of 1960 are likely to average about the same as, or even slightly higher than, the corresponding months of 1959. Consequently, if growing conditions this year are about average, cash receipts from a continued heavy volume of farm marketings may equal those of 1959. Some further increase in farm production expenses seems likely, however, so realized net income of farm operators from farming may fall slightly short of the $11 billion realized last year.

The advertisement also lists average net income of farm operators per farm in 1959 at $2,547. This figure is much closer to the truth of farm income than is the $9,978 figure cited by the advertisement, and remember, the farmer must still pay for all his living expenses and capital improvements out of this income.

In conclusion, Mr. Speaker, let me say that it is my sincere hope that we can soon get at the job of doing something constructive about this farm income situation—and by that I mean, first, getting straight what the real situation is, and second, approaching the problem in a forthright and honest manner.

Let's Pay the Postman and Civil Servants, Too

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. HOSMER. Mr. Speaker, almost every year Congress is called upon to deal with the problem of postal and civil service workers' salaries lagging behind the cost of living and creating substantial hardships. A great furor arises, much time is consumed and trouble created for Congress and Government employees alike. Eventually some "better late than never" pay scale revisions are made which like as not are behind the times before they are written into law.

Just last week administration spokesmen opposed the passage of pay raise legislation this year in testimony before the House Post Office and Civil Service Committee. A study is being made, they said, which will not be completed before September, and thus the whole matter should go over until next year. I do not agree with this argument for the reason that there is an apparent need now for upward revisions in these pay scales. What the study will show, undoubtedly, are many discrepancies between pay scales for various Federal employment which should be adjusted and equalized. This can be done as well after current legislation is enacted as before. Savings clauses could be written into present bills to obviate this kind of problem.

While discussing this subject it is well to point out that obvious inadequacies in our present procedures for handling Federal salary scales are responsible for the never ending inequities which consume the time of Congress and everyone else concerned in dealing with them. These can and should be overcome by appropriate administration recommendations followed up by prompt congressional action. Present procedures for adjustment of pay rates of so-called "blue-collar" Government workers point the way. These are Federal employees such as carpenters, machinists, and other craftsmen whose hourly wages are tied to the comparable wages of their counterparts engaged in similar civilian employment in the same area.

At intervals area wage boards determine prevailing rates of pay in a geographical area and Government pay rates are adjusted accordingly. No lobbying is involved; Congress does not have to pass a law; substantial justice is afforded with regard to pay scales promptly and fairly.

There is no good reason why a similar system, with all its attendant advantages, could not or should not be worked out for postal workers and almost all civil service workers.

One factor that so far has blocked this kind of legislation appears to be the negative attitude of various national associations of Government and postal employees. They argue that such a system might result in lower size pay checks for their members in some small city, for instance, as compared to a member doing the same job in a metropolitan area. They say it is not fair. They demand that all be paid the same.

But should they? Or more properly, in fact, are they? The pay check of a man in the small town where living costs are low represents much more actual, real pay than a pay check for the same amount handed to a man who lives in the high-cost-of-living metropolitan area. I think the unfairness of that proposition and the unsoundness of the position of these national organizations is quite apparent. I think the wisdom and fairness of tying flexible wage rates to prevailing conditions in an area of the country is certified by the fact that it is now done both in private industry and for Government blue-collar workers.

Let us do with the postal workers and the civil service workers what sound principles and common sense indicate we should do. Let us modernize our Federal pay procedures to meet the needs of the times and of the places where our public servants work.

On the subject of current pay bills, the Long Beach Independent-Press Tele-

gram recently carried the following approving editorial:

[From the Long Beach Independent-Press Telegram, Apr. 21, 1960]

LET'S PAY THE POSTMAN

With airmail zooming from coast to coast in 4½ hours and with facsimile transmission in the offing, the U.S. Post Office is keeping pace physically with the jet age. Sadly, it still pays its employees a horse-and-buggy wage.

In 11 years postal workers have received four pay raises totaling 52½ cents an hour. A Long Beach postal clerk in the top pay grade with 10 years experience takes home $159.16 to his wife and two children. Every 2 weeks, that is.

Pay for postal workers ranges from $2 to $2.42 per hour. Figure that up at 40 hours a week. While most of the rest of the economy has been rising on a spiral of wage and price hikes, the postal workers have been practically standing still.

We have supported the postal workers' fruitless efforts in recent years to get a decent pay raise. And we support the current congressional move to give post-office employees a 10-percent pay increase.

Every time a postal pay proposal comes up in Congress, the argument is heard that pay shouldn't be increased unless there is also a substantial increase in revenues.

Although we agree that the Post Office should be put on a sound financial footing, we consider it unfair to tie a Government employee's pay to the price of postage stamps just because he happens to work in the post office.

These workers are getting starvation wages. Congress should give them a solid increase, and the President should sign it into law.

A Bill To Amend the Norris-LaGuardia Act of 1932

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. HOLLAND. Mr. Speaker, at the request of Mr. Thomas Fagan, the president, and the other elected officials, as well as the membership of Local 249, General Teamsters, Chauffeurs, and Helpers, International Brotherhood of Teamsters, one of the outstanding locals in my district, I am introducing this bill designed to take the Federal courts out of running labor organizations. This bill would amend the Norris-LaGuardia Act of 1932.

Mr. Fagan said "that since Congress saw fit to pass the Landrum-Griffin bill last year providing that the union membership—and only the membership—has the right to make the final determination of making local union policy, then the intent of Congress is being disregarded when the courts take over the union affairs."

The Landrum-Griffin bill—

He continued—

specifically states that the ultimate remedy of any internal solution is entirely up to the membership of that union, and that no officer can be removed from office except by membership vote.

I quite agree with Mr. Fagan and I feel that our Federal courts are to hear cases and make decisions and should not have the right to manage the affairs of either business or labor, nor the right to run businesses or labor organizations.

This proposed legislation will enable the Federal courts to devote themselves to their normal judicial functions without the need to consider or undertake the administration of any labor organization. It will also permit the union officers, rather than judicial appointments, to run the labor unions.

I would like to point out that unless this proposed legislation is passed, the present condition merely provides another avenue for those who are opposed to organized labor to eliminate it by bleeding the treasuries for excessive charges to cover the costs of paying the expenses and salaries of these "judicially appointed administrators." According to the latest reports released by the Federal courts, it has cost the treasuries of the local unions nearly $1 million to pay the monitors and the staffs as well as the legal fees.

The antiunion forces, which have flourished during the past 7 years, apparently realize they cannot beat the unions so they will, if possible, try to break them financially. They know if union funds are spent to cover salaries and expenses of judicial appointments and lawyers' fees, there will not be any available to promote organization work—if they cannot beat them, they plan to break them.

I feel the passage of this amendment will at least give the local labor unions a fighting chance to use their money for the interest of the membership.

Who Will Be Next?

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. DORN of South Carolina. Mr. Speaker, since the State Department encouraged the overthrow of Syngman Rhee, founder of the South Korean Republic, by raving mobs, we are beginning to wonder who will be next. The mobs now forming in Japan, if encouraged by the Secretary of State, could overthrow the Government of Japan. The State Department's conduct in Korea could be the signal for mobs to again form on Formosa to overthrow Chiang Kai-shek. Mobs in the Philippines, with State Department encouragement, could undermine the splendid government of the friendly Philippine Republic. The precedent set by the State Department in South Korea could wreck our whole defense in the Pacific. It could place American troops and airbases in great jeopardy and roll back our defense line to our very coastline of California.

This Congress should immediately investigate the motives of our State Department's alinement with South Korean mobs and report to the American people.

The Panama Canal Zone could be next. The American people want to know.

Mr. Speaker, I commend the Washington Evening Star for questioning the propriety of our State Department's taking sides with raving mobs against a duly constituted authority in a friendly free Republic.

The following is an editorial published in the Washington Evening Star on April 26, 1960:

CAPITULATION IN KOREA

The street mobs, assisted indirectly by our own State Department, have take over in Korea. And the spectacle is not one which augurs well for the American position in that part of the world.

President Syngman Rhee, who more than any other man has kept Korea alive, has offered to resign if the people desire. He has promised new elections and had said that his handpicked Vice President, Lee Ki-poong, will resign from all public offices. Even so, the mobs, drawing their hard core strength from high school and college students, continued to storm through the streets of Seoul, burning, wrecking, and shouting "death to Syngman Rhee." The Korean troops did nothing effective to disperse the mobs, composed initially of some 5,000 students and 200 professors. According to the Associated Press, the soldiers had been threatened with court-martial if they killed or wounded a demonstrator. By daybreak, again according to the Associated Press, "the city seemed virtually abandoned by police and troops, and the crowds took complete control."

In a word, the Government of Korea, overwhelmingly elected a month ago, has capitulated to the mobs—mobs which in numerical terms represent but a small fraction of the Korean people. Possibly it is doubtful whether our Government could have prevented this if it had supported Syngman Rhee, or even kept hands off. But it did neither. Instead, when police fired upon and killed mob members who were attempting last week to storm the President's residence in protest against fraud in the election, our State Department publicly rebuked Mr. Rhee. And again yesterday our Ambassador in Seoul called upon Mr. Rhee to speed action on the "justifiable grievances" of the Korean people—this while the mob was surging through the streets.

Now the inevitable has happened. The mobs, certainly encouraged by the State Department's attitude, appear to be in control. It is difficult to see how Syngman Rhee, even though he personally still may have the support of a majority of Koreans, can govern effectively—except on the mob's terms. For this result, our State Department must accept a large responsibility. How will it deal with the juveniles who have toppled Syngman Rhee? Are Mr. Herter and his associates really prepared to do business in Korea with a new leader—possible one cast in the Fidel Castro mold?

Wilderness Legislation Needs Study

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. WESTLAND. Mr. Speaker, the Western States Land Commissioners As-

sociation at its convention in Phoenix, Ariz., April 14, 1960, adopted a resolution which refers to legislation before the Congress.

I particularly refer to Members of this body the second paragraph of this resolution. I agree that the National Outdoor Recreation Resources Review Commission should study and report upon the needs for wilderness areas before any legislation concerning such areas is passed.

The resolution follows:

RESOLUTION C

Whereas it has come to the attention of the Western States Land Commissioners Association that there has been introduced in the current session of Congress, S. 1123, H.R. 5523, and numerous other bills for the permanent creation of wilderness areas; and

Whereas the National Outdoor Recreation Resources Review Commission, established to study recreational needs throughout the United States, has only recently been constituted and appointed, and has not yet had an opportunity to study or to report upon the needs for wilderness areas; and

Whereas the present administration of wilderness areas by existing agencies is wholly adequate and satisfactory, and the creation of additional organizations for this purpose would entail unnecessary duplication, confusion and expense; and

Whereas the locking up of vast quantities of the natural resources of the Western States without first having made a complete study thereof would have an adverse economic impact upon the overall economy of said States: Now, therefore, be it

Resolved, That the Western States Land Commissioners Association in convention in Phoenix, Ariz., on April 14, 1960, hereby declares and reaffirms it to be to the best interest of the 18 western member States to oppose the passage of said wilderness bills; and be it further

Resolved, That the secretary of the Western States Land Commissioners Association be and is hereby directed to transmit copies of this resolution to the respective member States delegations in Congress, and such congressional committees as may hold hearings on said bills.

More Support for Item Veto

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. SCHWENGEL. Mr. Speaker, in further support of my efforts to secure the item veto authority for the President, I wish to call attention to two editorials.

One of "The Item Veto" appeared in the Des Moines (Iowa) Register earlier this year after the President's state of the Union message. The other editorial, "Schwengel Proposes Item Veto," is from the Cedar Rapids (Iowa) Gazette for Monday, April 18, 1960.

Under leave to extend my remarks, I ask unanimous consent that both editorials appear in the Appendix of the RECORD.

[From the Des Moines Register]

THE ITEM VETO

President Eisenhower Wednesday renewed his bid for a constitutional amendment that would give the President power to veto individual items in appropriation bills.

Appropriation measures are now submitted to the Chief Executive on a take-it-or-leave-it basis. The knowledge that the President cannot eliminate individual items in a bill frequently prompts Congress to attach riders to appropriation measures. The result is that the Chief Executive may find it necessary to give his approval to objectional legislation in order to get necessary appropriations. Sometimes a particularly objectional item in an appropriation measure will result in a veto of the entire bill, thereby killing the good with the bad.

Numerous Presidents have recognized the problem and urged adoption of the item veto. The idea already has been given a thorough tryout. The item veto was first adopted by Georgia in 1861 and the Governors of 41 States (not including Iowa) now have item veto authority. Congress itself has recognized the value of allowing a Chief Executive to consider appropriation items separately. In passing the Hawaii and Alaska statehood measures, Congress gave express authority to the new States to make provision for the item veto in their constitutions.

Congress is reluctant to give the President added authority at its expense. But Congress needs to take a broader view and help provide this authority in the interests of good governmental practice.

[From the Cedar Rapids Gazette, Apr. 18, 1960]

SCHWENGEL PROPOSES ITEM VETO

Iowa's First District Congressman, FRED SCHWENGEL of Davenport, has introduced three bills in the House that would give the President the power of item veto if adopted.

The item veto would permit the President to approve or disapprove separate items in any bill sent to him by Congress. Representative SCHWENGEL's bills would give the President this authority and, moreover, would give him the added authority to disapprove or reduce amounts of separate items in all appropriations bills, as well as the right to approve or disapprove items separately in appropriations bills except those which have the approval of the agencies involved, the Bureau of the Budget and the appropriate congressional committees.

The item veto is not well known to Iowans, probably because the Iowa law doesn't provide for it. This does not mean that it isn't a proper delegation of power, however, for the laws of several other States do provide for it.

Our feeling is that use of the item veto in our Federal Government could be more readily justified than in our Iowa State Government, due largely to differences in the form in which legislation may be passed and sent to the President and Governor.

In Iowa each bill sent to the Governor must deal with one subject only. Attempts to attach amendments dealing with another subject to a bill are ruled not germane to the original subject and must be dealt with separately by the legislature, if at all.

Congress has a continual field day attaching amendments of unrelated subject matter to main bills. Quite frequently, some bill that couldn't possibly win approval under its own power is attached to a popular bill and sent to the President on a take it all or leave it basis. Power of item veto would enable the President to weed out such items from bills which might be essential to the public interest in other respects.

Of course, there are times when the item veto would work in the public interest in Iowa, too. Had Governor Loveless been vested with this power during his first term he probably would have used it to cut out the 3-percent sales tax rate extension from the remainder of the revenue bill which also extended individual and corporate income tax rates that had been in effect the 2 previous years. As it was, he was forced to veto the entire revenue bill in order to veto the 2½-percent sales tax rate.

Representative SCHWENGEL is embarking on a long road to get favorable action on the item veto. But we wish him well.

Soviet Labor Unrest

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues an article by Mr. Harry Schwartz which appeared in the New York Times of April 24, 1960, entitled "Soviet Labor Unrest Seen; Strike Reported in Siberia":

SOVIET LABOR UNREST SEEN—STRIKE REPORTED IN SIBERIA

(By Harry Schwartz)

Reports reaching the United States tell of rising dissatisfaction among workers in the Soviet Union during recent months, discontent born largely of pay cuts, higher work norms and commodity shortages.

At least one major work stoppage is reported to have taken place earlier this year in the major West Siberian industrial center of Kemerovo. Reports from other Soviet cities tell of heated meetings at which workers have openly voiced their complaints.

Diplomats in Moscow who have talked with Soviet economic leaders believe that the Soviet economy has not been doing well recently. That impression sharply contradicts the glowing claims of rapidly rising industrial output made in the recently published official report on industry during this year's first quarter.

WORK STOPPAGE CONFIRMED

The evidence of rising worker dissatisfaction comes from Western diplomats stationed in the Soviet Union. Other information on the problem was given in the press. Bitter complaints were printed recently in Pravda about serious lags in capital investments, the foundation for planned increases in output.

A report that a major strike occurred late last year at the construction site of the giant Karaganda Iron and Steel Plant in Temir-Tau in Kazakhstan was confirmed several weeks ago by the head of the Kazakhstan Communist Party, D. A. Kunayev. Dissatisfaction with conditions of life and work at the site was given by Mr. Kunayev as the reason for the "disruptions" in work.

The sources of dissatisfaction behind the unrest appear to be the following:

Continued shortages of consumer goods in most areas. An American who was in Moscow earlier this year reported that it was a

grim winter even for the best supplied city in the country. At times last month even milk was unavailable. The major newspapers, such as Pravda on April 8, have mentioned continuing shortages of consumer durable goods, such as refrigerators, television sets and furniture, but have said little about the reported deficiences of more basic commodities.

The impact of the program for reorganizing the wage and salary system, which is associated with preparations for the scheduled shortening of the standard workweek from 46 to 42 hours.

No details are available on the most serious expressions of this dissatisfaction, but some hints have appeared in reports on trade-union meetings printed by the union organ Trud earlier this month.

At the sixth congress of coal miners, Trud reported, "serious grievances" against the authorities in charge of wage policy were voiced by many delegates. Trud gave no further details.

A recent congress of Latvian unions heard reports about "serious errors" in the planning of wages in machinery, food, and fishing enterprises. A similar meeting in Turkmenistan was told of "serious errors" in planning wages for oil workers, as well as of poor planning of consumer goods production.

The official Communist Party magazine, Kommunist, conceded, 2 months ago, that in some cases the new salary system meant a reduction in take-home pay for workers.

According to Kommunist, the "baseless high earnings" of some workers in the past were due to low production quotas. These, the magazine said, the workers could easily exceed, thus getting large bonuses. Moreover, it said, workers have been classified in pay grades higher than those to which their skills and performance entitled them.

Higher production norms are being set for many workers. This is part of the effort to increase productivity so that the transition to a shorter workweek may be made with the least need for hiring additional workers.

A Moscow taxi driver told an American visitor recently that under the new regulations he must clean and check his vehicle on his own time, an order that forces him to work an hour a day without pay. This causes him greater loss than the nominal gain from the 4 hours less he supposedly works each week.

There is said to be much resentment among higher paid workers and managerial personnel because of reductions in their earnings. These were imposed as part of the drive to narrow inequalities among citizens. Kommunist has reported that the former ratio of earnings between a plant director and a foreman varied from 3–1 to 5–1, but was being narrowed to the range of 2–1 to 3–1.

A spectacular instance of the impact of the egalitarian moves is reported to be the sharp reductions in earnings received by outstanding Soviet artists. Such men as David Oistrakh, violinist, and Emil Gilels, pianist, often received thousands of dollars for a concert. Their pay now is said to be well under $500.

Free Enterprise, Best Incentive for Bold, New Ideas

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. ALGER. Mr. Speaker, whenever we are called upon in Congress to spend more money or to expand welfare programs, we are told we must do it because we should not be afraid of bold, new ideas. The fact is that bold, new ideas are not created in a welfare state. Man's greatest progress has been made under our own system of free enterprise. No socialist society, no country in which the Federal Government dominates completely the lives of the people has offered such great abundance, such opporunity for advancement, such a high standard of living, all the good things of life to the individual as has been offered in America. I submit that the only source of bold, new ideas is the freedom of men to operate in our kind of society. I commend for your study the following editorial from the Wall Street Journal, edition of April 26, 1960:

OUT OF STEAM

As you may have noticed, Congress has been surprisingly sleepy for an election year. Even so, the liberals who are so numerous in the Democratic-controlled Congress have no intention of ending the session with do-nothing tags on their lapels.

Instead they intend to push hard, as a recent report in this newspaper indicates, for a number of things, including some kind of plan for Federal help for medical care for the aged, liberalization of social security, Federal aid to "depressed areas," and probably more subsidies for housing.

Whatever else may be said of these proposals, they certainly cannot claim originality. Even socialized medicine, which embraces Federal medical care for the aged, was under intense discussion in Truman days. As for liberalizing social security, it has become, to the shame of the politicians, a traditional election-year sport. And so goes the procession of weary ideas.

Indeed, it is something of a paradox that liberals are constantly saying the country needs bold new programs but rarely suggesting any. Consider the liberal Presidential contenders: In all the floods of words so far this year no fresh thought swims.

What's the matter? Are American liberals, like their ideological relatives in Europe, running out of intellectual resources?

There are reasons for believing that such may be the case. Contemporary American liberalism has only one unifying force—its faith in Government action as a cure-all for human problems. That approach automatically creates endless disagreement among liberals over how far the Government should go in a given situation. One liberal may favor a regimented economy, another a halfway house, still another relatively few controls.

Or if social security is to be perpetually "liberalized," how can a liberal logically argue it should be liberalized only so much at a given time? If the Government is to tax everyone to provide a little medical care for the relatively few indigent aged, why should it not provide cradle-to-the-grave security for everyone? In fact, if the premise is accepted that Government is the very fount of the good society, must not a consistent liberal contend that the Government should take over everything and so bring about the best society?

These confusions are profound and they plainly dismay many liberals themselves. They help explain a further trouble of the liberals: They cannot offer anything truly bold or new because their basic approach is neither. There is nothing bold or new about throwing up one's hands at every problem and saying, "Let Washington do it." To be sure, innumerable strings can be attached to that bow, but the bow remains the same one of Government spending, and so the liberals' proposals finally all sound the same.

This lack of imagination is causing serious difficulties in the liberal-like parties in Europe. The Labor Party in Britain, the Social Democrats in West Germany are in political disarray because they are in intellectual disarray. Britons are fed to the teeth with talk of nationalization, and the Laborites have little else to offer; the German Social Democrats have junked much of their Marxist dogma.

In both transatlantic cases the big-government advocates have run out of ideas and run into the voters' realization that free private initiative is the only real source of boldness, innovation and prosperity.

We do not suggest that American liberals are in political trouble yet. They are, however, in deep philosophical trouble. That is why you are unlikely to hear from them, in Congress or the campaign, any sparkling new ideas for dealing with the Nation's problems.

Twenty-five Years of Soil Conservation

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. POAGE. Mr. Speaker, today, our Nation observes the 25th anniversary of the Soil Conservation Service.

I am confident that April 27, 1935, will be recorded as a turning point in the history of American agriculture, and of world agriculture. When the Congress adopted the Soil Conservation Act that created the Soil Conservation Service as an agency in the U.S. Department of Agriculture, a government for the first time in history established a national policy for the deliberate conservation of its soil and water resources.

Since then we have set a pattern and a policy of conservation which scientists of other countries come here to study and to copy. The Soil Conservation Act signed by President Franklin D. Roosevelt on April 27, 1935, after the 74th Congress had passed the legislation without a dissenting vote, established the United States as a pioneer in the field of soil and water conservation.

Of particular interest to me has been the watershed development and flood-prevention phase of the overall soil and water conservation program. Watershed development has been a key part of the Soil Conservation Service program since its beginning. It set up its first demonstration projects within watershed boundaries. Many of the early soil conservation districts were organized on a watershed basis.

The formal watershed approach to soil and water conservation began in 1936 when the Congress passed the Flood Control Act. On May 15, 1952, I introduced the first bill (H.R. 7868) to establish a flood-prevention program. The idea was not enacted into law for 2 years but in 1953 Congress authorized the pilot watershed program. The next year, Public 566, the Watershed Protection and Flood Prevention Act, was passed and speeded up this work on a broad, national scale. It places the initiative in the hands of the local citizens. It gives them a chance to develop their own watershed

plans. When they have completed their plans and organization, the Federal Government may come in at their invitation as a junior partner to help them carry out their watershed program. That is the American, the democratic way of doing things.

Sometimes, of course, just because it is the democratic way, things do not get done as quickly as the local people and we in Congress would like. We have to be careful in spending the taxpayers' money. We have to see that a proposed watershed program is feasible and economical; that it will produce benefits in excess of costs. There are times when a project has to wait until the landowners voluntarily make available easements or rights-of-way where dams are to be built.

However, we do get things done just as fast as money is available. This is especially true where the Soil Conservation Service is providing leadership. We get this important work done without sacrificing any of our essential freedom, and without relinquishing our individual rights.

During the past year, as the people have gained experience, the watershed program is moving faster. At first, as applications for Federal participation came in, progress was slow. But now, with hundreds of applications approved for construction work, we are moving into high gear. We are gaining momentum. The pace is steadily increasing. The requirement for funds is greater than ever. We need and seek the understanding of the Appropriations Committee.

I also want to recognize the other parts of the Soil Conservation Service's responsibilities, such as technical service to soil conservation districts and the Great Plains conservation program. All of these various parts are important and necessary. They all fit naturally into the whole, well-rounded program envisioned by the Congress when it passed the original Soil Conservation Act 25 years ago.

Under that act and the additional legislation adopted since then, the Soil Conservation Service has been doing a tremendous job. It is working with both rural and urban people in their efforts to conserve and develop our essential natural resources of soil, water, plants, and wildlife. On this anniversary the Nation salutes the Soil Conservation Service for its first quarter century of devoted, productive work. It is our sincere hope and expectation that the next 25 years will be equally as productive.

Unless we save our soil it will surely not save us.

Low Ethics in High Places

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New Republic magazine of April 25, 1960:

VAN BUREN TO EISENHOWER

It has been learned, not from the newspapers, that an Arabian stallion, a gift from President Bourguiba of Tunisia to President Eisenhower, was sent by truck to Mr. Eisenhower's farm in Gettysburg, after spending 12 days in quarantine in New Jersey. The public may be excused for looking this one in the mouth. Article I, section 9 of the Constitution of the United States says: "* * * No person holding any office of profit or trust * * * shall, without the consent of the Congress, accept of any present, emolument, office or title, of any kind whatever, from any king, prince or foreign state."

And in a letter dated May 8, 1840, President Van Buren in declining "two good-bred Arab-Nijd horses" wrote the Sultan of Muscat as follows: "I look upon this friendly proceeding on your part as a new proof of your Highness' desire to cultivate with us amicable relations, but a fundamental law of the Republic which forbids its servants from accepting presents from foreign States or Princes precludes me from receiving those your Highness intended for me."

Joe D. Newton of the National Postal Postal Transport Association

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. HUDDLESTON. Mr. Speaker, Joe D. Newton, of Birmingham, Ala., has long been considered to be a fixture on the scene of postal employees relations in Birmingham and throughout Alabama and the Memphis postal region. Mr. Newton is president of the Alabama Branch of the National Postal Transport Association, the organization which represents postal employees who work in railway mail cars, in highway post offices and at airports and in terminal post offices throughout the United States. We thought Mr. Newton would remain as president of the Alabama branch for as long as he continues in the postal service. I have just learned that Mr. Newton will not be a candidate for reelection when his term expires on May 7, 1960. I hope that some other avenue will be found for utilizing Mr. Newton's unique talents because certainly, now if ever, postal employees need capable spokesmen to defend their position.

As a Member of Congress I have been very close to the National Postal Transport Association and even before coming to Congress I have been intimately friedly with Mr. Newton. I may have been the first Member of Congress to ride in a railway post office car. Certainly I was first in the sense that the ride, which was arranaged for me by Mr. Newton, was accomplished even before I came to Congress in 1954. Under Mr. Newton's wise guidance I learned the specialties of railway mail clerks, the things they need to know, the importance of the service they perform. Today, 6 years after that ride on the railway post office car, I realize that no one either within or outside the Post Office Department has yet developed a method of mail handling which will equal the idea of en route distribution as a benefit to the postal service.

Partly because of the education I received on the trip, and partly because of the supporting material furnished me by Mr. Newton and his colleagues, all my distinguished congressional colleagues from Alabama joined me in a joint appeal to the Post Office Department to establish, or to extend highway post office service. This was done in the realization that with a contracting railway transportation structure the best alternative to the superlative railway post office would be to transplant the same type of operation to the Nation's highways.

My colleagues and I also joined in an appeal to the Post Office Department to continue the district transportation office in Birmingham. From what I can see the information provided by Mr. Newton to the Senators and Members of Congress from Alabama was extremely persuasive and I feel that had it not been that the program of closing district offices was a nationwide plan, we would have been able to succeed permanently as we did initially in maintaining the transportation office at Birmingham.

Thus, if after his term of office expires on May 7, Mr. Joe D. Newton of Birmingham continues to be a representative of postal employees, I hope that he will be able to exercise his persuasive talents at the level of the Memphis postal region. Communications, after all, are the heart of the postal service and so too, I as a Member of Congress, feel that I will be able to communicate more effectively with the several levels of the Post Office Department if Mr. Joe Newton, president of the Alabama branch of the National Postal Transport Association is persuaded to change his mind and to continue to serve as an employee representative.

Secretary of Labor James P. Mitchell Urges Railway Labor and Railway Management To Adopt a Common Viewpoint by Recommending a Fundamental Overhauling of the Interstate Commerce Commission and Gradual Elimination of All Government Subsidies in Transportation in America

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. VAN ZANDT. Mr. Speaker, Secretary of Labor James P. Mitchell, in an address at the Railway Employees' Department Convention, Chicago, Ill., April 27, 1960, suggested to railway labor and railway management that they join in recommending a fundamental overhauling of the Interstate Commerce

Commission and gradual elimination of all Government subsidies in transportation in America.

Pointing out that the railroads no longer have a monopoly, Secretary Mitchell said "so the regulations that govern them must be accommodated to the new competition." Urging that an overall approach on the part of the Federal Government to transportation is an essential, Secretary Mitchell continued by stating:

We need a fresh approach to economic policies, regulation, subsidies, and taxation. And certainly for the railroad industry no one is in a better position to suggest the right changes than the men and women of the railroad industry, both those who work and those who manage.

Secretary Mitchell pointed out that the railroad industry while a major element today in a total system of transportation infinitely more complex and variable is but only one element, and that the relative position of the railroads in competition with other modes of transportation has declined.

It is my belief that Secretary Mitchell's address will be of great interest to my colleagues and for that reason at this point I wish to incorporate it in my remarks:

ADDRESS BY SECRETARY OF LABOR JAMES P. MITCHELL AT THE RAILWAY EMPLOYEES' DEPARTMENT CONVENTION, CHICAGO, ILL., APRIL 27, 1960

I am pleased to have this opportunity to comment upon the present situation of the American transportation system, especially that of the railroads and the men and women who make their living in that industry.

It will be the judgment of history that in recent decades other modes of transportation have successfully challenged the former monopoly of the railroads so that this basic mode of transportation now finds itself increasingly in need of a workable, dynamic competitive position.

Not too many years ago a person traveled from one place to another in America by rail, or he stayed home. An industry shipped its goods and received its materials by rail, or not at all. The railroads tunneled mountains, crossed rivers, spanned plains, and what moved for any distance moved over them.

Today the railroads are a major element, but only one element, in a total system infinitely more complex and variable. It is true that both passenger and freight traffic on the railroads has increased absolutely; it is also true that the relative position of the railroads as a mode of transportation in competition with others has declined.

With the steady growth of the American economy has come a network of high-speed highways that link major metropolitan areas and small towns. Powerful diesel trailer trucks, capable of delivering large loads, move over this network of roads and offer a reasonable alternative to shipment by rail, certainly for the short haul.

With a rising standard of living, automobile ownership has grown to the point where the average American has, parked outside his house, an attractive alternative to traveling by rail.

Airlines offer a faster long haul alternative to railway passenger travel, with service intentionally emphasized. With the advent of the jet cargo plane in a matter of years, perhaps sooner, some of the long haul, high-revenue freight traffic of the railroads will be further challenged.

There is nothing to indicate that the growth and progress of formidable competitors to the railroads is going to diminish; I think the opposite is true.

Since this change in American transportation already has had serious effects upon railroad employment, the membership of the rail unions is justly concerned about the future.

I would like to suggest today some of the ways in which that concern might be translated into more effective action than has been evident in the past.

The question before all of us who are interested in a sound railroad industry and a sound transportation system is how we can derive the maximum good from change—that good being a stable, unified transportation system with efficient components that offer both employment stability and competitive advantage, with a minimum of cost to the individual citizen and his family, and to the communities in which those families live.

It should conserve and use the vast investment already made in the lifetime training and experience of its employees, of the many billions of dollars in plant and equipment.

How do we get such a system?

More to the point here: how do the people of American railroading help the industry to hold position?

It makes good sense to me to begin the answer by confronting the difficult truths of change—to start with the premise that if a competitive position is the basic need of today's railroads then it is to the interest of everyone who looks to the railroads to contribute to the finding and holding of such a position.

An acceptance of this first of facts might lead railroad labor and railroad management to the acceptance of new postures; where the rail unions have been in the past an articulate opposition to changes that endanger the welfare of their membership, there may now exist the need for them to join with management to present an equally articulate opposition to whatever endangers the competitive position of their industry. Management might join with the unions to formulate recommendations toward a public transportation policy more in keeping with the realities of 1960 and not so reflective of the vanished realities of 1920.

I do not think that a competitive position for railroads can be achieved if the collective-bargaining table continues to be the only instrument for communication between rail unions and rail management.

This may seem an awkward time to suggest such a thing; actually there is no better time. The railroad unions of America have represented their memberships before management with great credit and success. Rail management, faced with the difficulties of competition, has faced many volatile decisions; the record of a century of service has been a good one.

But now both must realize that the field has widened, that the railroad industry finds itself one part of a competitive transportation system that seeks to obliterate the inefficient and unattractive. If labor and management face the need for new and progressive positions in such a changing world, they face that need together.

To the question of Government regulation, for example, the railroad industry might, and I think should have, a single, strong answer—an industry answer, not one labor and one management answer.

The present structure of Government regulation is based upon a time in economic history when the rails had, in effect, a monopoly in transportation. By protecting the public welfare in the regulation of railroads, the Government protected the public interest in the only mode of transportation that mattered.

As the rails are no longer a monopoly, so the regulations that govern them must be accommodated to the new competition. An overall approach on the part of the Federal Government to transportation is an essential. We need a fresh approach to economic policies, regulation, subsidies, and taxation. And, certainly for the railroad industry, no one is in a better position to suggest the right changes than the men and women of the railroad industry, both those who work and those who manage.

I suggest that a fundamental overhauling of the Interstate Commerce Commission and the laws that govern transportation is necessary so that Federal regulation produces equality of competition and not an index to the competition of yesterday. A joint recommendation on this subject from labor and management would go a long way toward achieving that end. If a joint recommendation is not possible, certainly separate recommendations would be in order.

And what of Government subsidies?

The Government subsidizes the building of ships and the losses of American-flag lines. It deepens and develops inland waterways. It subsidizes airlines through the construction of terminals and the carrying of mail. It has subsidized truckers through building public roads. The railroads remain the great unsubsidized portion of the American transportation system.

I suggest that we seek the gradual elimination of all Government subsidies in transportation in America and consider the introduction of user charges so that each mode of transportation carries its fair share of the burden of public expenditures from which they now profit unequally.

A joint recommendation from labor and management in the railroad industry would go far toward achieving this end also; and again, separate recommendations, in the event a joint one is not possible, would most certainly be in order.

Now, the development of these kinds of recommendations, offered on behalf of the entire industry, is an entirely different objective than that of collective bargaining, and it requires a different kind of labor-management approach.

I believe that the railroad industry position on matters like Government regulation and subsidies and user charges would be a strong one, and would contribute to an improved competitive posture for railroads, if it represented the best joint thinking of both labor and management, if it were a total industry position.

Certainly the health of the industry is a matter for common concern, and as the industry benefits from a better situation so do all of the people within it.

Certainly economic change does not wait; lack of flexibility means lost jobs and a continuously deteriorating position.

No one in the railroad industry can afford to have his head stuck in the sands of 30 years ago.

It doesn't mean much to win a collective bargaining battle and lose the whole competitive war.

Collective bargaining "business as usual"—without a real effort to join outside the bargaining table and develop competitive measures—could mean no business at all.

We have big markets in America; we are going to have bigger ones. The railroads' share of them will determine whether or not jobs will continue to be lost, or won back—and that share depends upon the extent to which labor and management can develop a cooperative method for finding a better competitive posture.

One of the things we face in this country is a growing urban-suburban transportation problem which is going to get worse before it gets better. A few years from now the entire eastern seaboard from Richmond to Boston will be, in terms of transportation need, virtually a single urbanized area with metro-

politan centers at intervals. I would think that here would be an area where the railroads, with their rights of way, their terminals in the centers of the metropolitan areas, their established links between suburb and city, could step forward with a comprehensive transportation plan that takes account of their advantages.

If, before such a plan could become operative, Government regulations at several levels needed to be cleared away, then why shouldn't rail labor and rail management offer a recommendation to accomplish that?

At an even more immediate level, there are questions of attractive service, of adequate equipment and of productivity that can snarl up a bargaining table while railroad competitors keep moving ahead—but the answer is not in referring these questions to bargaining but to a different kind of meeting, one in which the leaders of rail labor and the officials of rail management come without the need for combatting each other but with the need for cooperating with each other.

And that need grows with the economy.

The railroad industry has benefited for many years from the provisions of the Railway Labor Act. It has been a good law, and is still a good law for dealing with subjects that can be settled by legal machinery. But it involves deadlines; it involves procedures that move in a regular and orderly sequence toward decision. I wonder how far a piece of legal machinery, no matter how trustworthy for other purposes, should be trusted to resolve questions in which not only the competitive posture of an entire industry but the lives and jobs of many thousands of people are involved?

It seems to me that is letting the law manage men; I think we would all prefer to see men manage themselves.

The single question of work rules and practices that were practical in their day but that might now be obsolete cannot be approached without the most careful consideration and deliberate study—a consideration and study that cannot take place under the gun of a deadline.

It takes a long time and a lot of patient effort to solve any problem in which the welfare of human beings is involved; I would be hesitant about referring that kind of problem to a process that is going to click right along toward what has to be a comparatively immediate solution.

Labor and management in the railroad industry might think about this as they consider how to meet their problem of change, and as they contemplate a mechanism to assure themselves, and the public, that their relationship will be fruitful.

I would like to suggest four ground rules within which collective bargaining and additional cooperative discussion between labor and management in the railroads might take place—a discussion designed to formulate a total transportation policy for the entire industry as it stands in competition with other modes of transportation, a discussion from which might come recommendations on Government regulation and subsidies, and a discussion from which might come understanding and agreement on specific industry problems like adequate equipment, improved services and higher productivity.

The first of these ground rules is that compulsion of an involuntary nature is not a solution to railroad problems. Compulsory arbitration can solve none of the problems I have implied; it can only create new ones.

Secondly, working men and women have something akin to a property right in work procedures and customs engaged in for many years and resulting from bargaining agreements, and these rights should be modified or forfeited by consent, not compulsion.

Thirdly, management, cannot manage or exist without the ability to maneuver flexibility to meet competitive challenges. The status quo is not an answer to the challenge of change; standing pat is often an optical illusion for going backward.

Finally, both labor and management bear a public responsibility that will make itself felt, sooner or later.

The rejection of compulsion, the rejection of forced change, the rejection of standpatism, and the acceptance of the crucial impact of public responsibility—within these four ground rules, it seems to me, rail labor and rail management can fruitfully explore the problems, some of which now divide them, with the objective of creating a common understandnig and a joint policy to keep the American railroad industry in a competitive position, break new ground for it, protect employment, and produce the one thing that will make the difference: the best service for the best price.

Thank you.

Politics Is for People

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. BROOMFIELD. Mr. Speaker, an editorial which appeared in a recent issue of the Republican Delta of Buckhannon, W. Va., came to my attention today, and I would recommend it to my colleagues for their consideration.

Mr. Romney, president of American Motors, points out that politics and government are personal responsibilities, not group responsibilities, and he has outlined some steps which should be taken to return our political parties and our Government to those they are supposed to represent.

Following is the editorial:

POLITICS IS FOR PEOPLE

With the tempo of election year politics increasing everywhere, some thoughts of George Romney, American Motors president, in the May Reader's Digest are timely and important. In an address titled "Politics Is for People—Not the 'Bigs'," he urges that we take part personally and not leave our fate to other people or interests.

Romney is interested in individual action. As explained in his biography, "The Story of George Romney," recently published by Harper's, the automobile executive is opposed to excessive concentration of power in business, labor, or government.

"I believe," says Romney in the Digest, "that corporate officials and union officials should participate in political affairs—but personally, as individuals. They should take every possible step to assure members and employees that this is a personal right not to be abridged in any manner.

"Each individual must speak for himself, directed by what he believes in. Of course, to be effective he must combine his energies with the energies of others, but through the instrument of a political party, not through his corporation or his union."

To stop the drift toward increasingly massive centralized government, Romney has three suggestions:

1. Make certain, by modernized law, that power outside government is dispersed and kept dispersed, so that big government is not needed to hold it in check.

2. Improve the character of State governments and modernize the smaller government units, such as the parish or the county.

3. Revive the feeling that people can participate effectively in control of the government.

"We need to bring our political parties and the people together," says Romney, "if our democratic system is to continue to be truly representative."

As a step in this direction he suggests that we give an hour as well as a dollar to the party of our choice. He also has several other proposals, all worth reading, study, and action.

Brooklyn's New Caledonian Hospital

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a brief article on the Caledonian Hospital in Brooklyn, a $2 million project which is now nearing completion. It was planned and built by Mr. Bernard E. Feuerstein, an architect who studied the needs of doctors, nurses, and patients. The result is a hospital of modern and original designs with an eye for practicability.

Brooklyn is very proud of its new Caledonian Hospital. In view of hospital shortages in various parts of the country, this brief article may prove to be of significance and food for thought in planning such structures. The article was published in the New York Journal American on March 15, 1960, and reads as follows:

TURNS SURGEON TO BUILD HOSPITAL

A Long Island master builder with a design for doing things right turned surgeon before he undertook the planning and construction of Brooklyn's Caledonian Hospital and Hempstead General Hospital.

Bernard E. Feuerstein, who heads the firm of Bernard Associates, East Rockaway, is now putting the finishing touches on the $2 million construction project at Caledonian Hospital.

But prior to starting on these jobs, Mr. Feuerstein attended several surgical operations, though he hates the sight of blood. He also spoke to hundreds of department heads, administrators, patients, professional and nonprofessional staff at over a dozen hospitals.

His purpose was to determine the hospital needs from those on the firing line.

Mr. Feuerstein said that by attending operations he could see the needs of the doctors and nurses, inefficiencies of existing operating room facilities, and how he could improve on them.

He also examined the operations behind the lines, in such areas as kitchen, laundry and laboratories, and studied hospitals' unique problems.

Because rapid attention is necessary for patients, with free flow of traffic, Mr. Feuerstein traced the visit of patients from the time they were admitted to their discharge, so that a maximum of attention and minimum of wasted motion could be incorporated into the hospital plans.

Donald G. C. Sinclair, president of Caledonian Hospital, praised Mr. Feuerstein for his work.

Mr. Feuerstein, who received his architectural training at New York University, said his extensive study visits to city hospitals are now paying off for the institutions. They are able to cut administrative and operative costs, and can save considerable funds in the original design by slashing waste.

And, he said, employees and doctors like the hospitals better too. They helped design them.

Home for Smokey

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. METCALF. Mr. Speaker, that this Nation's No. 1 forest firefighter, who has saved the homes of thousands of people, is homeless himself, was the subject of of an article in the Sunday Star of April 24, 1960.

Smokey the Bear, symbol of the Forest Service's successful campaign against man-caused forest fires, spends his days in a temporary cage at the National Zoological Park here, because there is no money to build the home the Forest Service had planned for him, according to the North American Newspaper Alliance.

In an account labeled "Home for Smokey," the Department of Agriculture has about $2,000 in contributions from Junior Rangers and Smokey's young friends around the country. But Director William Huber of the Forest Service's Cooperative Fire Prevention Campaign estimates it will take about $25,000 to get started.

Smokey has been saving millions of dollars and millions of acres from forest fires ever since he was rescued as a cub from a fire in the Lincoln National Forest of New Mexico in 1950. That fire burned 17,000 acres of timber, killed countless animals and burned off the cover which holds the water. The only living thing the mop-up crews saw was a badly burned bear cub. New Mexico State game and fish officials took him back to Santa Fe, treated him for third-degree burns and nursed him back to health on a diet of pablum mixed with honey and milk.

New Mexico's game warden offered the cub to the Forest Service as a living symbol of the need to be careful with fire in the forest. So 3 months after the fire, Smokey, then weighing in at 10 pounds, was flown to Washington.

Since that time, he has become a national figure. The advertising council has built a promotion campaign around Smokey to which businessmen contribute around $10 million worth of time and space a year. The cooperative Federal-State fire prevention program budget is around $200,000.

Smokey also is a major financial contributor to the program. In 1952, because of his popularity and standing with the youngsters of this country, Congress passed a law protecting his name. The Secretary of Agriculture is authorized to issue licenses for the manufacture and sale of commercial Smokey Bear products provided the product is in good taste and carries a forest fire prevention message. All the money from these licenses and a 5-percent royalty goes for furthering the nationwide cooperative forest fire prevention program. To date the royalty has totaled some $200,000.

The campaign has been a success. Some 8 years ago about 200,000 man-caused forest fires burned 30 million acres—an area about the size of New York State. Last year, 100,000 man-caused forest fires burned 4 million acres.

As the author of the following article points out, what this country needs in election year 1960 is a good 5-cent contribution for Smokey the Bear:

FIREFIGHTING SMOKEY BARELY HAS OWN DEN

What this country needs in election year 1960 is a good 5-cent contribution for Smokey the Bear.

Smokey, the Nation's No. 1 forest firefighter for 10 years, is homeless.

And if any candidate for President is reading, there are several junior forest rangers who would like to see some action on housing this year for a special friend of theirs.

For a decade, first under a Democratic administration and now under the Republicans, Smokey has lent his name and his familiar face to the most successful fire-prevention campaign in history.

Smokey gets about 1,000 letters a day, more than Senators, Representatives, and Governors, and just about as many as the President.

But all he has received on housing from the politicians and bureaucrats is a string of broken promises.

IN TEMPORARY CAGE

And so he spends his days in a temporary cage at the National Zoological Park here, just another cinnamon bear begging for peanuts; homeless, mateless, cubless.

The Forest Service has a dandy set of plans on the shelf, approved by the zoo and the Smithsonian Institution, to build a separate moated home for Smokey and a mate. It's to be a replica of a forest ranger cabin, with room for little Smokeys to carry on the firefighting tradition.

But the money is scarcer than wild honey.

Somewhere among the billions of dollars handled by the Agriculture Department is an account labeled "Home for Smokey." In it is about $2,000 in pennies, nickels, and dimes contributed by junior rangers and Smokey's young friends around the country.

"But we need about $25,000 to get started," said William Huber, director of the Forest Service's Cooperative Fire Prevention Campaign. "At the rate we're going, Smokey may be gone before we get the money."

Here's where a presidential candidate could step in with a Smokey housing platform, keeping in mind all those junior rangers and their voting parents.

SAVED MILLIONS

Not only is there no tax money to finance Smokey's promised home, but Agriculture Secretary Benson frowns on the idea of the Forest Service soliciting funds for it.

Smokey has been saving millions of dollars and millions of acres from forest fires ever since he was rescued as a frightened cub from a fire in the Lincoln National Forest of New Mexico in 1950.

The symbol of Smokey, leaning on his shovel and wearing a ranger hat, has become a national trademark of the fight against forest fires.

Eight years or so ago, there were about 200,000 man-caused forest fires a year, burning over 30 million acres—an area about the size of New York State. Last year, there were about 100,000 fires caused by man. The toll dropped to 4 million acres.

Each year, the Forest Service sends out 500,000 of Smokey's Junior Ranger kits to schools, youth clubs, and individual Smokey fans.

COST 12 CENTS

The kits include a Junior Ranger badge, membership card, several Smokey stamps, a Smokey photograph, and a letter from Smokey with his song printed on the other side.

"The kits cost us about 12 cents each," said Mr. Huber. "We send them out free, using the money we earn from the royalties on Smokey scarfs, replica bears, and so on. It takes all the royalty money just to finance the kits."

Last month the demand was so great that the Forest Service had to hire an outside firm to help handle Smokey's mail.

Last month also, Congress was asked to provide an air-conditioned kennel for dogs kept by the Public Health Service.

But nobody put in a plug for Smokey, who has grown almost to middle age waiting for people to make good on a promise.

"Can you imagine what a nickel from schoolchildren—or even a penny—would do?" mused Mr. Huber.

Philadelphia Textile Institute

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. TOLL. Mr. Speaker, on Saturday, April 23, 1960, I had the pleasure to attend the 75th anniversary dinner of the Philadelphia Textile Institute, one of the great institutions of learning in my district.

Dr. Richard S. Cox, dean emeritus, was one of the speakers on this pleasant occasion. His review of the history of the institute since its early days, when it did not award degrees, to the present time, when it is one of the largest and most advanced institutions of its kind in the world, was extremely interesting and informative. Therefore, I am including his remarks below:

SEVENTY-FIVE YEARS OF PROGRESS OF THE PHILADELPHIA TEXTILE INSTITUTE

(By Dr. Richard S. Cox, dean emeritus)

Looking back over the years to trace the progress and development of an institution such as the Philadelphia Textile Institute, one cannot help but be dazzled by the evolution of the textile industry in the 75 years of the existence of our college.

The dreams, ambitious and mechanical developments, to say nothing of the advent of new fibers to augment the natural fibers of linen, cotton, wool, and silk; all have had the attention of those who had the growth of the American textile industry ever in their minds.

The Philadelphia Textile Institute was founded 75 years ago, because prior to that time there were no textile education facilities in America, European manufacturers aided by their specialized colleges and schools were capturing the international textile market.

Mr. Theodore C. Search, one of the leaders in the group of founders of the college has often been quoted as saying, "If the

United States hopes to maintain the best markets for its textile products, their products must combine the highest skill in manufacturing and the best taste in design."

With these thoughts in mind the textile school was founded and opened in 1884, by a group of Philadelphia textile manufacturers, two of whom are still active, one being represented on the Philadelphia Textile Institute Foundation Board, namely, Dehaven Butterworth, a direct descendent of one of our founders, H. W. Butterworth & Sons.

This group of manufacturers after founding the textile school, founded the Manufacturers Club, which for years was a leading Philadelphia club, located at Broad and Walnut Streets.

Originally, classes both day and evening, were conducted at 1336 Spring Garden Street with the thought of training young men in perfecting their skill in operating the loom and preparing the patterns. In this, the machines were studied so that various patterns could be produced with the study of the timing and setting of the loom.

In 1887 a department of chemistry was added to the curriculum, because the use of chemicals in dyeing and finishing of the fabric attracted the attention of the industry and knowledge of these factors became a necessity.

The move from Spring Garden Street to Broad and Pine Streets in 1892 was the stepping stone for greater advancement and broadening of our teaching and facilities.

Dr. J. Merritt Matthews was added to the staff to head the department of chemistry and dyeing, which had grown by the addition of much needed space in our new quarters.

Dr. Matthews was a chemist of renown who had devoted much of his time to textiles, particularly the new fibers which were beginning to be developed. His book on "Textile Fibers" was the first publication of its kind in the United States and for many years remained a recognized authority on the many natural and manmade fibers. After his death a revised edition had on its board of editors, several members of the school faculty.

Further expansion was made by creating a woolen department fully equipped with processing machinery and later a cotton department for the manipulation of the cotton fiber.

A book on "Cotton Spinning" was published, written by William E. Winchester, a PTI instructor in cotton processing, who in later years became a member of the firm of Deering-Milliken Co.

Raw wool fibers were studied and a book on "Wool" was published, written by Stanley H. Hart, also a PTI instructor who in later years became a member of the board of governors of the school.

The courses in fabric construction, were expanded and figured design and color were added which grew to a full department with stress being made on the production of fabrics designed by the students using yarns dyed by them for their individual fabrics.

Changes were constantly being made in instruction, with the primary purpose of elevating the general thoroughness of the education of the student, looking forward to the time when full collegiate requirements could be met and the standing of the graduate elevated.

A step in this direction was made with the aid of faculty members of the Wharton School of the University of Pennsylvania, in the early days of the 20th century, who gave lecture courses to the seniors on "Cost Accounting in Textile Mills" and "Textile Economics."

As the textile industry developed in America, the young men educated in textile schools were required to do more than just learn how to make a fabric, they were concerned with the management of the larger mills that had grown up in the first 40 years of our existence and also in the marketing of their products, hence, courses in management and marketing were developed and included in the curriculum.

With the addition of courses in psychology, English, literature, mathematics, physics, and other humanities, we were in a position to satisfy the requirements for the granting of degrees and in 1941 the Pennsylvania State Council of Education gave the institution authority to grant the degree of bachelor of science to graduates who satisfactorily completed the requirements of the prescribed 4-year course of study.

We were now a college in fact, no longer looked on mistakenly as a trade school, which had been the case in some instances, due to lack of familiarization with our work and the necessity of offering courses to prepare the graduate to satisfy what was demanded by the industry to produce fabrics of all kinds of raw materials in colors that would surpass even a rainbow.

With the granting of degrees the name was changed to the Philadelphia Textile Institute at the suggestion of the Pennsylvania State Council of Education.

Other schools and colleges teaching textiles followed the example of Philadelphia, and over the years, were established in the North and South. They, being State schools or part of State colleges, while PTI remained the only private self-governed college of its type.

Dating back to the founding of the school, as it was known in 1884, it was under the jurisdiction of the Pennsylvania Museum of Art, now the Philadelphia Museum of Art, which had the school of industrial art, now Philadelphia Museum College of Art, under its control, making an organization for the advancement of culture in the arts.

Growing pains and the desire to advance to greater usefulness, led to the formation of the Philadelphia Textile Institute Foundation which was incorporated and chartered in 1944, for the purpose of aiding and developing the Philadelphia Textile Institute. Among its aims was the purchase of a new site for the college with appropriate modern buildings, as well as separation from the museum of art with the granting of a separate charter.

All of this was carried out with the generous help of industry and friends resulting in the present campus purchase and the laboratory and classroom building erection; both of which were turned over to the new corporation upon the granting of the charter in 1949.

In October 1949 classes were opened at our present site all the equipment having been installed during the summer after the commencement in June 1949.

Since that time, the college has become a member of and accredited by the Middle States Association of Colleges and Secondary Schools. And also, fully accredited by the Pennsylvanial State Council of Education, marking the achievement of two major educational goals.

During World War I, a very serious problem arose in the colleges. The U.S. Government set up a training program for college students. We at the Philadelphia Textile Institute had our entire student body enlist in the student Army Training Corps, and as enlisted men attend classes each day in uniform, transporting them from their quarters to school each day by motor truck.

With the ending of the war, classes were continued with the entire corps registering to complete their courses.

Following the war the Armed Forces sent officers for training and it was not uncommon to find in the hall of PTI colonels, majors, captains, and lieutenants sent by the Quartermaster Corps and Navy to take advantage of this opportunity.

World War II found many PTI trained men in key positions in purchasing, testing, and research in the Army, Navy, and Marine Corps, having much to do with the changes required in clothing and equipment occasioned by placing of troops in diversified climatic areas.

Research at the Institute was conducted not only for the Armed Forces but also War Production Board which has continued to this day, resulting in many new fabrics being developed, introducing new blends of manmade fibers with the natural fibers.

Research has become an integral part of our activities and a research department with special equipment for testing and fabric development, especially with new fibers, some as yet, not even on the market, has proven of great value to the industry. An example of its activities include the artificial arteries recently developed in conjunction with our knitting department.

Student tours for graduating classes during the week immediately following commencement, were conducted for 15 years. These tours made it possible for major companies to become acquainted with the young men about to persue careers in the advancing and broadening textile industry.

Seminars for executives were held for a week at Hershey and Shawnee on the Delaware, bringing problems of great interest to those who were leaders in the broad field of textiles.

All of these activities called for expansion in our curriculum and courses in knitting and sciences became a necessity, making our old quarters at Broad and Pine completely inadequate.

Our growth from 1949 on our present campus has been one of continued progress.

The Hesslein Library, housing the best collection of books on textiles and general topics is looked upon as one of the finest in America, if not the world.

Scholler Hall, a residence hall gives students home conveniences in the finest atmosphere.

Althouse Hall, dedicated today, which when completely furnished and equipped will give to our campus, complete facilities for a broad curriculum to meet present day requirements for young men who wish to become useful citizens and possess specific knowledge which industry demands, is the most recent addition.

The credit for the development of this great college belongs to many people, both in and out of the textile industry. P.T.I. with a great heritage is fast approaching a period in its history incomparable with any that has passed. With the sincerity of purpose and the stick-to-itiveness of its present leaders, that has so characterized its past, its destiny must be a success.

Iowa Poll of Farm Opinion

EXTENSION OF REMARKS

OF

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include an editorial which appeared in the April 24, 1960, edition of the Des Moines Sunday Register. This editorial concerns itself with the results of the latest survey by the Iowa poll on farm opinion on the control of surplus gain. As the poll points out, a large majority of Iowa

farm people interviewed believe the grain surplus problem requires Federal Government action. In my opinion, this poll lends strong support for early consideration of farm legislation.

The editorial follows:

IOWA FARM POLICY VIEWS

The Iowa poll survey of farm opinion printed in the columns to the right shows that most Iowa farm people think the Federal Government should act to limit grain acreage.

A small segment of farm people (about 12 percent) believe the Government should set production quotas in bushels in order to check the oversupply of grains.

Farm women seem more ready to turn to production control than their menfolk. Only 9.4 percent of them want to abandon Government control and let the free market take care of the problem. But 25.6 percent of the men favor the free market approach.

Also, 20.3 percent of the women want definite production control by quotas, as against only 4.9 percent of the men.

Both sides of the production control argument can make something of this split in opinion between the men and women. The opponents of production control can say that the women are not so well informed—28.1 percent of them had no opinion on the question. They can say that the high percentage of women in favor of crop controls reflects ignorance. (They had better say this out behind the barn, though.)

But the supporters of control can say that women are more practical than men and less ruled by vague theory and ideology. Women are more conscious of the dwindling family income and see the need for money for the children's education and things for the home. They are willing to accept some regimentation in return for more income security.

One thing is plain: Iowa farm people believe acreage allotments for corn—or a greatly expanded soil bank—would be advisable. In this survey people were given only one choice of the six listed, so there is no way to tell how many might select two or more methods of restraining output of grain. For example, some farmers might favor both corn allotments and a larger soil bank.

The answers to the question about price-support methods show that a majority of those stating an opinion prefer the traditional "percentage of parity" method. Since the Farm Bureau is the dominant farm organization in Iowa, and since its present policy is for the 3-year market average price-support system, this poll may indicate a change in opinion that could result in a change in Farm Bureau policy.

If price supports were based on a percentage of the previous 3 years' market prices, the supports would gradually sink until the market level were reached. Thus this method would put a brake on market price declines, but would not provide any support over a period of years.

Not many Iowa farm people are willing to turn over the price-support setting to an independent Government board—they prefer some kind of a legal formula which administrators must follow.

Perhaps the most surprising result of this survey is the high percentage of farm people who think the National Farmer's Organization policies are best. NFO is a relatively new organization, about 5 years old, but it did very well in this competition with the older farm pressure groups. Farm co-op policies also appeal to a relatively large group.

The breakdown of the answers by size of farm shows that the people on the larger farms are more inclined to vote for crop control (strict cross compliance), grain quotas and parity price supports.

A smaller percentage of them believe the free market can handle the problem.

This result is surprising. We would have expected more of the larger, commercial farmers, practically all of whom belong to the Farm Bureau, to favor its policies of no corn allotments and lower price supports. We would have expected more of the smaller farmers to be in favor of Government help.

HOW FARMERS WOULD CONTROL SURPLUS

A large majority of Iowa farm people interviewed recently by the Iowa poll believe the grain surplus problem requires Federal Government action.

Sixty-four percent said they favored crop acreage allotments, a larger soil bank, production control with bushel quotas. Only 18.5 percent said they thought Government programs should be abandoned, leaving the free market to handle the adjustment.

About 23 percent of those interviewed said the soil bank program should be expanded and that participation should be required as a condition for obtaining crop loans. But nearly 29 percent favor a return to corn acreage allotments, which were dropped in 1959.

When asked what method of price support they preferred, 44 percent approved traditional supports based on percentage of parity. This was nearly twice as many as the number who favored price supports based on the average of market prices for the previous 3 years.

Farm people were then asked which organization's policies they thought were best for agriculture. By far the largest group said they believed the Farm Bureau's policies were best. But large percentages said they preferred the policies of the National Farmers Organization and of farm cooperative groups.

A selected representative sample of Iowa farm people was asked the multiple choice questions shown here. The tables give the percentages for each choice—in total, by men and women and by those living on farms larger than 180 acres and smaller than that size. The questions and results follow:

[In percent]

	Total	Men	Women	Under 180 acres	Over 180 acres
Grain surpluses are piling up to higher and higher levels. Which one of these Government policies do you favor as a way of solving this problem?					
1. Abandon Government price supports and crop controls and let the free market take care of it	18.5	25.6	9.4	22.1	15.4
2. Continue price supports, return to crop acreage allotments for corn and continue the present allotments for wheat	10.3	6.1	15.6	14.7	6.4
3. The same plan as (2) plus strict cross compliance to prevent substitution of other crops on land taken out of wheat and corn	18.5	25.6	9.4	13.2	23.1
4. Voluntary land retirement (soil bank) on much larger scale, with participation required for those who get crop loans	23.3	28.0	17.2	19.1	26.9
5. Production control by means of bushel quotas on grain, with higher price supports	11.6	4.9	20.3	5.9	16.7
6. No opinion	17.8	9.8	28.1	25.0	11.5
As to farm price supports, which of these methods do you favor?					
1. Price support loans based on percentage of average of market prices for previous 3 years (gradual decline of price supports until free market level is reached)	23.8	31.3	14.3	26.9	21.1
2. Price supports based on percentage of parity	44.0	46.3	41.3	37.3	50.0
3. Price support loans determined without regard to any formula, by an independent Government Price Stabilization Board	7.7	8.7	6.3	3.0	11.8
4. No opinion	24.5	13.7	38.1	32.8	17.1
Which one of these farm organizations stands for policies that you think are best for agriculture at this time?					
1. Farm Bureau	37.2	40.2	33.3	35.8	38.5
2. Farmers Union	6.9	9.8	3.2	7.5	6.4
3. Grange	3.5	6.1	.0	6.0	.3
4. National Farmers Organization	19.3	20.7	17.5	14.9	23.1
5. Commodity groups	4.8	6.1	3.2	4.5	5.1
6. Farmer's cooperative groups	15.9	11.0	22.2	13.4	17.9
7. No opinion	12.4	6.1	20.6	17.9	7.7

Resolution of the Norwich, Conn., City Council Favoring Increase in the Federal Minimum Wage

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. BOWLES. Mr. Speaker, the City Council of Norwich, Conn., on April 4, adopted a strong resolution in favor of increasing the Federal minimum wage to $1.25 per hour. Under permission to revise and extend my remarks, I call to my colleagues' attention the resolution as follows:

RESOLUTION CALLING UPON THE 86TH CONGRESS TO ENACT S. 1046 AND H.R. 4488

Whereas the present Federal minimum wage of $1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure, and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Norwich, Conn.; and

Whereas there is now before Congress a bill (S. 1046 and H.R. 4488) which would greatly ameliorate this problem by raising the Federal minimum wage to $1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Now, therefore, be it

Resolved, by the City Council of Norwich, Conn., That we call upon the Congress of the United States to give prompt and favorable consideration to S. 1046 and H.R. 4488, so that the conditions above described can be corrected; and, be it further

Resolved, That copies of this resolution be sent to the U.S. Senators from Connecticut and to the Congressman from the Second Congressional District.

Dated at Norwich, Conn., this 6th day of April A.D., 1960.
Attest:

J. DYER POTTER,
City Clerk.

Residual Fuel Oil

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. SAYLOR. Mr. Speaker, now would seem the appropriate time for Members of Congress to advise those responsible for the oil import control program that we are not satisfied with the elevator operation to which the Nation has been exposed since the program took effect last year.

I need not remind Congress that mandatory controls were effectuated by the President because of the failure of the oil shippers to adhere to requirements of the so-called voluntary control program. The latter plan was a consequence of a study and recommendation by a Cabinet committee concerned with the debilitation of domestic fuel industries by excessive oil imports. The recommendation was implemented by Congress through the national defense amendment to the bill extending the Reciprocal Trade Agreements Act.

There were doubts, Mr. Speaker, about the effectiveness of the voluntary program. Some of us were not convinced that it would work. Eventually the administration and Senate leaders agreed that this means of safeguarding the strength of domestic fuel industries was acceptable and had to be made workable.

The failure of the voluntary program is now a matter of record, and the mandatory program will also go into the books as a complete failure unless established rules are enforced beginning no later than July 1 of this year. The reasons are obvious.

International oil companies cannot be left to their own devices. It was only a short time after the President signed the trade agreements bill in 1958 that importers began to flood the country with foreign residual oil. The 1954 levels, as recommended by the Cabinet Committee and translated into the Trade Agreements Act, were immediately ignored. The final residual oil import figures for 1958 were 182 million barrels, with the surge increasing in the early months of 1959.

It was this disregard of the voluntary program that prompted President Eisenhower to proclaim the mandatory program—based on 1957 levels—effective April 1, 1959. For a short time it appeared that shippers would respect the official allocation levels, but their avaricious tendencies became apparent long before the end of 1959. The year's totals—from January 1 through December 31—amounted to 223 million barrels, or 50 million barrels in excess of the 1957 levels. Unfortunately, the Department of Interior, caught in this swirl of foreign residual oil, agreed to a 17-percent increase in allocations for the first half of 1960. Even this generous concession was not satisfactory to the importers, however, and with the advent of the new year, shipments of residual oil immediately began to spiral upward once again. In the last week of January the daily average went to 946,000 barrels in contrast to the new allotment of 425,000 barrels. Within a short time almost all of the allowable volume had moved into this country, leaving the shipping companies to plead for another raise in controls to prevent a cutoff in the last 2 months of the January-June picture.

I do not excuse the Department of Interior for acceeding to the greedy demands of the international oil peddlers; their diabolical scheme should have been recognized when shipments jumped sharply in the early weeks of the year. Inasmuch as the control program had been in operation for a comparatively short time, however, the Interior Department may be partially excused on the grounds that it had no previous experience in administering such a program. No such excuses will be acceptable to the Congress in the months and years to follow.

To suggest that incoming shipments should be restricted to a day-to-day or week-to-week, or even month-to-month allotment would be impractical.

Secretary Seaton's announcement that a 3-month allocation period would be substituted for the half-year schedules would seem to be a logical development. I believe that, in this way, imports can be controlled effectively.

What I now want to learn is exactly how much oil is to be admitted during the first 3 months of this new experimentation. I suggest that it would be in defiance of congressional intent to set import levels in excess of the 1957 record. Of equal importance is the plan of enforcement. The Interior Department will be in default if it fails to accompany its schedule publication with a qualified warning that any breach of the allocations will not be tolerated. If the Secretary feels that a provision for penalizing violators should be written into law, I am confident that Congress will recognize his request. Certainly there is no disputing the implied will of Congress in its enactment of the national defense amendment. Members of the Senate were given unequivocal insurance that oil import levels would be set on the 1954 statistical tables.

Mr. Spcaker, today I am arranging for a delegation from the House, representing affected States, to visit with officials of the Department of Interior responsible for setting up and administering the oil control program. I invite colleagues concerned with the recent departure from a previously announced course of action in the oil control program to accompany me to this conference.

The national defense amendment was created to provide protection for domestic industries that would be required to carry the energy load in an emergency. Unless the spirit of this act is carried out, further destruction of America's coal- and oil-producing industries is inevitable. The volume of imports admitted in 1959 over the 1957 limit was equivalent in energy value to 12 million tons of bituminous coal. There is no doubt that the coal mines of Pennsylvania, West Virginia, and Virginia would have participated in business approximating this tonnage had not the importers chosen to ignore the standards set by the U.S. Government. We are in a bad way when international traders are permitted this latitude. To submit to their arrogance is unprincipled; it is shameful; it is odious.

I ask my colleagues to join me in a meeting with the Department of Interior so that we may state in unqualified terms the wishes and expectations of the legislative branch of this Government.

De Gaulle and the Summit Conference—II

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. COHELAN. Mr. Speaker, in the second of two articles by Columnist Walter Lippmann which I submit for the RECORD today (the first appears elsewhere as a separate insertion), Mr. Lippmann further develops his view of recent developments as the summit conference approaches. The challenging conclusion of this second article is that Premier Khrushchev may now be thinking of the advantages if Berlin remains divided and that we may be able to keep the status quo in Germany with wit and ingenuity—a somewhat different view than that of those who look to the summit for new progress toward reunification of Germany. This article is from the April 19 edition of the Washington Post:

TODAY AND TOMORROW—THE UNAVOWED UNDERSTANDING

(By Walter Lippmann)

The omens are now more favorable that at the summit meeting in May there will be no serious crisis over the German question, no irreconcilable conflict between the Russians and ourselves, no real quarrel between the British and the West Germans. The prospects are that there will be much talk but no negotiation about the German question and there is a fair prospect of an interim working arrangement about West Berlin.

Something, it would seem, has happened to change the climate. The public thing that has happened is that Mr. Khrushchev has been to Paris, has had talks with General de Gaulle, and that while nothing concrete was agreed upon, Mr. Khrushchev went home in a good humor. As we know that General de Gaulle is a hard and resolute man who gives away nothing he thinks he wants to keep, and as Mr. Khrushchev is a tough and persistent man, why is it that the confrontation of these two men

has been followed by such an improvement in the atmosphere?

My guess is that on the German question there is now, as between France and the Soviet Union a basic parallelism—and that it is most likely that Mr. K. has now at last realized it. He has realized too, we may assume, that on the German question General de Gaulle is in a position to speak for the West. The basis of this parallelism of policy is that in neither camp is there any serious intention of proceeding toward the reunification of Germany.

On both sides there is a fear of the power of a reunited Germany. This is the basic understanding which, while it cannot now be publicly avowed by either side, makes it likely that there will be no collision at the summit.

Both sides realize that in the long run German nationalism will not accept gladly the present dismemberment. But for the short run which may be at least a few more years, the partition is acceptable, indeed unavoidable as long as the occupying powers are determined not to risk a war over the German question.

The Germans are not strong enough to unify themselves and the United States has no intention whatever of going to war in order to unify them. On the other hand, a deal between West Germany and the Soviet Union at the expense of Poland and the West, though a theoretical possibility, would now be enormously and intolerably dangerous.

Though there is no agreement between the West and the East, a decision has in fact been taken to keep Germany divided. On both sides, the decision is masked by official formulas. On the Soviet side the formula is to say that East and West Germany are free to work out their own reunion. On the Western side the real decision is masked by the repetition of the demand that the two Germanys should be reunited by a free election.

Beneath these formulas, which are really fictions used for propaganda and for the sake of appearances, the reality is something like this. The Soviet Union means to raise the standard of life in East Germany to a level where East Germany can stand comparison with West Germany. Moscow believes that this will greatly reduce German popular pressure for reunification.

The West, with France as its leader in this matter, is determined to give the West Germans prosperity in the Common Market and status in NATO; it is determined to give the West Germans everything they want except the reunification of their country.

Mr. K. would like to imprison and isolate the West Germans. The French intend to elect them to their clubs, and to bind them by self-interest against the lures and the snares of reunification.

Seen from Europe, there are now five Germanys—West Germany, East Germany, West Berlin, the lands beyond the Oder-Neisse which are annexed by Poland, and Austria. Only once in modern times have all these been united under one government, and that was under Hitler from 1938 to 1945. Only from 1870 to 1945 were the Germans minus Austria united under one government in Berlin. So, seen from Europe, the division of the Germans, which has resulted from the dismemberment of Hitler's empire, is more normal than is their union.

The Western allies are firmly and unanimously agreed in insisting upon the separateness of Austria. They are for all practical purposes unanimous in regarding the lands beyond the Oder-Neisse as permanently lost to Poland. When we speak of reunification, we mean the reunification of East and West Germany with its capital in a reunited Berlin. Though we all speak of it more or less, the fact is that France does not want the reunification. Britain does not want it. While we have some yearnings for it, we accept the partition. And Adenauer's Germany opposes the partition in principle but is quite willing to live with it in fact.

All this narrows the German question down to the question of West Berlin. For on the future of the various Germanys there is a working understanding between East and West.

There is some reason to think that the new flexibility, which the Russians have hinted at recently, may be due to their having had some second thoughts about Berlin. It was easy to say that the Allied occupation of Western Berlin must end. But what if the impossible happened, what if the allies did in fact surrender West Berlin to Eastern Germany, what would happen if Berlin became the biggest city in Eastern Germany?

For West Berlin would have to be united with East Berlin, and the result would be a quarrelsome city of 3½ million people as the capital of a country of about 18 million. The Berliners are a lively lot, and in trying to swallow them, the East German state might well be biting off more than it could chew.

We do not know this, but it is not at all improbable that Mr. K. may be thinking it would be safer if Berlin remains divided, and if West Berlin is insulated from Communist Germany.

Thus, it may well be that a working arrangement, which leaves intact the substance of Western rights, is possible if we can bring to the negotiation sufficient resourcefulness and ingenuity.

A Man's Religion

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Carolina Israelite of March-April, 1960:

A MAN'S RELIGION

Last November 25, the Roman Catholic bishops of the United States jointly condemned the proposal that would set up an agency to administer American funds to aid undeveloped countries in lowering their too-high birth rates. Thereby the Catholic Church involved itself in what soon became a political issue, since Senator JACK KENNEDY had decided to run for President.

Newsmen promptly asked Senator KENNEDY how he felt about this problem as a Catholic and as a presidential aspirant. Senator KENNEDY was embarrassed by the horns of a dilemma but he answered that our country ought not advocate that other countries limit their population. Newsmen also interviewed Robert Wagner, devotedly a Catholic and mayor of New York City. Mayor Wagner evaded the implications of their questions by saying that no such problem faced New York City now.

What embarrassed these Roman Catholics who hold public office in America is more or less the question the Episcopal Bishop of California, James A. Pike, asked publicly: Is not policy laid down by the Catholic hierarchy binding on Roman Catholic candidates? And what if this policy is not consonant with American policy?

I imagine most Catholics find meaning in their Catholicism only when they go along with the Catholic hierarchy. But that does not mean I think a Catholic President would not set up an agency to disburse funds and information for birth control measures if the elected representatives of the people voted such an agency into law.

There are many Governors who are personally opposed to the principal of capital punishment. Governor "Pat" Brown of California is an example. Yet these Governors do not upon their election commute the sentences of all the murders. In fact, most of these Governors tolerate executions within their tenure. It is a matter of fact that some of these men have urged the abolition of capital punishment and many legislatures have agreed with them. There are other legislatures which have not.

The argument over the ascension of a Catholic to the Presidency cannot be whether or not his religion will affect his thinking as a public official. Of course it will. A Catholic President will be conditioned by the precepts he learned and respects as a Catholic. But this is not a unique phenomenon with Catholics. It holds true for Protestant Presidents and for any Jewish Presidents who may in some future campaign be elected.

Religion has inspired much of American politics. The Methodists and Baptists put through prohibition, a law which ran counter to America's natural inclinations.

Conversely, when Franklin D. Roosevelt wanted to raise his voice in behalf of Loyalist Spain he was prevented from doing so by Roman Catholic pressure in our country and President Truman had to withdraw his appointment of an ambassador to the Vatican because of Protestant pressures.

Senator KENNEDY will not be the first President with religious scruples. But the country has survived many other men with religious scruples.

In the matter of fundamental checks and balances, the country is sound and no religious group within it omnipotent. Prohibition was repealed, and someday a minister will go to the Vatican.

I remember watching Al Smith, Governor of New York and a punctual Catholic, finger his rosary at a funeral. Smith served four terms as New York's Governor. New York State is a good example of America in miniature. It has 4 million Protestants, 4 million Catholics, 2½ million Jews, and another million who make up an additional 20 religious sects, plus a fair share of agnostics and atheists. Can anyone point to a single act of Governor Smith, or any public expression that he made, that gave offense to any of these millions? Can anyone prove that Governor Smith's religion ever made him derelict in enforcing the will of the elected representatives? On the contrary, there is ample evidence to show that Governor Smith's Catholicism made him a better man and consequently a better Governor.

Resolution of Greater Falls Church Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. BROYHILL. Mr. Speaker, modern technology has completely changed the status of lands once thought to be useless and uninhabitable. Areas that once were considered too far out of the

way to worry about now can be the source of grave danger to us, if in unfriendly hands, or can house important links in the chain of our national defense if in our own hands. Furthermore, scientific advances are constantly increasing the possibility that rich resources hidden in snowy wastes can be tapped economically in the future.

With these things in mind, I would like to call my colleagues attention to a resolution recently passed by the Greater Falls Church Chamber of Commerce, and sent to me:

The Greater Falls Church Chamber of Commerce does urge that the Government of the United States do positively assert and safeguard the claims accruing to the United States of America by virtue of exploration and discovery heretofore made and done in on the Antarctic Continent.

Minimum Wage Law Extensions

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. DENT. Mr. Speaker, without committing the subcommittee or any of its members to any given position on the question of minimum wage law extensions prior to official action by our committee, I want to present the testimony presented by the executive director of our local chamber of commerce, Miss Ginger Joyce.

I do this because it is strictly a localized and personalized view that gives a local chamber's hometown viewpoint.

I present without further comment other than to say that Miss Joyce proved to be a very capable spokesman for the merchants on Main Street in my own hometown of Jeannette, Pa.:

STATEMENT OF GINGER JOYCE SUBMITTED TO THE LABOR STANDARDS SUBCOMMITTEE OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR ON BEHALF OF THE COUNCIL OF STATE CHAMBERS OF COMMERCE APRIL 20, 1960

My name is Ginger Joyce. I am the executive director of the Greater Jeannette (Pa.) Chamber of Commerce. I am pleased and my chamber is proud to be part of this presentation on behalf of the Council of State Chambers of Commerce. And we should be part of it because, as a local chamber, we work very closely with our Pennsylvania State Chamber just as local chambers in all parts of the country do. Also, just as the State chambers do, we local chambers represent a broad cross-section of all sorts and sizes of business.

Gentlemen, I have been authorized by the Greater Jeannette (Pa.) Chamber of Commerce to speak on behalf of that group in pointing out the hardships the extension of coverage and increase in rates of the Fair Labor Standards Act would impose on the people of our city, and other small cities such as ours.

Jeannette, Pa., is a city of 17,000 people with a potential trading area of 75,000. It is located approximately 27 miles east of Pittsburgh and is, therefore, considered a part of the Pittsburgh trading area.

I know you have been listening to a great deal of testimony involving figures and statistics, adding up to a strong collection of reasons why such legislation should not be enacted. I realize that such information is necessary and that repetition is a good thing, as a matter of fact, I firmly believe that these figures and statistics should, and must, be drummed out over and over again, round the clock if necessary, until their message is received by those of you who will make the decisions. However, for a moment, I would like to stop talking about the effects of the proposed legislation in terms of figures and take a look at the effects of this legislation in terms of people and communities. People who have worked hard and taken risks to build a business for themselves and their families, these same people who have spent time, money, and effort to build a better community, people who will lose jobs, people who will not receive the fine service they are entitled to and who will not be given an opportunity to earn extra money to help them through school or to be trained in retailing. So let's take a look at our community, and these people. If you could take a stroll down Clay Avenue, our main business street, with me, I think you might see the problem as we see it.

Jeannette, like many communities, is an old, industrial city, faced with the problems of competing with the large city of Pittsburgh, and the new shopping centers in the surrounding area. It is also faced with the problem of providing opportunities for its young people which will enable them to supplement the family income during school years if necessary, and provide them with a future in the community so they will settle here when they have completed their education.

The problem of saving the downtown is one of national concern. The Federal Government has poured large sums of money into hometown projects for this very purpose and has proposed legislation to increase this type of assistance. In Jeannette, the businessmen, property owners , and the city government, realizing the necessity for modernization of our main business street, have put up the money for a $150,000 program to bring our Clay Avenue up to date. This program is 90 percent complete and will be finished this July. Individual merchants are also modernizing their stores in an effort to revitalize the town. Prior to this modernization, the number of empty stores on Clay Avenue was increasing at an alarming rate. Now, through our own efforts, new businesses are moving in to again fill these store locations. We have provided plenty of parking at reasonable rates and, when the street modernization is completed in July, we will be ready to compete with the shopping centers and Pittsburgh and get our fair share of the business, if we increase our services and keep our prices down. However, as you will see when we visit a few of the business people on Clay Avenue, the proposed legislation will result in decreased service and increased prices.

It is common knowledge that service and price are the main advantages to shopping in a small town and, all other things being equal, these two features will attract business to cities such as ours. However, if these two key factors are removed, as they would be if the proposed legislation is enacted, the money, the time, and the effort we have put forth to put ourselves in a competitive position, will have been wasted.

To demonstrate these facts, let's stop first in a furniture and appliance store on Clay Avenue and see what one of the owners has to say about the effects of the proposed legislation on his business.

This is a modern store, and just a look around tells us that it is a fine, well run business which any community would be proud of. The business was built by the father of the present owners, who started out as a penniless immigrant. Through hard work and careful management, the family now owns three stores in various small cities in our area. At least 95 percent of their employees now make $1.25 or more an hour. This family generously supports all community and charitable projects and is a real asset to the community. Their annual gross sales are over $500,000.

Mr. L is worried about the effect of the inclusion of commissions and bonuses in the computation of the time-and-a-half overtime rate on his salesmen. He is certain that he will have to cut down on the hours worked by these men and alternate which salesmen work on nights of special promotions, to keep them within the 40-hour limit. He pointed out that this will mean that the salesmen who do not work the nights of special promotion, in some instances, will be robbed of the opportunity to make more money in commissions in these few hours than they will the rest of the 40-hour week. For example, Mr. L told me that his salesmen averaged $75 in commissions during a recent evening sale.

Mr. L also has men whom he has been keeping on the payroll at a flat fee, whether they work or not. He calls on these men when he needs them for odd jobs, but whether or not he uses them, they are still paid. As Mr. L points out, there is sentimentality attached to employees by store owners in small towns and this is one example of how he tries to make work and help out some local people. If he must put these people on an hourly basis at $1.25, he will not continue to carry them on the payroll as it will result in the need to increase wages for all of his employees.

So in this furniture and appliance store technical rules for overtime will hurt the salesmen and the customers most of all and a too high minimum would stop a nice man from being kindhearted.

Now let's take a look at the most popular spot in town for lunch. It's a modern confectionery store with a counter, booths, and a small meeting room. Mr. B employs 12 people, three of whom are high school girls who fill in during rush hours. Even now, customers complain because he doesn't pass out the extra cups of coffee free like he used to, but in an effort to hold the line and avoid inflation, he has fought to keep his prices down and hasn't increased even the price of a hamburger in the last 3 years.

Now Mr. B can't cut down too much on his help, although he will have to let the high-school girls go, so naturally, his prices must go up. The officeworkers, bank clerks, and most of the sales clerks in town eat here, so if his prices go up—there goes that increase the clerk got—up goes the cost of a business day for everyone in town; and so, as is inevitable, starts the inflationary spiral. This is the stuff of which inflation is made.

Should Mr. B be exempt from coverage, he still must compete for employees with the businesses which will be covered, and will wind up having to pay the going rate anyway.

Next, let's look at a department store which was built by the grandfather of the present owners. He hoped to leave his heirs a business which would make their lives a little easier than his, but with the already complex records which must be kept—the imposing of the Pennsylvania minimum wage; the increased competition from shopping centers, and the higher cost of doing business generally—his heirs are having to work a lot harder to hang onto the business than their granddad did to build it.

This store which previously employed 15 high-school students for extra work, cut all but 1 of these from the payroll following the enactment of the State minimum wage legislation which is 85 cents in our community, 75 cents in smaller towns and $1 an hour in Pittsburgh and Philadelphia.

Mr. G says that if the Federal legislation is enacted as proposed, the pyramid effect on his other employees wages would necessitate cutting all extra help. He pointed out that he would also cut down on the number of regular employees and those cut would be the older clerks who have been with the store for many years, as his clerks would have to do double duty and he would, therefore, have to retain the employees who are physically fit to take on additional work and responsibility.

Mr. G feels that he will eventually be forced into putting a self-service operation to cut down even further on help.

Now let's take a look at a small ladies' apparel store. This store is privately owned and recently remodeled inside and out. Mr. W has worked for 12 years to build this business. He is fully aware of the competition for capable employees because, even without a high minimum wage rate, he must compete with the largest stores and pay the going rate. Therefore, Mr. W is not lulled into false security by the possibility of being exempted from coverage, for he knows that "coverage or no coverage" he will have to continue to pay the same wages as his competition.

To emphasize his objection to the $1.25 minimum wage, Mr. W pointed out that retailing is an industry where productivity cannot be controlled. It is not unusual, according to Mr. W, to have employees nonproductive for as high as 4 hours. Since no one has yet invented a way to regulate the customers' shopping habits, he must be ready to serve them when they choose to pop into the store. Mr. W's figures show that the average clerk in his store only sells, in an average day, approximately $5 worth of merchandise per hour. Mr. W recognizes, as do the other retailers in Jeannette, the trend toward longer store hours and noted "just when the local stores should be considering longer hours, to meet the outside competition, we will be forced to reduce the number of hours we are open, and this will certainly work a hardship on the community."

And so the story goes, all up and down Clay Avenue. Every retailer will tell you that he would have to cut employees (predominantly students and older clerks), cut hours, cut services, cut down on advertising and raise prices. If this appears to be the kind of activity which will build a business community * * * we in Jeannette fail to see it that way. We are already covered by our State minimum wage, which recognizes the local problems to the extent that we are given a handicap over our big city competitor, Pittsburgh. And if you do not believe that a retail business in a small city does not enjoy the same sales potential as a retail business in a large city, you need only to look at the difference in rent. A small store location, which would rent for $500 in Pittsburgh, only costs $175 a month in Jeannette. If you do not believe that a clerk in a small town can live nicely on far less than her big city counterpart, you need only examine the cost of clothing, lunches, transportation, rent, and so on, of each.

This coverage is referred to too frequently as an extension of the protection of the Fair Labor Standards Act to these people, but in our community it adds up to loss of jobs, loss of bonuses, loss of commissions, loss of training opportunities, loss of incentive and recognition for outstanding ability and effort, loss of extra income opportunities for retired persons, students, etc.

Let's leave Clay Avenue and the retailers for a moment and visit one of the new industries attracted to Jeannette through the efforts of our chamber of commerce. This industry manufactures a product which is worn by ladies and manufactured by ladies; it's a brassiere factory.

This industry was brought to Jeannette as a part of the chamber's plan to diversify the local industrial base and make use of an unused labor pool existing in the area, unskilled women. When the chamber announced that applications would be accepted for jobs in this plant, over 12,000 women responded in a 2-day period, indicating the need for an industry which could use these untrained workers.

The minimum wage required for these women, while they are receiving their training, is $1 an hour. It is a union shop and upon completion of the training period the workers receive $1.15 per hour base pay, with additional incentive pay on a piecework basis. Through this schedule, the average worker makes over $1.50 per hour. Keeping in mind the fact that these are unskilled workers who could not be used in the higher paying industries, let us study the effect of the increasing of the untrained worker's rate from $1 to $1.25 an hour, on not only this industry but on the whole industrial payroll structure of the community.

If the minimum for these workers is increased to $1.25, then the trained worker must receive a proportionate raise in pay to provide incentive through retention of the wage differential. When the salaries of these unskilled workers are raised, the workers in the higher paying industries will in turn demand a proportionate increase in pay to retain the wage differential between unskilled women workers and skilled male workers. The companies, in turn, will have to raise the cost of the goods they manufacture and, in so doing, will further price themselves out of competition with foreign companies for the world market. This matter of foreign competition is already a problem of growing national and local concern and should be remedied rather than made worse.

It is not my intention that FLSA should become involved in protective tariffs, but I point to this example to show the vastness and the seriousness of the effects of an increase in the minimum wage rate on a national level. It is actually frightening to consider the effects of such legislation, as you trace it from small towns such as ours to the impact of these smalltown conditions on the national picture. When one of our companies loses out to a foreign competitor, as was our experience in Jeannette recently, the entire Nation suffers and the local workers lose work and jobs.

Our chamber and the people of our community have worked hard to bring in new industry and encourage expansion of the existing industries to provide jobs for our people and we will not sit idly by and watch jobs and advancement opportunities being taken from our people. That is why I am here, representing a group that is not made up predominantly of retailers, but of every type of businessman, including industrialists and the educators of our community, to ask you, not so much for the retailers and industries themselves as for their employees, to leave the setting of minimum wages up to the States and let higher pay come from increased sales and profit and local competition, as it must. Leave us the tools with which we may keep ourselves competitive with major cities and foreign competitors. Leave our young people the opportunity to earn extra money and receive training for careers. Leave our older people the opportunity to be self-supporting and to supplement their incomes. Leave our community and the incentive to grow and prosper, and, above all, leave our workers the dignity inherent in earning higher wages as a reward for superior work and ability.

Thank you for the opportunity to present the facts and forecasts of the effects of the proposed legislation on Jeannette and its people and on the Jeannettes all over the country.

Stephen B. Jackson, of Cedar Rapids, Democratic Candidate for State Representative, Presents Ideas of Vocational-Technical Industrial Schools (1) To Train Iowans in Iowa for Iowa, (2) To Stop Job Discrimination Against People Over 40, (3) To Attract New Industry to Iowa, and (4) To Keep the Young Citizens in Iowa

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. WOLF. Mr. Speaker, throughout a great part of America today, communities are struggling with the problem of attracting industry and at the same time of finding new employment opportunities for our young people, and farm families being forced off the farm.

Mr. Stephen B. Jackson, of my home district of Cedar Rapids, Iowa, at a recent National Association of States Planning and Developing Agencies meeting in Washington, D.C., proposed the idea for vocational-technical schools in Iowa to assist in the solution of these problems. Mr. Jackson has been my legislative assistant. He is now running for the Iowa Legislature from Linn County, Iowa.

Just 8 days after he spoke to the States Planning meeting in Washington, the Cedar Rapids Gazette, in an editorial, endorsed this idea. I would like to quote from the editorial:

Industries today demand high levels of skills and technical knowledge. Any firm looking over Iowa as a possible plant site is likely to give top priority to determining whether an adequate supply of trained workers is available. That supply would depend on how vigorously and effectively the State's trade and industrial education program is supported.

At a recent meeting in Linn County, Mr. Jackson again expressed his views on the establishment of these schools.

Because the problems I have just mentioned are not restricted to Iowa, but are familiar to many of my colleagues of this body, I would like to insert into the CONGRESSIONAL RECORD, for your attention and consideration, Mr. Jackson's speech containing his proposal for the establishment of vocational-technical schools. I believe you will find that his proposal possesses considerable merit, and hope that you will consider its use in your own States.

The speech follows:

SPEECH BY STEPHEN B. JACKSON, BEFORE THE NATIONAL ASSOCIATION OF STATES PLANNING AND DEVELOPING AGENCIES, WASHINGTON, D.C.

Iowa has been hit hard by the tremendous impact of the rapid replacement of manpower on our farms by modern machinery and scientific farming methods. Since our economy was not geared to accommodate the massive migration of people from rural to urban areas, and since there was not sufficient nonagricultural employment to take up the slack, many of our talented and

energetic young people left the State to seek jobs in other parts of the country.

Before it is too late, we can and must do something about strengthening our State's economy. In so doing we will be contributing to the individual dignity and welfare of our citizens.

We have made substantial strides in this direction through the growth and diversification of industry, along with agricultural production second to none. Iowa, in recent years, has made progress in obtaining a balanced economy of great stability and promise. But in order to reach the State's greatest potential, we must face the problems that still hinder our progress.

One of these problems, I feel, is a critical need on the part of rapidly growing and changing industry for skilled labor and technicians. Very simply, Iowa, at the present time, is failing to find a solution to this problem.

The solution, I feel, lies in a strong emphasis on a diversified and expanded program of vocational-technical education.

We in Iowa have long ranked at the top among the States in literacy, and while Iowans are known for their native skills, such qualifications are not enough in a highly technical age. What we need are workers who have at least a minimum of training in the basic technical skills of industry.

In approaching the problem of vocational-technical education, traditional thinking will need to be revised. An education program to enlighten the citizens to the great potential in vocational-trade and industrial education must be undertaken. A program must be worked out that meets the needs of the individual as well as the needs of management and labor.

New changes in technology require a new concept of training for increasing the numbers of skilled employees who stay in Iowa. Their vocational training must help them to become more flexible and more skilled in the problems and processes of advanced automation.

Due to continuing new advancements, additional education and training during the work career will be required. By keeping the present working force up to date on changes of automation, we can stop discrimination against people over 40 who lose their jobs because they are said to be unskilled.

In order to attract new industry to Iowa, high school graduates desiring training in the various trades or service areas will have to be trained before starting their new jobs.

This then is the challenge to industrial trade schools, and I, as a candidate for State representative on the Democratic ticket, accept this challenge to promote these vocational and technical schools so that our State and Nation will be a better place in which to live.

Export Program Wrong Medicine

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. BROYHILL. Mr. Speaker, one of the most interesting news periodicals emanating from Washington is the Babson's Washington Forecast. By a happy coincidence the editor of this newsletter is a constituent of mine, Mr. John J. Henry, who lives in the Belle Haven area of Fairfax County.

Mr. Henry is a native of Connecticut who, many years ago, saw the light and decided to become a resident of northern Virginia. Connecticut's loss has been Virginia's gain and we have been most happy to have him in our midst.

Jack Henry has had and is continuing a most interesting career in public affairs. A graduate of the University of Notre Dame, Jack became a radio commentator in Connecticut and later served as administrative assistant to the Honorable Joseph E. Talbot, former Republican Member of Congress from Connecticut and currently Chairman of the Federal Tariff Commission. During the war, Jack Henry was a very responsible agent for the FBI and has since developed into one of the better canvassers of news and public opinion.

Mr. Speaker, Babson's Washington Forecast of April 18, 1960, contains a most commendable article entitled "Export Program Wrong Medicine." Under unanimous consent I insert the lead article of this publication as a part of the RECORD:

Ike's national export-promotion program may show some beneficial results * * * but it points up again the economic blind spot in the vision of both major political parties.

The program amounts to a sort of "propping up" of the patient * * * instead of administering a medicine to cure his growing disease.

The President proposes a change to "hard-sell" methods as a means of bolstering our weakening export trade * * * and he plans new aids to prospective exporters designed to make their credit and financing problems simpler.

Admittedly, New York's Madison Avenue has shown in many cases that markets can be created by push and ballyhoo where markets did not previously exist.

However, over the long pull, basic laws of economics must be satisfied. If the product cannot meet the competitive tests of quality and price, it necessarily faces ultimate doom.

It is in this light that the outlook for our export trade remains dismal.

Basic conflict: The germs which are nurturing the disease now being suffered by U.S. international trade were born about a generation ago in the establishment of two completely contradictory national policies * * * which are now squeezing that trade in vise-like fashion.

The two courses are: (1) Our liberal foreign-trade policy, comprising gradual reduction of tariffs and quotas, continued foreign economic aid, and promotion of mass-production and mass-marketing techniques and facilities abroad; and (2) our "easy-way" domestic trend toward wage boosts that exceed productivity increases, followed by compensatory hikes in prices.

Senator SCHOEPPEL, of Kansas, summarizes the problem this way: "We are making the United States the worst place to buy and the best place in the world to sell."

New isolationism: The Nation's liberals have been the ardent promoters of both policies.

By their foreign-policy proposals, they appear to recognize that the world is getting smaller * * * and that the nations of the free world must become increasingly-dependent upon each other.

But, by their relentless advocacy of ever-higher wage rates in the United States, they exhibit their failure to comprehend that such a policy can lead only to the ultimate necessity of our complete economic isolation from the rest of the world * * * in the interest of our economic survival.

Wage rates in the United States are now vastly higher than those in most other countries. Because labor is necessarily the most important part of the cost of production, higher prices of American goods are the inevitable result.

The combination of this growing price disparity and the gradual reduction of U.S. tariff barriers has quite naturally resulted in greater imports and fewer exports by the United States.

As both trends continue, our difficulties will increase.

We have deliberately exported our mass-production know-how to other lands * * * and have given or loaned those countries the funds with which to establish their great new industries.

In addition, other things happened: (1) The nations of Europe banded together in the European Common Market and the so-called outer seven to provide a vastly expanded home market; and (2) production-cost advantages and liberal U.S. tariff policies teamed up to provide a bonanza export market in the United States.

Rising toll: The number of U.S. industries affected is mounting yearly.

It would be impossible for us to take the space to list the American activities which have been hurt by price competition from abroad. The list runs the gamut of American industrial life.

Many of our important industries are feeling the pain—textiles, autos, chinaware, electronics, office equipment, appliances, cameras, watches, toys, sporting goods, etc.

The quality objection is no longer valid. The argument that cheap is cheap has been disproved with dramatic finality.

American industry itself has begun to recognize that the only defense against competition from low-cost labor areas is to use such labor in its own production.

As a result, there has been a tremendous exodus of American capital for the purpose of building production plants in other lands. Statistics indicate that American corporations are investing about $500 million per year for such purposes in Western Europe alone.

Practically all major U.S. corporations have now built or bought such plants * * * or plan to do so in the near future.

Their objective is twofold: To provide, by the only means possible, a market for their products in foreign lands * * * and to meet the competition of foreign importers by bringing the foreign-produced goods of American corporations into the United States.

Other methods by which many big U.S. companies are attempting to meet this increasing price competition include: The importation of component parts which are then assembled into a shell produced in this country or, in many cases, the importation of finished products for marketing in this country under the established American name of the importing company.

Shortsighted labor: Such action may, of course, help to solve the problems of individual corporations but it will not lead to the utilization of America's growing supply of labor.

Yet, it is a strange paradox that America's union leaders have been in the forefront of the battle for relaxation of international trade barriers.

Espousal of such a cause by American workingmen might make sense if it were also wedded to a fight to convert productivity increases at home into ever-lower prices for the products produced by American labor.

However, in obviously self-destructive shortsightedness, labor has consistently chosen to fight for its gains in the form of higher wages * * * regardless of the irresistible upward pressures thus placed on price levels.

If, over the past 20 years, organized labor had bargained as hard for price cuts as it did

for wage boosts, the same increase in actual standard of living would have resulted * * * and, today, U.S. industry would be able to beat its price competition the world over.

It is folly to believe, however, that labor would alter its course * * * even in the face of such realities.

Therefore, it seems reasonable to predict that we will eventually return—full cycle—to a national policy of economic isolationism * * * with a continued emphasis on numbers of dollars, rather than on the value of the dollar.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Six Mile Creek: Watershed Project of the Year

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. FULBRIGHT. Mr. President, on Monday I called to the attention of the Senate the honor recently given to the Six Mile Creek watershed project located in Franklin and Logan Counties, Ark. This project was selected by the Seventh National Watershed Congress as the 1960 watershed project of the year. An excellent editorial recently appeared in the Arkansas Gazette concerning this award and the benefits which have been derived from this conservation project. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, Apr. 23, 1960]

SIX MILE'S EXAMPLE WORTHY OF EMULATION

The selection of Six Mile Creek in Franklin and Logan Counties as the "Watershed Project of the Year" represents considerably more than attaching an impressive title to a coordinated system of conservation efforts. The National Watershed Congress studied reports on all similar projects in the United States before it decided that the Arkansas conservation effort came nearest to measuring up to these requirements:

1. The extent of participation of all agencies and groups within the watershed such as the soil conservation districts, county and municipal governments, business, and other organizations.

2. The adequacy of the project in meeting the conservation and utilization needs of the watershed.

3. The status of the project—meaning the degree to which the installations were serving their intended purposes.

In order to understand the purposes of the project it is necessary to know something of the objectives set out in the Watershed Protection and Flood Prevention Act (Public Law 566 of the 83d Cong.).

This law provides for a complete conservation plan in the selected watershed. Logically, the work must begin at the tops of the hills where the tiny fingers of the streams reach for their first trickle of water. The hills are to be terraced or protected by cover crops to prevent the first hint of erosion or rapid runoff.

Ponds trap the water in the small valleys and lakes with automatic drawdown outlets delay the potential flood in the larger streams. Little knowledge of engineering is required to understand that if this thorough treatment were applied to a watershed all the way from the source to the mouth the flood problem would be solved and natural resources would be preserved for present and future use. The rule would apply to the largest rivers as well as to the streams in the Six Mile Creek class.

Some idea of what this could mean, both agriculturally and industrially, can be seen in the results already obtained in the two counties. Two industries that are of major importance to the area—a comb factory at Booneville and a hosiery plant at Ratcliff—were induced to move into the watershed only because of the availability of water from the lakes. Other towns obtain water for their normal needs from the impoundments. Agricultural benefits include protection of the flatlands from flooding, soil conservation on the hills, and adequate water for livestock. Recreational facilities, improved habitat for wildlife and other fringe assets make the project even more attractive.

Auditors of Six Mile Creek have estimated that the ratio of benefits to costs in the project is $1.51 in assets to each $1 spent. Unfortunately, few of our other public undertakings show such favorable returns.

TVA Circles the Globe as a Model for Developments Around the World

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. EVINS. Mr. Speaker, it is paradoxical that while here within the United States, where the TVA idea originated, there are those who continue to minimize its significance and importance, throughout the rest of the world it has become a model of democracy in action and a symbol of hope for a new and better way of life. The TVA idea and principle has been called America's most valuable export and has become a pattern and a model for similar developments in every region of the world.

Recently the Milwaukee Journal, a newspaper far removed from Tennessee and the TVA area, published an article appraising what the TVA has meant not only to the Nation but to the world. Because this article so well summarizes this great influence of the TVA throughout the world, I request unanimous consent to have it inserted in the Appendix of the RECORD.

The article follows:

TVA CIRCLES THE GLOBE—DEVELOPMENTS PATTERNED AFTER TENNESSEE MODEL AIDING BACKWARD AREAS

(By R. G. Lynch)

The recent row, still echoing in Washington over TVA's award of contracts for power-generating equipment to British and Swiss firms over loud protests from American companies must have attracted more attention internationally than it would have if any other governmental agency had been involved.

For TVA are magic letters the world over, which have earned great respect for the United States in many countries.

In the long view, they may earn for the United States a more tangible return, foreign trade experts have said, by opening up vast markets for American goods, as the power generated by new hydroelectric systems spurs the industrial developments and purchasing power of underdeveloped areas.

TVA stands for Tennessee Valley Authority. The letters probably conjure up for most Americans a vague picture of big dams and reservoirs. Few understand that TVA is a model for comprehensive valley development.

SYMBOL OF HOPE

But in Asia, Africa, Central and South America, and Australia TVA means economic hope—flood control, power, irrigation, industry. The dams along the Tennessee River, the powerplants, the Authority's offices have been a mecca for the whole world.

Justice William O. Douglas, of the U.S. Supreme Court, wrote in the Progressive magazine, after an Asian tour:

"It may come as a surprise to many Americans that their Tennessee Valley Authority program is not only well known to countless Asiatics, even in the remotest reaches of that continent, but has come close to mean to them a symbol of a hopeful new way of life for themselves and their children."

In 1958, some 2,700 visitors from foreign lands looked over TVA installations, and 68 engineers, technicians, and others were trained there, some for months, so they could return to their own countries and help with similar developments. Not since 1949 has there been fewer than 1,000 foreign visitors and for the last 12 years foreign trainees have averaged 50 a year. Since World War II more than 12,000 foreign visitors from 90 countries have made the trip.

HIGH OFFICIALS VISIT

Presidents of Mexico, Chile, and Brazil have been there, and their countries have modeled developments after TVA. Prime Ministers Nehru of India, Ben-Gurion of Israel, U Nu of Burma, and Daud of Afghanistan were there, and all their countries have TVA-type projects or plans—or hopes.

The Kahn of Kalat in Pakistan, the Egyptian Minister of Public Works, the Queen of the Netherlands, the Prince Regent of Belgium, a Prince of Yemen, a flock of ambassadors—the list of distinguished visitors is long and impressive.

And all over the world, TVA has been copied. Other nations knew it could be done; the United States had proved it. Some had help under Point 4 agreements with the United States. Some got advice from United Nations mission.

So there is a "miniature TVA" on the Orontes River in Lebanon, a "little TVA" in the Gal Oya Valley of Ceylon, the "Caribbean TVA" in the Yallahs Valley of Jamaica, the "Central American TVA" on the Rio Lempa in Salvador, a "TVA for the Highlands" in Scotland, a "TVA for France" on the Rhone, the "Andean TVA" on the Santa River in Peru, the "TVA twin" on the Snowy and Murray Rivers in Australia.

Before the Communists drew the Iron Curtain across China, the nationalist government started a YVA (Yangtze Valley Authority) for the Yellow River. The National Resources Commission of China held a meet-

ing at Knoxville, Tenn., in 1943, and its engineers conferred with TVA officials and engineers. The Communists apparently are carrying out the development plan.

In many countries, these projects mean a great deal more to the economy than TVA has meant to the United States: Not that they all are bigger programs, but they bulk much larger relatively where the national industrial and agricultural development is embryonic.

CLOSEST TO TVA

India affords examples. The closest thing to a copy of the TVA program anywhere in the world probably is the Damodar Valley Corporation (DVC). The Mahanadi Valley Project (MVP) and the Bhakra-Nangal Project (BNP) also owe much to American prototype.

Seven or eight high dams on the Damodar (four of them completed) along with two low dams and a steamplant, will provide water for irrigation and power, foster navigation and control floods, where devastation has been the periodic expectation.

The other major programs are similar. The first of three Mahanadi dams is complete and the Bhakra's first is about ready. These three programs together are expected eventually to provide irrigation for nearly 10 million acres and generate 1,800,000 kilowatts of power. The generating capacity can be increased when needed. Their impact on agriculture and industry is expected to be tremendous.

The remote Himalayan Kingdom of Bhutan, between India and Tibet, will be one of the areas drawing power soon from a big TVA type hydro electric project India is building on the Jaldhaka River. Prime Minister Jigme Dorji of Bhutan was in New Delhi recently discussing the project with Indian officials and returning a visit Prime Minister Nehru had paid him in September.

TVA AID CONSULTS

India hired a former TVA head planning engineer to help prepare plans for the unified river developments and other former TVA men were consultants. After the DVC program was set up, a former TVA construction engineer became its chief engineer in 1950.

David E. Lilienthal, TVA chairman for many years, was consulted by India and Pakistan about a plan for the Indus River.

In 1953, a sort of TVA branch technical library was established in Calcutta, run by the Indian Journal of Power & Valley Development.

To detail developments and plans in other countries is mainly to repeat the same story many times. All want water for irrigation and power channels for water borne commerce, protection from floods.

The United Nations had TVA draft a plan for the Jordan River in the Near East. Gordon R. Clapp, while TVA Chairman, headed a U.N. economic mission pushing hard for a quick start to the Middle East. Dr. E. A. Morgan, first TVA Chairman, became consultant to the Volta River Authority in the African Gold Coast, now the new nation of Ghana.

The Ghana Government is on the Volta River project, which it sees as its best hope of transforming the nation from a single crop (cocoa) economy. The proposal is for a 4100-foot dam, 310 feet high, which would impound a lake 230 miles long. The hydroelectric development of 617,000 kilowatthours a year, 100 times the nation's present capacity, would be used to process Ghana's great bauxite reserves. The lake, it is estimated, would add 50 percent to the nation's production of fish. Water would be used to irrigate present arid plains and rice would be grown along the reservoir edges as drawdowns lowered the water.

In the tense middle East, Premier Manouchehr Eghbal of Iran, strategic Western defense link on Russia's southern border, said that now that this country had signed the new defense pact with the United States, he would move ahead with that country's billion-dollar economic development plan, a key feature of which is a big hydroelectric network. He said that a deputy would go to Washington soon to compete negotiations for a $60 million World Bank loan for a multipurpose dam, part of the Khuzestan project for which the Iranian budget provides $130 million in the current year alone.

Employees of TVA have served development staffs in Iran, as well as Mexico, Puerto Rico, Colombia, Brazil, Peru and Turkey. Engineers, technicians and officials have come from Japan, Iran, Ceylon, Salvador, France, Wales, Afghanistan and Australia to confer.

British, Egyptian and Uganda delegations visited TVA headquarters and installation in connection with planning for the Nile River. Chilean and Ecuadorean groups spent months at TVA installations.

More will be coming to this fountain of economic hope, for developments frankly modeled after TVA are also in the making in the Union of South Africa, Greece, Italy, Iraq, Portugal, the Belgian Congo, the Central African Federation and Liberia.

The rivers of the world are being harnessed to improve the lot of mankind or at least to try to keep pace with the hungry millions added to the population of the backward areas every year.

The Saline Water Conversion Program Makes a Real Contribution to Our Fresh Potable Supplies

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27, 1960

Mr. CASE of South Dakota. Mr. President, on April 15, Mr. J. W. O'Meara, Office of Saline Waters, gave a very thoughtful and enlightening address on the work and progress of the Office of Saline Water, before the 137th national meeting of the American Chemical Society, at Cleveland, Ohio.

Low-cost saline water conversion is a problem that received little attention until the passage of Public Law 448, 82d Congress, 2d session, providing for research and development of practical means for the economical production, from sea and other saline waters, of suitable water for agriculture, industrial, municipal and other uses. This research act was extended in 1955 and, in 1958 we authorized five demonstration plants, three on sea water, and two on brackish waters.

The Congress had long realized the value of the resource that would be ours if a means of converting the saline waters and the brackish waters at economical costs could be found. In the 7 years the Office of Saline Water has been in existence considerable progress toward the achievement of this goal has been made.

In spite of generally rising costs, the cost of converting sea water to fresh water is coming down. Just prior to World War II the cost of converting sea water to fresh ranged upward of $4 per thousand gallons.

In one or more of the plants authorized under the Saline Act, Public Law 85–883 that the Department will construct and operate, it is expected to convert saline water to fresh for less than $1 per thousand gallons. It is estimated that the cost for converting brackish water to fresh will be 50 cents or less.

Mr. President, I ask unanimous consent that the address of Mr. J. W. O'Meara given before the 137th national meeting of the American Chemical Society be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OBJECTIVES AND STATUS OF THE FEDERAL SALINE WATER CONVERSION PROGRAM

(Address by J. W. O'Meara, Office of Saline Water, Department of the Interior, Paper No. 21, 137th national meeting of the American Chemical Society, Cleveland, Ohio, April 13, 1960)

It is a singular honor for me to extend to you the personal greetings of Dr. A. J. Miller, Director of the Office of Saline Water of the Department of the Interior, and to express his deep appreciation to the American Chemical Society for including a symposium on saline water on the agenda of your 137th national meeting.

The day of the water witch is over. We must turn to scientific and technological research to develop a new source of supply that can provide an ever-growing percentage of tomorrow's water. It is our hope that the papers presented at this symposium will excite the interest of your members and encourage them to apply their technical competence to the complex problems that must be solved in order to develop low-cost processes for the conversion of sea or brackish water to fresh potable supplies.

You are all familiar with the common expression of American slang "The sky is the limit." Indeed, many people still use the phrase to express an unlimited support or endorsement. Yet in the past year and one-half the meaning of the expression has been changed by satellites that now orbit the globe, and the expression must now be interpreted as a limited phrase, for we now know that the sky is no longer the limit. As we stand on the threshold of space, with our eyes glued on the stars, it is difficult to lend an ear to the earthy prediction of Interior Secretary Fred A Seaton that unless we plan ahead with vigor and prudence, the provision of adequate supplies of water—just plain ordinary water, may soon be our No. 1 domestic problem.

WATER SOON TO BE OUR NO. 1 PROBLEM

The experience of the Department of the Interior over the past years has clearly revealed one basic fact—water problems, in one form or another, touch all 50 States of the Union. In some areas it is a problem of availability, in others of salinity or quality; it may be a problem of maldistribution, or in some cases a problem of excess. Regardless of the cause, as a nation, we can no longer regard with indifference the increasing imbalance between the supply and demand for water in the United States.

In the United States we are now using about 240 billion gallons of water per day, and this rate of demand is causing increasingly severe water problems in many sections of the country. In 1957, a study conducted by the U.S. Geological Survey revealed that in over 1,000 cities and communities, representing one-seventh of the Nation's entire population, water shortages of varying degrees required their citizens to endure restricted use of water.

If our present rate of demand can cause a problem of this magnitude in a year of moderate drought, what then will be the scope of the problems we may have to face in just 20 years when, according to the U.S. Geological Survey our demand for water will more than double, reaching the immense total of 597 billion gallons per day—if we have it available. The year 1980 does not mark the peak of demand, the consumption curve is expected to continue to rise as our population continues to grow.

POPULATION INCREASE ADDS TO THE PROBLEM

In the foyer of the Department of Commerce in Washington, there is a huge counter turning big numbers ahead at the rate of 330 per hour. The register is recording our national population, which at the present time is increasing at that rate. Last week it passed the 180 million mark, and within the next 20 years, according to Census Bureau projections, we will have a population of 260 million, and 50 years from now our population will have more than doubled, probably ranging around 370 million people.

The population gain has already made itself felt by creating an increasing imbalance between the supply and demand for water in the United States. Although there is a growing public awareness of the problems we must face to maintain adequate supplies of water, we have too long taken for granted the availability of water for our every need. Only in recent years have we realized that water suitable for man's use may be a limited commodity.

WATER IS CHEAP

Water is cheap. In most U.S. cities we can purchase a ton of clear, pure, fresh water, delivered to our homes or factories, for about 5 cents a ton—or 25 cents a thousand gallons—but water is used in such tremendous quantities that it requires vast sums of money to provide the facilities to collect it and put it to beneficial use where it is needed. Quite naturally, water supplies nearest the point of demand were the first to be developed. As these sources become inadequate to meet growing demands, cities are forced to reach considerable distances to tap additional sources of supply, at sites more expensive to develop, and at today's prices.

Long ago southern California outgrew its local supplies and had to reach 240 miles across deserts and mountains to the Colorado River for its water supplies. This project, once criticized as a wasteful overdevelopment, will soon be inadequate. In the next general election the citizens of California will vote on the most expensive proposition ever placed on a ballot. They are being asked to approve a $1.75 billion bond issue to harvest the fresh water of the Feather River in northern California, transport it over 400 miles, lift it about 4,000 feet over the Tehachapi Mountains, and deliver it to the Metropolitan Los Angeles area.

There is a plant on the Island of Aruba, in the Caribbean, that is now producing 2.7 million gallons of fresh water per day at a cost of about $2 per thousand gallons. Of the land-based plants scattered about the globe, with a combined capacity of about 20 million gallons of fresh water per day, the plant at Aruba is the most efficient. Based on our cost standards, these plants are expensive producers, but they are in existence because the cost of water from alternative sources is even higher. As an example, over the past several years the Department has barged over 100 million gallons of fresh water from Puerto Rico to supply the minimum requirements of the people of St. Thomas, Virgin Islands at a cost of about $6 per thousand gallons.

PROBLEM OF ADEQUATE SUPPLIES IS NOT LIMITED TO HOT AND ARID AREAS

The increasingly complex problem of providing adequate supplies of water is not limited to a few hot and arid areas of the South and Southwest. Not long ago, New York's Gov. Nelson Rockefeller, in a letter to Secretary Seaton stated, "New York State faces a very serious water problem in its Long Island counties outside the city of New York. The great outpouring of population has created a heavy demand for fresh water in Nassau and Suffolk counties and the forecast is for even greater population growth."

A letter from Gov. Robert B. Meyner, of New Jersey states: "The region between Trenton and Wilmington is one of the faster growing industrial areas in the Nation. Many water problem areas already exist in New Jersey. The availability of economically feasible surface water storage sites is already a serious problem."

Examined within the framework of these examples and many others which could be offered if time would allow, it is not difficult to see that the task of providing ample supplies of fresh water for the America of tomorrow may indeed be our No. 1 domestic problem. At least one implication of our ever-increasing use of water is unmistakable: We must find new sources of fresh water, and the most likely sources, obviously, are the great oceans, and the vast reserves of brackish inland waters.

THE PROBLEM OF DISTILLING SEA WATER

As a part of his quest for water, man has been trying for a long time to brew a drink of fresh water from the sea, probably a lot longer than most people realize. For centuries people generally have known how to turn the trick: just distill it. The basic concept of the science is probably as old as the teakettle. But what the world is still searching for is the answer to the question: How do you do this on a large scale at a cost cheap enough to substitute for or augment water from conventional sources?

The first practical conversion units came with the advent of the steamship and its requirement of fresh water for boilers. Today, most of the large oceangoing vessels have their battery of evaporators. The *Forrestal* class carriers of the U.S. Navy for example, carry four 50,000-gallon-per-day evaporators to supply the water needs of those huge ships and their large crews.

While shipboard supplies of water are vital to navies and the maritime industry, the problem in which we are interested is quite different. Aboard ship the primary interest is a reliable supply of water, the cost of the water is of secondary consideration. The interest of the Office of Saline Water is centered on land-based plants that can produce fresh water from the sea at low cost with the emphasis on cost.

CONGRESS PASSES THE SALINE WATER ACT

The U.S. Government's work in this field goes back to 1952, when Congress passed the Saline Water Act to provide for research and development of practical methods of producing fresh water from saline sources. The 1952 act authorized $2 million for a 5-year program. In 1955 the act was amended by increasing the authorization to $10 million and extending the life of the program through fiscal year 1963.

Public Law 85-883, approved by President Eisenhower on September 2, 1958, added a new responsibility to the Office. It authorizes $10 million for the design, construction, and operation of five saline water conversion plants to demonstrate the reliability, engineering, operating, and economic potentials of sea or brackish water conversion processes.

The law provides that three of these plants shall be for the conversion of sea water to fresh. One to be located on the east coast, one on the west coast, and one on the gulf coast. At least two of these plants shall have a capacity of 1 million gallons of fresh water per day. Two of the plants will be designed to convert brackish water to fresh. One to be located in the northern Great Plains and the other in the arid areas of the Southwest. One of these plants must have a capacity of at least 250,000 gallons per day. Each of the five plants must utilize a different process.

THE PUBLIC IS INTERESTED

An accurate barometer of the nationwide interest in the saline water conversion program is provided by the number of requests received from civic bodies, public officials, industrial organizations, and private citizens asking consideration for their area as a site for one of the authorized plants. The extent of the interest, I believe, will surprise you. Nearly 200 applications have been received from cities and communities in every State on the coastal perimeter, from 12 inland States, and from Alaska and Hawaii.

FIVE PROCESSES AND FOUR SITES SELECTED

Secretary Seaton has selected five processes and four sites for the demonstration plant program. Several excellent technical papers will be delivered to this symposium which will describe the various processes in considerable detail. I will eliminate, therefore, any description of the processes as I outline the present status of the demonstration plant program.

The first plant will be located at Freeport, Tex. Utilizing the long-tube vertical multiple effect distillation process it will be designed to produce fresh water from the sea at the rate of 1 million gallons per day. W. L. Badger & Associates of Ann Arbor, Mich., are performing the architect and engineering services. Invitations for construction bids were issued on March 14, and plans and specifications were available on April 1. Bids will be open on May 24. We have sold over 125 sets of plans and specifications for this plant which provides a second indication of the sharp interest in the saline water conversion program.

ATOMIC ENERGY COMMISSION TO BUILD AN ATOMIC REACTOR

The Atomic Energy Commission is authorized to build a low-temperature low-pressure atomic reactor. We asked the Commission to locate their reactor at the site of one of our demonstration plants for a combination nuclear-reactor saline-water distillation plant. The Commission has agreed to do this if a mutually acceptable site can be located. For the combination plant, Secretary Seaton selected the multistage flash process for a 1-million-gallon-per-day plant to be located on the west coast. We selected a site on Point Loma at San Diego for this plant, but we have recently learned that this site is not acceptable to the AEC. The Fluor Corp. of Whittier, Calif., have been awarded the architect and engineering contract for the distillation plant, and if we can resolve our site problems, we hope to be able to let a construction contract in July or August.

WILL CONVERT BRACKISH WATER TO FRESH WATER IN SOUTH DAKOTA

A process that was no more than a laboratory phenomenon when the Office of Saline Water was authorized in 1952 has been rapidly developed to the point where it is now one of the most economical processes for the conversion of brackish water to fresh. This process, electrodialysis, was selected for the third demonstration plant. It will be located at Webster, S. Dak. The Bureau of Reclamation Laboratories in Denver, Colo., is preparing the specifications for this plant which will be designed to produce 250,000 gallons of fresh water per day. Operating on water containing about 4,000 dissolved parts of salt per million parts of water, this plant will remove about 1 ton of salt daily to produce product water with less than 500 dissolved parts of salt per million parts of water which is required to meet U.S. Public Health standards for good drinking water. If we can meet our established timetable—and meeting schedules is standard procedure under Dr. Miller's able direction—the con-

tract for this plant will be awarded late this summer.

IN NEW MEXICO

The fourth process, forced-circulation vapor compression will be designed to produce at least 250,000 gallons of fresh water per day in a plant to be located at Roswell, N. Mex. Aside from providing badly needed supplemental water to the city, the plant offers a second exciting possibility. Continued heavy pumping necessary to meet the growing demand is gradually lowering the water table in Roswell's present fresh water aquifer.

It has reached a point where saline water is beginning to encroach and endanger their source of fresh water. By pumping saline water from the brackish water aquifer we may be able to retard this encroachment and at the same time, by providing fresh water from the conversion plant, the city can reduce its pumping from the fresh water aquifer which may permit a gradual recharge of the aquifer.

A NEW FREEZING PROCESS FOR EAST COAST

The conversion of saline water to fresh by freezing is relatively new, but we feel it has great potential. Theoretically freezing has several inherent advantages over conventional distillation processes. For example, the lesser tendency toward scaling and corrosion because of the low operating temperatures involved, and more important, perhaps, the lower energy requirement to freeze sea water as compared to the energy required for the evaporation of sea water.

Freezing is so new that the world's first freezing process pilot plant began operating just last October at the Carrier Corp. plant in Syracuse, N.Y. Preliminary tests have been completed and the equipment is being dismantled for shipment to a seashore location for further operational testing. We have awarded the Blaw-Knox Co. of Pittsburgh a contract to build a 35,000-gallon-per-day pilot plant to test another freezing process developed at Cornell University. This process is based on the flash evaporation of a volatile and immiscible hydrocarbon, such as butane, in direct contact with sea water to cause part of the water to freeze.

For the fifth plant we will utilize a freezing process. This plant will be located at a yet-to-be-selected site on the east coast. It will be designed to produce fresh water in the range of 150,000 to 350,000 gallons per day. We will select the site this summer, but construction is not contemplated before fiscal year 1962.

OTHER TYPES OF PILOT PLANTS

Other pilot plant activity includes testing of solar stills at an experimental station near Daytona Beach, Fla. At the Bureau of Reclamation Laboratories in Denver, we have two electrodialysis units one built by Ionics, Inc., of Cambridge, Mass., and the other by the T.N.O. of the Netherlands. We have also ordered a unit from the Japanese which will be delivered for testing within 6 months. Various types of membranes are also being tested at Denver. Distillation experiments are continuing in research facilities located at Wrightsville Beach, N.C. Operational tests of a small vapor-compression still designed by Dr. K. C. D. Hickman to supply the water requirements of an average home begin today at Daytona Beach.

THE OFFICE OF SALINE WATERS MAKING REAL PROGRESS

Research and development contracts with universities, research organizations, and industrial firms are probing into the fields of heat transfer, scale prevention, corrosion, membranes, gas hydrates, solvent extraction, and many others, all designed to help us reach our goal of low-cost converted water.

The plants we are about to build will demonstrate the progress that has been achieved through 8 years of research that has been supported by an average annual appropriation of less than $725,000. When the Office of Saline Water was authorized in 1952, the cost of conversion ranged upward from $5 per thousand gallons. We expect the two 1-million-gallons-per-day demonstration plants to produce fresh water from the sea for about $1 per thousand gallons. Our engineering extrapolations indicate that when these processes are incorporated in multi-million-gallons-per-day plants we will gain economies that will enable us to produce fresh water from the sea for less than 50 cents per thousand gallons, and prices even lower than that may be expected for the conversion of certain brackish waters.

These estimates of cost are based on our standardized procedure for estimating saline water conversion costs. It includes all costs at today's prices—land, capital investment, interest, operating costs, maintenance, taxes, insurance, and a rather severe 20-year amortization schedule.

The demonstration plant program has captured the interest and imagination of the Nation and the world, but we believe, and I think you will agree, that plant construction is not the key to low-cost conversion.

While we are building these plants we will continue to pursue our research and development program, for research is the key to progress. To emphasize my message to you today, let me repeat what I said at the outset: We must turn to scientific and technological research to develop a new source of supply that can provide an ever-growing percentage of tomorrow's water. Your participation in this symposium is encouraging evidence of the support and interest of the American technical competence. With this caliber of support we can look forward with confident assurance that the ancient dream of man—fresh water from the sea—can become an economic reality in our time.

Rolling Prosperity

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. WIDNALL. Mr. Speaker, on April 22, 1960, Mr. C. Canby Balderston, Vice Chairman, Board of Governors of the Federal Reserve System, delivered an excellent address on the U.S. economy before the Albuquerque Chapter of the Society of Residential Appraisers, in Albuquerque, N. Mex. The viewpoint expressed is an objective appraisal that should be of benefit to the Congress. Under unanimous consent the talk follows in the Appendix:

ROLLING PROSPERITY

(Remarks of C. Canby Balderston, Vice Chairman, Board of Governors of the Federal Reserve System, before the Albuquerque Chapter, Society of Residential Appraisers, Albuquerque, N. Mex., Apr. 22, 1960)

What should our economy be doing, and for whom?

The generation now growing up is going to need job opportunities in greatly increased numbers after 1964—almost half again as many as during this year. By that time the number attaining the age of 18 will increase markedly because of wartime births. Moreover, wage earners of the present and their wives will continue to need steady jobs and security of savings. The average wife will need these savings even more than her husband for, having married at an age younger than he and having a longer life expectancy, she will outlive him by about 8 years.

Fortunately, individuals are saving, though not fast enough to satisfy the world's desire to invest. The interest received by individuals and nonprofit institutions is 2.5 times as large as the interest they pay out. For the sake of the millions who rely upon these savings, it is mystifying that more national leaders do not dedicate their talents to protecting the integrity of the dollar. Moreover, savings are needed to undergird technological advance. Upon these two, savings and technology, our country must depend to achieve a still higher scale of living, to help it compete in world markets, and to provide more jobs and more dependable ones. The attainment of these objectives requires teamwork by a triumvirate: sound fiscal policy; sound monetary policy; and prudent business decisions.

I will not discuss fiscal policy except to observe that a Federal budget in reasonable balance over the business cycle is needed to give private borrowers sufficient access to capital markets. In addition, it helps to retain confidence in the dollar by investors, here and abroad. The central banks of the world have been keeping their reserves in dollars as well as in gold, but the continuation of such trust requires that most of the time our Nation live within its income as one aspect of financial management of convincing quality.

The second member of the triumvirate, monetary policy, has been delegated by the Congress to the Federal Reserve System. Such policy is an essential means of keeping the Nation's total money demand, to use Clay J. Anderson's phrase, in balance with its capacity to produce. The effect of flexible monetary policy is contracyclical in that it contributes to the orderly growth of business and to the stability of the general level of prices. The prices of individual commodities will move up and down around this general level as they guide resources into the uses most desired. What has been bad in recent years has been the tendency of so many prices to move only in one direction that people got the idea an upward price drift was inevitable. Although monetary policy alone cannot provide financial equilibrium in the face of large deficit spending, it does help to provide the climate in which booms and busts become less violent. When total demand presses so hard upon scarce resources as to push prices upward, monetary policy restricts credit expansion. When total demand leaves substantial resources unused, it fosters credit expansion as a stimulant to business.

I will postpone the discussion of decision-making and turn to some recent changes in the business cycle. This cycle is not a homogeneous thing, but a composite of many cycles; some moving up and some down. For example, the consumption of electricity has been advancing, while farm prices and incomes have been tending downward. It is scarcely necessary to remind you that the business upturn that began about 2 years ago caused certain indicators to climb to all-time peaks. These include gross national product, net disposable income, and the Federal Reserve index of industrial production. Throughout the postwar period, some sectors have usually been expanding to offset declines in other sectors. Such is the nature of rolling prosperity. But there are ever-present forces that threaten business stability when it is at high levels. The most prominent are fluctuations in inventories and in plant construction, changes in the rate at which consumer installment and mortgage debt is incurred, the pricing policies of business as well as the wage demands of labor, and variations in profits. Of these, I will discuss only the first two.

In the 1957–58 recession, business inventories that had been accumulating at the annual rate of $2.7 billion were, by the first quarter of 1958, being liquidated at the annual rate of $6.9 billion. Hence, the turnaround from accumulation to decumulation was $9.6 billion. Between that low point and the second quarter of 1959, which preceded the steel strike, there was a turnaround in the opposite direction of $17.6 billion. After the rate of accumulation had reached a peak of $10.7 billion, the strike caused inventories to diminish during the third quarter of 1959 at an annual rate of $1 billion, making a downturn of nearly $12 billion. Once the steel strike was settled, inventories began to amount again, with resultant stimulus to the economy. Whether or not inventories are too high at any moment turns in large part upon how fast they are accumulating in relation to the rate of sales. A given inventory level may suddenly appear disturbingly large once sales volume starts to decline, or to level out, or even to increase at a slower rate. In fact the momentum of the shipments that accompany a high rate of production tends to pile up inventories after sales begin to slacken.

Plant expansion, too, has long been looked upon as a destabilizer because of its volatility. Following the consumer boom of 1955, for example, the expectations of population growth, together with the prospect of higher construction costs, caused some companies to build more capacity than they needed. Plant construction in 1956 was 22 percent higher than that of the previous year. Such a building binge has frequently led to an agonizing reappraisal of the amount of capacity in a given industry relative to the demand for its products. Such appraisals of capacity at home and abroad have been evident not only in the short-term recession of 1957–58, but since. It will be interesting to observe the impact upon future expansion decisions of the awareness of the capacity that now exists.

SOME ECONOMIC MISCONCEPTIONS

Our country is plagued at times with the "free lunch" illusion. Notions that there is an easy solution to every hard problem have too vital an influence upon our future for them to be innocuous. They undermine the will of citizens and their representatives to make the hard decisions required if our Government is to live within its means. As Boulding has said: "Without the heroic, man has no meaning; without the economic, he has no sense."

One misconception is that creeping inflation is the necessary alternative to unemployment. Experience teaches that the contrary is true: that good jobs depend upon good dollars. Over the long pull, price stability does not inhibit economic growth, it encourages that growth.

Another fallacy concerns interest rates. There are those who contend that because rising interest rates add to costs, they are a cause of inflation, whereas in fact they are a product of it. Those preaching this doctrine ignore the smallness of interest payments relative to total costs. For State governments the gross percentage is only 1.4 percent, while interest is received by State pension and sinking funds in an amount about two-thirds as large as the gross interest paid. For municipalities, the gross interest percentage to total costs is 3.3 percent. Clearly, what these governmental units suffer from is rising cost of items other than borrowed money. If interest rates had been kept down in the face of rising demand by printing currency or by creating deposit money. State and municipal salaries and other costs would have risen still faster. During the past decade inflation has doubled the cost of services and construction that States and cities have provided. Consequently, the amounts they borrowed increased also, with a resultant rise in the amount of interest paid.

Then there are those who attribute to the Federal Reserve the purpose of making interest rates high. Actually the System desires the lowest interest rates compatible with an adequate rate of saving and with a sound dollar. "Federal Reserve operations to release or absorb bank reserves unquestionably influence short-term and also long-term interest rates, but the extent of this influence is easily exaggerated. Monetary policy is effective only so long as it works in general consonance with the economic realities underlying the situation. These realities include the basic demands for funds, whether to meet seasonal needs, other short-run needs, or for capital formation, and the basic supply of funds through saving. Federal Reserve actions cannot for long enforce rates of interest on the market that are either above or below the rates that maintain a balance between saving and investment.

"Changes in the rate of monetary growth can represent only a very small part of the total flow of funds through credit markets. If the rate of monetary growth were raised with the specific objective of adding to the supply of funds in an attempt to keep interest rates down, the additional dollars in the spending stream would certainly work to raise average prices. The process of monetary inflation is widely understood by both savers and borrowers. Such action would generate expectations of further inflation on the part of both groups. The incentives of the marketplace, present and prospective, would unquestionably tend to increase borrowing and discourage saving and in all likelihood rates would increase.

"In the longer run, the way that monetary policy can contribute to a lower level of interest rates is through its role in maintaining a stable value for the dollar."[1]

The efficient flow of funds from savers to borrowers directly and through intermediaries does not come about without a price. This price, the rate of interest, represents a penalty to those who use some one else's money and a reward to those who save and risk their funds in loans and investments. In our own country this price has been driven to the highest level in three decades because of the pressure of the demand for funds. Last year there was a large deficit in the Federal budget requiring the Treasury to borrow funds from the public at a rate exceeding all peacetime records. State and local governments continued to borrow in near-record volume. Residential construction called for large mortgage financing. All of these, plus the usual business needs, competed for borrowings and drove interest rates upward.

And so, in the year 1959, total credit expanded by $60 billion. This figure was greater than the previous peacetime record of 1958. Mortgage debt, most of it for housing, increased by $19 billion—a record. Consumer credit outstanding rose about $6.5 billion, equaling the 1955 peak.

In appraising the results of last year, the facilitating roles of banking and of the Federal securities market stand out clearly. Commercial banks served mainly as intermediaries rather than as creators of new money. They obtained funds from savers in exchange for investment securities and then passed these funds on to borrowers. This flow from savers to banks to borrowers enabled the need for credit to be met without a dangerous increase in the money supply. The commercial banks did expand their loans, in fact by a record amount of almost $12 billion, but they raised most of these funds by selling Government securities from their portfolios to the nonbank public. The Federal securities market also played a greater role than in other recent years by facilitating the net borrowing of $11 billion by the Treasury and the selling of about $8 billion of Government securities by banks. Such an accomplishment is evidence of the responsiveness of nonbank investors to attractive rates of interest.

DECISIONMAKING OF HIGH QUALITY

So much for the role played by fiscal and monetary policy in creating a healthy business climate. But these two alone are not enough. As I observed at the outset, a third and essential member of the triumvirate is sound private decisionmaking. Steady consistent progress calls for decisions of the best quality that business executives and union officers can make. Their decisions, if sound, will do much to lengthen the period of prosperity that the country is now enjoying. "A business situation is no better than the quality of decisions that businessmen make," Dr. Winfield Riefler once remarked to me.

The quality of business decisions is important at all times, but especially so during prosperity. In short, the duration of the current expansion will be influenced by the quality of decisions now being made by business executives. I am talking about the heads of manufacturing, mining, and commerical enterprises, about farm managers and bankers—and about union officials, too. Unless their decisions reflect prudent judgment as well as a reasonably well-founded appraisal of present and future trends, executives, as well as workers and investors, will pay the penalty.

The problem, of course, is how to balance insufficient protection against too much; to achieve a proper compromise between caution and enterprise, between the safety of a strong cash position and the growth that borrowing makes possible. Proper balance requires that we not be overly cautious when times are bad, nor overly optimistic to the point of imprudence, when they are good; executives should risk neither too little nor too much, be willing to venture but still guard against unwarranted optimism.

At this point I would like to remind you of the case for decentralized decisionmaking. It is timely that this issue be debated because some of those who urge Government to overspend its income in order to supply gaps in the material well-being of the country also suggest curbing any resulting inflation by means of additional controls. Such controls embrace the rationing of scarce materials and goods; price, credit and capital controls; governmental wage setting; and even the assignment of people to jobs. In the past, it has not proven feasible to stop with just one of these controls alone. They are interrelated. I do not believe such a control harness, outside of wartime, is compatible either with the economic freedoms we cherish, or with initiative and efficiency over the long pull.

When centralized decisions are in error, the errors are big ones. Lord Keynes observed that "a democratic approach to public problems must stress the fact that economic totals are only aggregates of millions of parts which may differ from each other in more respects than they parallel each other. Mistakes made by individuals may offset each other but mistakes based on totals are likely to be aggregative and may be disastrous. It has been said about Nazi Germany that it was so well organized that it could only make major blunders. Unfortunately this danger is not confined to totalitarian states."[2]

The economic freedoms that Americans cherish are part of freedom of enterprise. The latter embraces freedom of choice in the securing of credit, in the selection of what

[1] Testimony before the Joint Economic Committee by Chairman Martin on behalf of the Board of Governors of the Federal Reserve System on Feb. 2, 1960.

[2] E. A. Goldenweiser, "Monetary Management" (New York: McGraw-Hill Book Co., Inc., 1949), pp. 2–3.

one wishes to buy, and in the seeking of jobs. The preservation of these freedoms, infinitely precious to all citizens, is a particular responsibility of those in the banking community.

To summarize what I have been trying to say about business decisionmaking, its decentralization ought to be defended stoutly. The burden of proof should be placed upon advocates of national planning whenever they suggest that decentralized decisionmaking be replaced by centralized determination by the government. Some central policymaking there must be, of course. One example is dealings with other nations; another is the regulation of the total supply of bank credit, for as Walter Bagehot pointed out almost a century ago in his classic description of the British money market, "money will not manage itself." But, in general, experience suggests that the allocation of credit, the negotiation of wages, and the setting of selling prices should be decentralized. The making of these business decisions calls for self-discipline and sound judgment. As Chairman Martin has said "The state of the Nation tomorrow—its progress and prosperity—rests with the decisions of today."

We Must Use Our Wealth

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. HARTKE. Mr. President, the Salem Democrat recently had a very excellent editorial which I would like to bring to the attention of my colleagues. This is the answer to those who wildly and demagogically characterize spending as something inherently evil. I believe this excellent editorial places this matter in proper perspective. I ask unanimous consent to have this editorial, entitled "We Must Use Our Wealth," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Salem Democrat, Apr. 20, 1960]

WE MUST USE OUR WEALTH

Several influential politicians, led by the President, have indicated in recent years an obsession about spending on the part of the Federal Government. The word has become anathema to those people. To produce—but not to spend—seems to have become their guiding philosophy. Some weeks ago we brought out the fact that the President himself has subscribed to the definition of a prosperous, well-balanced American society as one that produces material goods sufficient to satisfy the wants of the people.

This concern with spending is well-founded in part—we do not want to steer recklessly down the road to socialism, with its attendant loss of individualism. However, the term "spending" has been construed to cover nearly everything, including areas of public interest which will never be served except by governmental direction.

What face do we show to the nations of the world? It is one that looks with contentment at private well-being; and abiding concern with the comforts of life. A good economy, yes, but not necessarily what all would call a good civilization.

Author John Galbraith describes an American family which possesses modern conveniences, but uses them in a land neglectful of public needs. Senator J. WILLIAM FULBRIGHT, chairman of the Foreign Relations Committee, is keenly aware of the inseparability of domestic and foreign policy. He writes:

"A good economy is only a means to a good civilization (which) enhances the moral, spiritual and esthetic values that allow people to live with full satisfaction.

"President Eisenhower said not long ago that 'we grow only by investing more and producing more, not simply by spending more.' But the point surely is what we produce by our investment. Producing consumer goods is not necessarily beneficial. Investing in education or parks and playgrounds is not simply spending more. It is also investment, an investment in the quality, the skills, and the enlightenment of our people. The prestige and strength of the American people must be based on more than the capacity to produce consumer goods."

As the day approaches when we shall again consider politicians, their motives and philosophies (as best we can), we would do well to look behind the phrases and bywords to determine if we are seeking the proper objectives. It should not be a "kiss of death" that one be termed a spender; rather, we ought to learn what he is going to spend for. While a wary eye can still be trained on wild and reckless programs, there is nothing wrong with using our money in the right way. The President notwithstanding, there remains plenty of room to debate and consider using our money as well as getting it.

Joseph W. Childs

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. AYRES. Mr. Speaker, one of the most respected labor leaders, Mr. Joseph W. Childs, passed away this week. He was the type of man that was a credit to trade unionism.

The following editorial appearing in the Akron Beacon Journal on Tuesday, April 26, 1960, should be of interest to all citizens:

JOSEPH W. CHILDS

"A dedicated and sincere trade unionist and citizen who worked unceasingly for the benefit of other people. * * *"

This was Joseph W. Childs, as described by L. S. Buckmaster, whom Mr. Childs had been expected to succeed in September as president of the United Rubber Workers.

Big, genial Joe Childs was first of all a union man. But his devotion to the United Rubber Workers at local and international levels did not deter him from giving almost as much of his time and energies to community service. He served with distinction in city council; he helped UF campaigns; he was active in many other efforts. Whatever he could do to help his union members and his community, Joe Childs did, vigorously.

In everything in which he played a part, Mr. Childs was forceful and fair. Whether it was discussing a contract with employers across a conference table or evaluating UF agency budgets in a United Community Council committee meeting, Joe voiced his opinions clearly, honestly, as he saw the situation. There was never any question how he stood on any matter. One might disagree with him, but no one ever questioned his honesty or his integrity.

During World War II, Childs served his Government in many critical assignments. And although he walked with the great of politics and business, he never was anything but "Joe," the rubber worker.

Few men counted as many friends as did Joe Childs, everywhere in the country. And even those whom he might have termed his enemies, liked him and respected him.

The international presidency would have been an appropriate honor for Joe Childs, a deserved recognition of his tireless labors in behalf of his union and the union movement generally. Death at the age of 50, following a heart attack, deprived him of this reward. But the memory of his useful life and inspiring example will live on in the hearts of his family and friends.

Latin America and the Price of Coffee

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. JOHNSON of Texas. Mr. President, a cup of coffee is a weapon in the cold war between the free world and the Communist world.

That point is tellingly made in a recent dispatch to the Dallas (Tex.), Times Herald, written by John Harris, of the paper's Washington bureau.

Mr. Harris' article quotes Assistant Secretary of State Roy S. Rubottom as declaring that "The drop in coffee prices is a peril to the free world." Our Nation has a vital stake in the soundness of the Latin American economy—and we purchase 85 percent of the coffee we use from Latin American countries.

I ask unanimous consent that Mr. Harris' article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dallas (Tex.) Times-Herald, Apr. 17, 1960]

U.S. OFFICIALS GROW ANXIOUS OVER WORLD COFFEE PRICE DECLINE

(By John Harris)

Coffee is causing sleepless nights at the State Department.

The insomnia is induced by a plunge in the world price of coffee—an economic landslide that could throw our relations with Latin America into turmoil.

"The drop in coffee prices is a peril to the free world," Roy S. Rubottom, Assistant Secretary of State for Inter-American Affairs, said in a recent interview.

"Economic trouble in Latin America is an invitation to the Soviets to intensify their efforts at economic penetration of our hemisphere."

A cup of coffee generally costs a dime. Ten years ago it cost 5 cents. Yet during that same time the price of coffee has slumped 20 percent. The higher price per cup is explained by rising restaurant operation costs.

The overall price fall is blamed on overproduction, or "current imbalance between world production and consumption."

ONE-CENT DROP

What happens when the world price of coffee goes down, even slightly? A drop of

1-cent per pound means a loss to producing countries of $50 million per year.

This in turn means closed down plantations and unemployment in 14 nations across the Caribbean and South America.

Last year the United States purchased about 85 percent of its coffee from these nations. In volume, this amounted to 2,700 million pounds, an alltime record. In dollar value, these imports represent the lowest receipts to producing countries in 12 years.

This is where we, our jobs, and maybe our security, come in.

EARNING LOSS

With the price drop in coffee, Latin American earnings from coffee shipments to the United States have fallen from $1,400 million in 1954 to $975 million last year. As a result, Latin America hasn't got enough money to buy goods we make here.

But the standard of living is rising throughout Latin America. People want more and more things they don't make in their own countries.

Many Latin Americans are for the first time using modern appliances—many are wearing their first shoes. Huts and other living quarters are improving and education is on the march. The population is exploding.

BROUGHT FROM UNITED STATES

At last count, the coffee-producing countries purchased 20 percent of all products exported from the United States. They gave employment here to 370,000 persons. A total of 1,041 communities in the United States were directly engaged in commerce with these countries.

The $2,700 million worth of goods exported to the 14 coffee-growing nations included $630 million in heavy machinery, $517 million in vehicles, and $400 million in grain, vegetable, and animal products.

WEAK, WATERY

All of this has led to another complaint by coffee producers: The cup of coffee poured in the United States today just isn't as good as it used to be.

If it were better, it was suggested, the United States would be buying more coffee.

Sr. Miguel Angel Cordere, Jr., is president of the International Coffee Agreement, an organization interested in selling more coffee. He spoke recently at a meeting of coffee growers in Florida.

"If you were still enjoying the full-flavored cup of 10 years ago," he said wistfully, "you would have to import another 6 million bags."

Coffee experts claim that 2½ gallons of water should be used for each pound of coffee. But they said as much as 4 gallons are being used in the United States today, while the national average is 3 gallons.

A Most Extraordinary Teacher

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. RANDALL. Mr. Speaker, I have asked unanimous consent that some of my remarks be entered in the RECORD concerning a much out of the ordinary constituent, Mr. F. L. Stillions, of Blue Springs, Jackson County, Mo.

Mr. Stillions is a teacher by profession. He is not just an ordinary teacher, but one who is distinguished by having just completed 40 years of teaching in the public schools of Missouri; 25 years of which has been in continuous service in Blue Springs, Mo. Mr. Stillions further distinguished himself by being the first teacher in the entire area who insisted he continue in the teaching profession until he reached the mandatory retirement age of 70. Even more remarkable and in further distinguishing Mr. Stillions from so many others in his profession, he has never missed a day of regularly scheduled school during all these years.

Mr. Stillions was born on a small farm south of Palmyra, Mo., in 1890. He graduated from Palmyra High School and entered William Jewel College in Liberty, Mo. This is an institution of learning under the supervision of the Baptist church. While a student at William Jewel, he became a part-time pastor in Forrest City, Mo. In 1912 he was ordained as a Baptist minister. After his graduation from William Jewel College in 1913, he commenced his service as the pastor of the Blue Springs Baptist Church which he continued to serve for 17 years.

During the years of his early life it should be remembered this great man served the people of his community as the pastor of their church and carried out an extensive building program in the construction of a new church. Yet not only was he a good minister, but during all these same years he was a teacher in the schools—and not simply was he a teacher of the academic subjects, but he also served as coach of both the boys' and girls' basketball teams. He will be particularly remembered for the fact that he provided transportation for the teams in his own car and at his own personal expense so that the teams he coached might enter competitive sports in other towns. For 2 consecutive years, 1935–36, his basketball team won the championship award.

Then in the year 1947 when most people of his age—age 57—at that time are thinking of retiring, Mr. Stillions entered the University of Kansas City and completed work for his master's degree.

In his 40 years as a teacher, Mr. Stillions spent 27 years as a high school principal. It is refreshing to note that Mr. Stillions was not a specialist in that he confined his teaching activities to one bracket of subjects, but was a very versatile teacher in that he taught Latin, English history, algebra, geometry, and even chemistry in the field of the sciences.

When Mr. Stillion retires at the end of the current school year he will have the unusual distinction of having been teacher to three generations within one family, Mrs. Raymond W. (Maurine) Wyatt, her son, R. W. Wyatt, and her grandson, Donnie Wyatt, now a senior who will graduate this year.

Probably no other man has had such a profound effect on the lives of so many people in the Blue Springs community. As teacher, minister, husband, and father, he has given his unselfish devotion to each status. His efforts have helped thousands of young people to a better life and his influence has thus extended far beyond the community of Blue Springs.

In the presentation which will be made to Mr. Stillions, there will be the Latin inscription, "Exgisti monumentum aere perennius," meaning "You have completed a monument more enduring than bronze." Nothing could be more fitting to describe the life of this great teacher.

Wayne Gard Writes of Chisum, Andy Adams, Goodnight, and Other Famed Texans in Cowboy Hall of Fame

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. YARBOROUGH. Mr. President, nine famed Texans who braved severe weather and wild Indians to bring civilization to our Republic and State have been chosen for inclusion in the National Cowboy Hall of Fame at Oklahoma City, which was chartered by the 85th Congress.

This distinguished and unforgettable group includes Oliver Loving, regarded as dean of the trail drivers; Dan Waggoner, founder of the famed Waggoner Three-D Ranch, second in size only to the King Ranch; Sam Houston, our incomparable soldier-statesman; Stephen F. Austin, who led our main body settlers into Texas; and famed ranchers and cowboys Andy Adams, the cowboy writer, John S. Chisum, of Chisum Trail fame, Charles Goodnight of Palo Duro Canyon, Miffin Kennedy and Richard King of King Ranch.

Texas is the greatest ranching State in the Union. Its famed longhorns were pointed north and west to graze ranges from the Dakotas to Washington to California.

Mr. President, the current issue of the Progressive Farmer contains an excellent article on this subject written by Mr. Wayne Gard, one of the ablest writers of the ranch country. I ask unanimous consent to have printed in the Appendix of the RECORD this article entitled: "Texans Ride to Cowboy Fame."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXANS RIDE TO COWBOY FAME

Honors are in the making for some of those wind-bitten Texas cowmen who braved parching droughts, chilling blizzards, and Comanche scalpers to grow beef on the plains. Nine rugged Texans are among the 84 chosen thus far for inclusion in the Cowboy Hall of Fame. The first major unit of this eventual $5 million shrine and museum is under construction at Oklahoma City and should be completed soon.

No one knew better the hazards of the cattleman's frontier than one of the nine Texans, sturdy Oliver Loving, who risked and lost his life in taming it. Loving, who has been called the dean of the trail drivers, was born in Kentucky about 1812. In 1845 he moved to Texas, settling first in Lamar County. The next year he moved south

into Collin County, where he farmed, bought and sold livestock, and freighted from Houston and Shreveport.

Looking for a less crowded range, Loving trailed his herd west in 1855 and settled in the hills of Palo Pinto County. He found good grass, but profitable markets were far away. In 1858 he joined with a Parker County neighbor, John Durkee, for a drive to Illinois. The two brought their herds together in Parker County, near the Tarrant line. They trailed northeast to Preston, crossed the Red River, and headed up the Shawnee Trail. After crossing the Mississippi River at Quincy, they sold their steers at good prices.

In August 1860, Loving and three associates gathered about 3,000 steers on the upper Brazos and trailed them north through the Indian teritory and into Kansas. They followed the Arkansas River west into Colorado and wintered their herd near Pueblo. In the spring they trailed north to Denver, where they readily sold their steers. When Loving arrived home, after being gone a year, he found that because of Indian raids, his family had moved into Weatherford.

During the Civil War, Loving trailed beef herds east to feed the Confederate forces. After the war, in addition to his cattle raising, he ran a small country store on the Belknap road. In 1866 he joined a younger frontiersman, Illinois-born Charles Goodnight, in a drive to New Mexico. Merging their herds with 2,000 head in all, they followed the abandoned Butterfield Trail to Horsehead Crossing, then turned up the Pecos Valley. After selling their steers at Fort Sumner, Loving took several hundred cows and calves on to Denver and sold them there.

In 1867 Loving and Goodnight again trailed beeves to New Mexico. Along the Pecos, Loving and Bill Wilson rode on ahead of the herd. On their third day out, they were attacked by a band of several hundred Comanches. They took refuge under a bank of the stream, where they were hidden by smartweeds and scrub oak. But in the evening the Indians found them. As the cowmen prepared to defend themselves, one of the savages put a bullet through the wrist of Loving and into his side. That night Loving, weak from the loss of blood, insisted that Wilson leave him and try to escape and warn the rest of the outfit.

Wilson made his escape; but before the other Texans could reach the site of the fight, a party of Mexicans found Loving and took him on to Fort Sumner. There he lingered for several weeks before he died. His last request was: "Take me back to Texas. Don't leave me in foreign soil." His body was packed in charcoal and hauled back to Weatherford for burial.

Another hardy west Texas cowman chosen for the Cowboy Hall of Fame is Dan Waggoner, founder of the famed Waggoner Ranch, now the second largest in Texas. Born in Tennessee in 1828, Dan was brought to Texas in the middle 1840's when his family settled in Hopkins County.

His father died in 1848; and about 2 years later tall, blue-eyed Dan Waggoner bought 6 horses and 242 heads of Longhorns and located on Denton Creek, in Wise County, near the frontier town of Decatur. In 1851 he increased his herd and bought 15,000 acres near Cactus Hill, about 18 miles west of Decatur.

Waggoner prospered and kept adding to his pastures and to his herds. In 1870, with his son Tom and a few picked hands, he trailed a herd from the Little Wichita to Kansas and came home with $55,000 in his saddlebags. This enabled him to buy more Longhorns at $8 a head and to add to his land. Soon he had pastures in Wilbarger, Foard, Wichita, Baylor, Archer, and Knox Counties.

Once someone asked Waggoner if he intended to buy all the ranchland in north Texas. "No," he answered, "I don't aim to buy it all—just what joins me."

Waggoner brought in Hereford and Shorthorn bulls to upgrade his cattle and made his Three-D brand one of the most famous in the Southwest. He died in Colorado in 1904.

The heirs of Waggoner, further enriched by the discovery of oil on the ranch, continued the breeding of fine stock. The pride of the ranch today is one of the world's most famous quarter horse stallions, Poco Bueno.

Other pioneer Texans chosen for honor in the Cowboy Hall of Fame are Andy Adams, Stephen F. Austin, John S. Chisum, Charles Goodnight, Sam Houston, Miffin Kennedy, and Richard King. And for other notable cowmen of the State the door isn't closed.

TVA Continues To Prove Its Value as a National Asset

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. EVINS. Mr. Speaker, the TVA is a great national asset and over the years it has made many contributions to the well-being of all sections of the United States and in the national interest. The critics of this great agency are fond of pointing out the many ways in which the TVA has and is benefiting the region in which it operates but they are very prone to overlook and disregard the many great contributions the TVA has made for all of the people of the United States.

Even during the past few years when the TVA has been the subject of the most bitter controversies and attacks the TVA has continued to serve the national interest in many ways. The TVPPA news recently summarized some of the more recent contributions of the TVA to the entire Nation and specifically to consumers of electricity everywhere. Because these national contributions are so often overlooked when we speak of the TVA, under unanimous consent, I include this excellent article in the Appendix of the RECORD.

The article follows:

TVA PROVES TO BE A NATIONAL ASSET—UNTOLD BENEFITS

For years TVA's friends have said TVA is a national asset, with benefits from its programs and policies spread throughout the Nation.

For example, they point to TVA's low electric rates—and the resulting high use of electricity—as a pattern from which private power companies have both learned and profited. Private power companies nearest the Tennessee Valley have made the sharpest cuts in retail rates—thus benefiting customers served by these companies—and yet have increased their common stock earnings twice as fast as the national average for power companies—thus benefiting power company stockholders. But the power companies bitterly oppose TVA.

On electric heating, some 20 percent of all consumers served by the municipal and rural cooperative distributors of TVA power heat their homes electrically. It is striking that the first National Electric Heating Exposition, being held this month in Chicago, comes more than a decade after electric heating became popular in the Tennessee Valley. Private power companies are, somewhat belatedly, jumping on the bandwagon; they are reducing electric rates now, to encourage electric heat. They are learning and profiting from the example set by the local distributors of TVA power, though the lesson has taken quite a while to sink in. It was not too many years ago that power companies were sarcastically critical of the idea of heating an entire home with electricity. They let the Tennessee Valley, and the Pacific Northwest, do the pioneering.

IDENTICAL BIDS

Last month the Nation saw another example of how TVA benefits electric consumers throughout the Nation, and a Federal grand jury in Philadelphia benefits the private power companies, returned a series of indictments charging numerous manufacturers of electrical equipment with violations of the Sherman Antitrust Act "in connection with the sale and distribution" of several items of electrical equipment.

The St. Louis Post-Dispatch, in an editorial on February 19, said, "everyone who pays taxes on electricity bills is an invisible party at interest" in the case.

"For bringing into the open the phenomenon of identical bids in the sale of many items of electrical equipment, TVA is largely responsible," the editorial stated.

It was TVA which made public the identical bids received from many manufacturers. It was TVA and several publicly owned electric systems in the Tennessee Valley which presented testimony before Senator KEFAUVER'S Senate subcommittee probing identical bids. Yet many other Federal agencies, State and local governmental agencies throughout the Nation, private power companies and other private businesses were allegedly subjected to the same identical bidding practices. Clearly TVA's action in first announcing identical bids was in the national interest.

Indictments announced thus far deal with products whose annual sales total about a quarter of a billion dollars a year. In the concise wording of a Chattanooga Times editorial, "This isn't peanuts." And a Justice Department official said: "These indictments and civil actions are the first in a series of proceedings arising out of the Department's extensive grand jury investigation into all phases of the heavy electrical equipment industry. The investigation is continuing into other phases which involve products of significance to industry and national defense."

A RELATED MATTER

An earlier TVA action which was widely criticized at the time—the purchase of foreign-made equipment—is not unrelated to the question of identical bids. Concerning its purchase of a 500,000-kilowatt turbogenerator last year from an English firm, TVA said "this history of price increases by the only U.S. suppliers * * * led TVA to invite bids from qualified foreign manufacturers as well as domestic ones." TVA at that time said prices charged by American turbogenerator manufacturers had gone up 50 percent since 1951, compared with a 5-percent increase in average wholesale cost of all commodities. The relationship between TVA's acceptance of foreign bids and the matter of identical bids from U.S. firms has now been publicly established.

Since TVA's award of a contract to the English firm, prices of many items of electrical equipment have been reduced by American manufacturers. Arnold R. Jones, TVA board member, said last fall that "every utility in the country is buying cheaper because of what we did. There has been a reduction of 17 percent in purchase costs since our action." This is another case where TVA's policies—though arousing controversy and appearing to be politically unwise—have shown to be in the national interest, and have benefited TVA's bitter foes, the private power companies.

WHO IS BUSINESS MANAGED?

Private power companies—proudly and expensively advertised as "business managed"—did not make public complaint about identical bids, or high prices for electrical equipment. It was the public power agencies which brought this to the public's attention. The result: Every electric consumer in the Nation should benefit, because of lower prices which utilities are now paying for key items of equipment. Perhaps the publicly owned systems are more business managed than the private companies. As the Nashville Tennessean editorialized: "Once again, TVA has saved American power users—both public and private—a considerable wad of money. Once again it has demonstrated that an organization is not necessarily cursed because it bears the name public. And that the suffix, private, is not invariably sacred."

But Public Service magazine—an independently owned and managed publication which sharply criticizes TVA and local public power systems at every turn—says TVA's newly acquired revenue bond financing authority puts TVA on the horns of a dilemma. Says this anti-TVA magazine: Revenue bond financing may mean that TVA "must begin to behave like a private corporation, increase its rates * * *" and so forth.

Does this mean that an agency must increase its rates in order "to behave like a private corporation?" The Philadelphia grand jury indictments charge, among other things, that various agencies "have been forced to pay high, artificially fixed prices" for elctrical equipment because of the alleged conspiracies among manufacturers. Competitive bidding is supposed to reflect competitive enterprise at work. Too, there is evidence that this definition of behaving like a private corporation and increasing rates might fit many private power companies, which have increased rates by nearly half a billion dollars in the past 10 years, and have ben granted 515 of the 557 rate boosts applied for since 1946.

TVA may indeed have to raise its rates. But it will do so only after having made every effort to hold its costs down only after courageously attacking the policy of identical bids after buying coal on bid basis at the lowest possible cost after building its projects below cost estimates with a dedication to low rates and economical operation that would well befit any private corporation.

If behaving "like a private corporation" just means increasing its rates, time and again, as many regulated private utilities do, it is safe to say that TVA will not do so. Twenty-six years of low-cost power is sufficient evidence to the contrary. But if behaving "like a private corporation" means unstinted devotion to the lowest operating costs, to keep the price of electricity as low as possible for the greatest consumer benefit, then TVA has been behaving like a private corporation for more than a quarter of a century. In fact, TVA has set an example which the Nation's private power companies might well follow in their "business-managed" operations. One would think that the power companies would actually thank TVA for saving them money on their equipment purchases, and on other matters. But somehow it doesn't seem likely.

U.S. Education for 4,000 Africans

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. SALTONSTALL. Mr. President, recently Mr. Harold C. Case, the president of Boston University, proposed that this country's colleges and universities each invite two African students to study in the United States, annually.

Mr. Case recently returned from a trip to the African continent; and his suggestion both recognizes the great emergence of the African peoples politically and socially, with the resulting need for education, and offers a counter to the plans of the Soviet Union for a so-called free university for students from the underdeveloped areas.

A recent article, in the New York Herald Tribune, by Education Editor Terry Ferrer, reports on President Case's idea; and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASKS U.S. EDUCATION FOR 4,000 AFRICANS

(By Terry Ferrer)

Dr. Harold C. Case, president of Boston University, yesterday proposed that every one of the 2,000 colleges and universities in this country invite two African students to study here beginning in 1961. The 4,000 Negro students would receive free tuition, room, and board from the colleges, and their travel and incidental expenses would be paid by their own governments.

Dr. Case, who recently returned from a 2-month visit to Africa, said in an interview here that "next to nationalism, the greatest urge in Africa now is for education. I am firmly convinced that whoever designs African education will design the continent's political future as well."

Later this month, Dr. Case will present his proposal to the State Department for its approval. He will also ask the American Council on Education, the Nation's largest higher education association, with more than 1,000 members, to serve as a central clearinghouse on the project. The Africans would study at either the undergraduate or graduate level, Dr. Case said.

Two American colleges, Boston University and Dillard University—a Negro institution in New Orleans—have already made plans to take two African Negroes each beginning this fall.

Dr. Case pointed to the Moscow announcement on February 23 that the Soviet Union would open next fall a "University of Friendship of People" for the free education of 4,000 African, Asian, and Latin American students. "Under my proposal," he said, "we would steal from Russia any propaganda value its new university might have."

It is imperative, Dr. Case said, that American education take a responsibility now for African higher education so that the new African nations "do not flounder as they go into independence, or enter the Soviet bloc of nations."

The need for higher education in Africa is evidenced, he said, by the fact that in the whole of the Belgian Congo, which becomes independent next June, there are only 18 known Negro college graduates. In all of the countries he visited, the number of college graduates "is so low as to be negligible," he said.

Laws Alone Can't Assure Rights

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent I insert in the Appendix of the RECORD an editorial, "Laws Alone Can't Assure Rights," that appeared in the Denver Post, Denver Colo., on Monday, April 25, 1960:

Passage by Congress of the new civil rights bill, which is only the second piece of civil rights legislation to be enacted since the post-Civil War period, was an important accomplishment.

During the 2 months devoted to consideration of the bill, southern Members won some concessions. However, the mood of the country, as reflected in the mood of the majorities in both Houses, required a strengthening of measures relating to Negro voting rights and the punishment of persons who use bombs in racial disputes or defy court desegregation orders.

The bill, as passed, meets those requirements.

Southerners who fought the proposal at every turn concentrated on trying to keep it as mild as possible. They fully understood that Speaker of the House SAM RAYBURN and Senate Democratic Leader LYNDON JOHNSON, because of their responsibilities to the national Democratic organization, would have to produce a new law of some kind.

As realists in politics, RAYBURN and JOHNSON performed their duties well. Without their leadership there would have been no new enactment.

How much the 1960 civil rights measure will accomplish remains to be seen. Certainly, no phenomenal results are to be expected immediately for several reasons:

1. Efforts by the Department of Justice and the Federal courts to put the new measures into effect will be contested by lawyers for the Southern States every step of the way. Provisions of the new law will have to go through the U.S. Supreme Court for testing. This will take time.

2. Federal courts and Federal referees, in protecting the voting rights of Negroes, will have to be guided by State laws relating to voter eligibility, and some of these laws have been ingeniously drawn to prevent any but the better-educated Negroes from qualifying.

3. The strengthening of the legal rights of Negroes to the ballot may not mean much in areas of the Deep South where fears of possible economic reprisals will still be used to keep Negroes from the polls.

A man is not going to be eager to try to exercise his rights if he knows that his act of voting may cost him the job he holds under a white employer, cost his wife her job as a maid in a white home or result in the calling of his farm loan by the local bank.

The use of sanctions of this kind are anticipated by both whites and Negroes in the South. J. M. Brooks, of the National Association for the Advancement of Colored People in Richmond, Va., was quoted in a newspaper recently as saying:

"A Negro will come in to register and the registrar will say, 'Does Mr. Jones know you're trying to vote?' Well, Mr. Jones owns the store and the Negro owes him a bill, so he forgets about registering and goes back home."

This type of suppression of Negro rights cannot be cured miraculously by passing a law in Congress. The law will help. It would be a mistake to expect it do anything more.

Sniffing Out Dope Pushers

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. DODD. Mr. President, I would like to bring to the attention of my colleagues in the Senate a column written by Ruth Montgomery which appeared in the April 14 edition of the New York Journal-American.

The problem of dope traffic coming into this country continues to be a serious one, and I was pleased to read in Miss Montgomery's column that Narcotics Commissioners Harry J. Anslinger has appointed Mr. Sam Pryor as his special adviser on how to catch smugglers bringing heroin into this country on our airlines.

Mr. Pryor is a resident of my home State and has long been interested in the narcotics problem. He is an outstanding American businessman who has dedicated much of his time to helping make this country a better place in which to live.

I am certain that he will do a great job for our Narcotics Commissioner.

I also would like to mention that Commissioner Anslinger deserves a great deal of credit for his efforts in fighting the narcotics problem in this country. Commissioner Anslinger has done an excellent job despite the fact that he has a limited staff to deal with such a vital problem.

I ask unanimous consent that Miss Montgomery's column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SNIFFING OUT DOPE PUSHERS
(By Ruth Montgomery)

WASHINGTON.—A statue may someday be erected to the first dog that can develop a talent for sniffing out illegal heroin.

Man's best friend has already proved so adept at "pointing" opium that America has virtually rid itself of the vile traffic in that habit-forming drug.

Narcotics Commissioner H. J. Anslinger discloses that German shepherd dogs, especially trained for this unique service, have become so proficient that they have "just about cleaned out New York and San Francisco Chinatowns of opium—and cats, as well."

These heroic shepherds, who are performing similar chores in Cairo and other world centers of narcotics traffic, have such a delicate nose for opium that they can even point to it in locked, steel safes.

So far the Narcotics Bureau has been unsuccessful in training dogs to track the scent of heroin, which is now the preferred drug of America's 60,000 addicts.

The problem is an urgent one, because most of the heroin that illegally enters America originates in Red China, and 65 percent of our addicts are under 30 years of age. In fact, nearly 12 percent are teenagers.

The jet age is a boon to international gangsters who dominate the illicit narcotics field. A slow boat from China is no longer good enough for Maffia mobsters and other organized crime syndicates, who smuggle dope into this country to lower our morals and our morale.

Virtually all of the international traffic has now shifted from ships to airplanes, and for that reason Anslinger has appointed Sam Pryor, executive vice president of Pan American World Airways, as his special adviser on how to trip up the airborne smugglers.

"Pryor is a Godsend to us in this jet age," Anslinger exclaimed. "He travels all over the world at least twice a year, and knows every trick of the trade when it comes to customers or airline personnel trying to slip contraband past customs officials. This knowledge is desperately important to us, when you realize that a smuggler flying out of Hongkong can now reach San Francisco within hours."

Pryor, a director of the Boys' Clubs of America, became interested in the narcotics problem when he saw "normal boys turned into animals" by the use of dope.

"I have five children and eight grandchildren," he mused, "so I can afford to get mixed up in this risky business if it's going to make a safer world for them. It's a horrible situation when teenagers, hopped up on heroin, commit major crimes—not just juvenile misdemeanors."

Anslinger does a slow burn at our British cousins, who refuse to let his agents help clean up the narcotics situation in Hongkong. He points out that this oriental city just outside the bamboo curtail is the chief clearing house for the China-grown narcotics that illegally enter America through Los Angeles and San Francisco.

The British Home Office vigorously denied it when Anslinger recently asserted that the city of Hongkong has as many drug addicts as our 50 United States combined. Suddenly it performed an abrupt about-face.

Great Britain has now issued a white paper officially admitting that Hongkong houses from 150,000 to 250,000 heroin addicts. America has only 60,000, thanks to Anslinger and his dedicated agents.

Skin Deep Liberals

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. MICHEL. Mr. Speaker, I ask unanimous consent that at the following editorial entitled "Skin Deep Liberals" be printed in the Appendix of the RECORD.

[From the Peoria Journal Star, Apr. 26, 1960]

SKIN DEEP LIBERALS

Once upon a time, a political liberal was a figure of scorn and a target of abuse. He needed the courage of his convictions, because there were no other rewards. This made him, deservedly, a noble figure.

But how times have changed.

For 30 years, especially in the big urban centers, the banner of "liberalism" has been a passport to publicity, public acclaim, profit, and public office.

It is hardly strange that a new, less noble class of self-styled "liberals" has grown up—people eager to cash in on the old labels and the old slogans.

These are the folks whose humanitarianism is only skin deep—those who see the suffering of people as something to feed on politically.

These are the folks who defend loudly all minorities that form cohesive voting blocs, while using vicious, twisted, and prejudicial techniques to attack the economic minority and inflame people against that portion of American life.

These are the folks eager to guarantee the voting rights of colored folks in the South, but blind to vicious machine politics in their own northern cities.

These are the ones eager to rhetorically rescue the "captive peoples" in other lands, but who approve legislatively of making an estimated 5 million Americans "captive members" of labor unions.

These are the folks who shout loud and long about working hours being made short by law while their own office staffs toil 14 hours a day, and capitol employees as much as 16 hours a day with no extra pay.

They love mankind but don't speak to their neighbors.

Such folks would rather have gimmick laws with fancy labels than real solutions to human problems—the real solutions would rob them of their political stock in trade.

And so the positions are reversed. The self-styled liberals, cashing in on the courage of their predecessors, are living it up, popular, fat, and sassy.

The man who needs the courage of his convictions today—who now faces scorn and abuse—is that man who wants to get down from the clouds of emotional slogans and oratory, and get to working on the homely details that can make some of these things actually work.

Cartoons

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. MARTIN. Mr. President, every 4 years our national election brings to the fore many characteristics appropo of American life but none appears more solidly and remains before the public more firmly than the cartoonist. Within the next 6 months, I am sure all of our political colleagues with whom we agree or disagree will serve as fodder for the cartoonist.

Recently there appeared in the magazine, Art in America, a description devoted to the American comic scene of the past 75 years prepared by Walt Kelly the creator of "Pogo." Mr. Kelly, former president of the National Cartoonists Society, says that political criticism has somehow come to be less interesting to the popular cartoonist here than social comment.

I ask unanimous consent to have printed in the Appendix of the RECORD

Mr. Kelly's article for the reason that it describes what has made the cartoonist tick since he became an accepted part of American political and social life.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARTOONS

(By Walt Kelly)

During the past 75 years American comic drawing has changed from the solidly executed work of the academician to the rapidly sketched portrayal of an idea that marks the efforts of our most recent cartoonists. It is important that throughout this change the idea has been the motivating factor behind all of the work. The difference lies in the conception of the artist as to which is more important: elaborate and solid construction of the vehicle for the idea, or quick communication to the readers.

Insofar as the idea itself is concerned, the cartoonist differs not at all from other men who bend to the steady storm of life. Badgered by tax collectors, he may issue a scream of protest involving the use of vultures; beset by family he might try a grim delineation of those ordinarily well-loved; children, wives, parents, even in-laws. He might find the social whirl too much for his sensitivity and attempt scathing line indictments of the newly rich, the cocktail set, or toothy people bearing skis and tennis racquets. Recognizing traits of snobbishness in these, his own reactions, he smites himself mightily hip and thigh in an orgy of self-flagellation, a cleansing action which makes him feel that he is entitled to take on his neighbor again.

Political criticism has somehow come to be less interesting to the popular cartoonist here than social comment. The man today is more amused by behavior patterns. This does not necessarily mean that he is afraid, or could not possibly find a market for political cartoons; it is just that he has learned through the last century that we are equally guilty and that the road to perfection probably is not a strictly partisan road. In this, he reflects his times.

Such recognition of participation in ridiculous and incongruous crimes both large and small against humanity is probably the main impulse behind the work of all important cartoonists. Whether the man releases his emotional or intellectual steam through a humorous drawing or a strongly composed blow between the eyes matters little. He is still making comment, sharp, abrupt, unmistakable, and certainly as direct as he possibly can.

Today the cartoonist tries to capture the idea quickly, to fling it down and render it to his readers alive and full of fight. Yesterday perhaps we lost a little life by belaboring the drawing with a weapon known as the crosshatch to a point where the idea became obscure while the drawing had acquired some of the noble solidity of a Roman arch.

Picking at random a few innocent souls to serve as milestones, we find that one of the earliest men, A. B. Frost, a genuine American product, was well enough grounded in drawing to please even the exacting British. Lewis Carroll and his publishers (Macmillan) were satisfied with Mr. Frost's illustrations for "Rhyme? And Reason?" when the American drew them in place of the preferred Englishman, Crane. But Frost, with his ability to breathe life into animals, as he did for Uncle Remus, drew carefully executed, yet lively, characters for the British. This test was more strict than we can presently imagine, for the English have always excelled in the academic side of drawing.

As we pass gingerly by the waiting figure of Thomas Nast, with a gentle nod of recognition, we next see before us the very important Art Young, who in the early part of this century was a political cartoonist of renown. His background was firm and his drawings solidly conceived. His learned caricature of form made drawing look easy. He helped clear the air by demonstrating that the idea had to be clearly stated.

It must be admitted that the American is always self-conscious in the presence of the Holy Grail as such and that our tastes in high art have developed slowly. But let us also concede that there has been steady progress here toward the simple line and the direct idea. Any bird-walk through the past of cartooning history is an arbitrary matter of luck and memory. What we remember we can identify, but this is also a way of judgment. Therefore, we can skip blithely by the Charles Dana Gibson group, having passed Nast at full gallop, and we find after Young, or at about the same time, the towering figure of T. S. Sullivant, probably the greatest caricaturist of animals of all time. His reduction of everything to absurdity in line and mass reminds the bemused idolator of the work of Frank Lloyd Wright, who insisted that the monuments to his intelligence be solidly grounded and in conformity with the terrain. It would have taken a bulldozer to upset one of Sullivant's mice.

Sullivant, like a good many others, was encouraged in his quest for the beauty of simplification by a master of line, Fred Cooper, who as artist and editor (he is also a type designer) served the old Life magazine as a wise and gentle shepherd. A result of this man's influence can certainly be seen in the increasing tendency toward the single, mighty line of the early New Yorker men.

Here, Peter Arno comes immediately to mind. There are some who insist that he has been this country's greatest cartoonist. He is, for sure, one of the greatest manipulators of the straight line. His work takes on the glow of high art at times. All cartoonists are proud of this man's work. Another practitioner of the straight line is George Price. He has a single central idea, confusion, and he expresses it as no one else ever did. He thinks so much of the straight line that, you may have noticed, at times he uses two at once to get from point to point.

There are some, including Price himself, who disclaim Thurber as a cartoonist. They are all wrong. Art Young's simplicity and caricatured form, feeling for mass, all have echoes in Thurber's work. Just look at Thurber's monks drawn for a piece by Alexander Woollcott, the late early American primitive. It was one of the best things Mr. Woollcott was ever connected with.

CEM, called Charlie Martin by his friends, is a little touchy about being considered to have a style. Despite his protests, his ideas and the execution of them form a style. Always interesting, always clearly presented, Martin's work is a great contribution to clear thinking.

The men mentioned have mostly been "panel" artists; that is, they draw single pictures. Those of us who put things in a row with balloons have been influenced by the gentle quiet of a couple of masters. George Herriman brought poetry and a love of fantasy to the comic-strip business through "Krazy Kat," and his drawing was simplicity itself; David Crockett Johnson, when he did "Barnaby," also helped spring a lot of cartoonists out of the stereotype of the syndicated comic strip. "Pogo" and Charles Schulz's "Peanuts" both owe much to the distinguished spadework of both Harriman and Johnson.

Robert Osborne, with his imagery and the symbolic terrorism of Blake, is a result of the trend toward the uncomplicated drawing. He is in a class by himself, though advertising art directors who get their cousins to imitate styles at cut rates, are not yet aware of the difference between gold and dross.

While crowds of new men are coming forward today, the cartoonists we've mentioned are getting a little short of wind, legs are going, and the new rookies look very fast. These new men, still hewing to the line and using the idea as a blunt weapon, are close to the recent European tradition (Where Steinberg properly belongs; his background, training, and taste are continental rather than American). As we paunchier members of the club were not as academic as our turn-of-the-century predecessors, so these new men are not as academic as we.

Jules Feiffer, one of the very best of the younger men, has so many ideas and is such a prolific writer of material that he has trouble finishing one drawing before he plunges into the next. Yet, his work is simple and unmistakable as to meaning.

One notable cartoon by an outstanding new panel man is the drawing of two prisoners chained in a dungeon. Shel Silverstein, the cartoonist, has said that he has been amazed at the inquiry directed toward him about this particular cartoon. (I must admit I felt it represented the great spirit of American optimism.) After being psychoanalyzed by friend and stranger alike, Shel said wearily, "I just did it because I thought it was a funny idea." He's put his finger on the aim of the cartoonist: to be funny, to be direct, to get the idea across quickly; these duties comprise our aim, and we can"t help it if the unreal is real and the tragic is comic.

Liberty and My Stake in It

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. AVERY. Mr. Speaker, I wish to direct the special attention of the Members of Congress to the award-winning Farm Bureau essay written by Mrs. John Moyer of Hamlin, Kans. In my opinion, Mrs. Moyer is to be highly commended for her most thought-provoking essay. The essay contains food for thought for everyone.

"Liberty is not inherited, but must be rewon by each generation." My husband wrote this quotation on our kitchen blackboard many years ago and since then it has held a prominent place in my life. I do not know to whom to credit the idea, but I do know that it gives a great purpose to my thoughts and activities.

As I go about my daily kitchen chores, I often glance at the quotation. Sometimes the words cause me to pause in my work and look out to the fields and pastures and hills. As I look at the beautiful and peaceful scene and breathe deeply of the pure fresh air, a feeling of pride and exhilaration comes to me.

How I love the peaceful farm scene and the little village that nestles near our big hill, just a few blocks from my own doorstep. Often I rededicate myself to be a steward of all this, a much better steward than I have been in the past.

I can feel this responsibility of keeping America's way of life, these results of liberty, as directed to me and only to me. As Smoky the bear says, "Only you can stop a forest fire," so my conscience tells me "Only you can keep this liberty."

Liberty? Oh, yes—That is what I am to preserve. You ask, "What are the facts about liberty and what is your stake in it?"

I answer you:

Liberty is freedom to determine one's own actions insofar as it does not interfere with others also determining their own actions.

But I cannot say "I want freedom of religion" and never go near the house of God, nor work with His people.

I cannot say, "I want fine statesmen," yet never go near the voting polls, nor inform myself on the needs of the offices and the qualifications of the candidates.

I cannot say, "I want my children to have the best education possible," yet never visit my schools, nor talk with the teachers and administrators.

I cannot say, "I want better laws," yet never write nor talk to my Congressman.

I cannot say, "I want law enforcement," then not concern myself with the laws and abide my them.

I cannot say, "I want liberty," and never give of myself to have it. The time and talents I have I must share where and when I can to make a better community and world. I must inform myself by my reading those articles, listening to and viewing those programs, and associating with those people who will give me local, national and world conditions, instead of only entertainment.

As Smoky would put it and my own conscience tells me, "Only I can keep this liberty."

Lack of Voting Rights in the District of Columbia

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. HARTKE. Mr. President, the longtime concern of many Members of Congress with the unfair and unhappy state of democracy in the Nation's Capital has become a national cause. Many community leaders and many newspapers are taking up the campaign to gain for citizens of Washington the basic right of all citizens—the right to vote.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis News commenting on the serious lack of voting rights in the District of Columbia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis News, Apr. 19, 1960]

OUR VOTELESS CAPITAL

It is an indictment of our democracy that residents of the city of Washington not only are denied home rule but even of the right to vote.

The citizens of Moscow enjoy the privilege of the ballot not available to those in our National Capital.

The Senate finally has approved a constitutional amendment which would give District of Columbia residents the right to vote for President, Vice President, and Representatives in Congress. The House has a similar proposal pending.

They should be rectified and expedited to passage. So also should legislation giving Washington its own city government, leaving Federal authority only in respect to Federal property and agencies located there.

We suspect that it is racial bias, more than anything else, which has held back this enfranchisement and home rule in past congressional controversies on the subject. If so, even more discredit is reflected on our democratic processes.

Our National Capital should be a showcase of freedom, not a symbol of discrimination.

Danger Signals

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, the shipyard strike in eight of the east coast shipyards is now in its 98th day. Very little progress has been reported up to date and this costly strike continues. The administration has continued a policy of complete neutrality. This type of policy keeps the administration in a position where it does not have to make decisions. It has a rather devastating effect on the results of the strike, however.

A very well written editorial appeared in the Quincy Patriot Ledger on April 27, 1960, entitled "Danger Signals." It points up the grave concern not only of the editorial writer, but it is an accurate appraisal of the feeling of all the people of the south shore area of Massachusetts. For the information of the Members of Congress, I am including a copy of the editorial:

DANGER SIGNALS

The Fore River Shipyard strike is getting to be more than a dispute between management and labor.

Danger signals are up. The strike is beginning to pose the question whether the South Shore's biggest industry will remain on its feet.

The strike is breaking up the Fore River labor force. So many union men have found jobs elsewhere that it seems probable that the company will permanently lose some valuable personnel.

The announcement that at least 50 striking workers have been hired at the Portsmouth, N.H., Naval Shipyard, and that there are 200 openings there, is the latest warning of what is happening to the working force.

The yard's ability to compete is being hurt in another way.

The Navy contract for the first nuclear-powered surface warship gave Fore River an invaluable headstart in this class of work. We hoped the experience would give it a competitive advantage for years. But the nuclear cruiser *Long Beach* remains unfinished as the strike continues. Unless there is a settlement the potential advantage may well be lost.

Relations between Fore River and the Navy are particularly important because of the worldwide depression in shipbuilding. A few years ago a top official at the yard said that the Navy was Fore River's best customer, and that efforts would be made to see that it remained so.

At present only the Greek oil-shipping interests rival the Navy as a source of work at the shipyard. Because of a great deal of recent tanker construction in the United States and other big shipbuilding countries, prospects for more orders for tankers in the next year or two are none too bright.

That leaves the Navy, which already has had the *Springfield* towed out of the yard and which continues to study the possibility of moving other warships elsewhere for completion.

What are prospects for new Navy contracts? The Navy invited Fore River, among other yards, to submit bids for construction of destroyers which will be the Navy's newest. Eight yards bid, but Fore River failed to. Inability to estimate was given as the reason.

The yard has been reported interested in the construction of modern submarines. Present prospects are limited to Navy subs, and the strike could keep the yard from obtaining contracts, even if low bids were submitted.

Fore River has an outstanding record of design and construction in the last 60 years. In World War II it turned out 1,000 ships and held records not only for the number and variety of ships built, but also for value, displacement, tonnage, speed, horsepower, and firepower.

The South Shore has reason to be worried that the yard's great record may come to an end if the strike is not settled.

Wisconsin Claims Pioneer Station—WHA

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. WILEY. Mr. President, the radio broadcasting industry has contributed much to the progress in our country and enlightenment of our people.

In Wisconsin, the splendid network of WHA stretches over the entire State. In continuous operation since 1917, WHA is considered the oldest station in the Nation.

We realize, of course, that all modes of communication—radio, television, newspapers, magazines, and other information media—are highly significant, particularly in a republic where progress of the nation—and the effectiveness of its governing bodies—depend upon a well-informed citizenry.

Recently, the Midland Cooperator published an informative article on the history as well as current operation of WHA. Reflecting the splendid way in which WHA—historically and currently—serves to keep our people well informed, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN CLAIMS PIONEER RADIO STATION—WHA IS "MOTHER" TO NETWORK STRETCHING OVER ENTIRE STATE

(By Doris Ardelt)

Wherever Wisconsin's best-known "traveling saleslady" goes—a tape recorder goes along, which accounts in no small measure for the tremendous listening audience of Mrs. Aline Hazard's "Homemakers Program" heard daily at 10 a.m. over the Wisconsin State Broadcasting Service.

Not content with a "run-of-the-mill" homemakers' program, Mrs. Hazard travels throughout Wisconsin, ferreting out the unusual industries, people and places, and tells the rest of Wisconsin about them.

Mrs. Hazard has presented the word-pictures of such unusual Wisconsin industries as mink raising in Jefferson county; sphagnum moss growing in Millston; earth worm growing in Tomah; musical Christmas trees from Lodi; Cheesweet candy from Milwaukee; herb greenhouses from Baraboo; cranberry products and marshes around Wisconsin Rapids and Spooner.

She has visited turkey farms, duck farms, muck farmers, apple orchards sorghum mills, papermills, deer farms, woodcarving museums, historic Wisconsin sites, logging camps; talked with a group of Price County homemakers who made their own community job survey, and has literally sold Wisconsin to Wisconsin.

However, the homemakers program is just a small portion of the widespread coverage provided to Wisconsin listeners by the oldest station in the Nation—WHA, and its affiliated network—the Wisconsin State Broadcasting Service.

This network, composed of two AM stations and eight FM stations, is unique in this country. With receiver-transmitter sites located at Auburndals, Madison, Delafield, Chilton, Rib Mountain, Colfax, West Salem, Highland, and Brule, its educational programing reaches into every corner of the State, and beyond.

An educational, noncommercial network, it offers music, lectures, political forums, farm programs, weather roundups, market reports, stereo concerts, reading of current books, in-school listening programing, operas, concerts, university classroom lectures, speeches and interviews with visiting greats, all services which can be utilized in classrooms as well as to be enjoyed in the home. Visitors from other States and around the world visit the parent station WHA, located on the university campus, to observe its daily workings.

The entire network of FM stations broadcast Monday through Friday from 7:15 a.m. to 10:30 p.m. The two AM stations must sign off at sundown. Saturday programing is carried on WHA–AM only, and on Sunday, WHA and WHA–FM sign on at 9:00 a.m. The State FM network and WLHL signs on at noon. This has proven to be the most economical way to utilize the funds budgeted for this tax-supported statewide network.

All the stations in the network carry the same programs simultaneously through a simple, but powerful, pickup and rebroadcasting arrangement. The "mother" station—WHA—is the initiating point. The various network stations interrupt the programing only for their identifying station breaks and twice-a-day participation in weather roundup programs. In this way the various parts of the State present the weather picture for the day, and inform State residents of the overall Wisconsin weather picture.

It all started with the oldest station in the Nation—WHA, back in the year 1917, with the late Earle M. Terry, physics professor of the University of Wisconsin. In trying to stimulate interest in radio he may well have made the understatement of that year when he said—"Gentlemen, the time will come when wireless receivers will be as numerous as bathtubs in Wisconsin homes."

The early days of broadcasting are a story of scientific experimentation in university laboratories throughout the country. At the University of Wisconsin, Professor Terry, along with others with imagination—notably Prof. W. H. Lighty, director of extension teaching, and Prof. Andrew W. Hopkins, agricultural editor, grasped the significance that this plaything might have in reaching the boundaries of Wisconsin.

Wireless telegraph transmission had been in operation for years, before the onset of broadcasting, as it is known today. By 1915 daily weather reports were being sent out regularly by wireless telegraph transmission at the University of Wisconsin. In that year a Government license was issued for the university transmitter and the call 9XM assigned—9 for the 9th area of the United States—the "X" for experimental—and the "M" designating Madison.

From telegraphy, Professor Terry and his young student wireless-experimenters turned to telephony. Weird, garbled noises at first, the sound signals were improved to transmit voices and music. Hawaiian music was said to have given the best results because of its twangy character. Distortion made the broadcasts almost unintelligible in the early stages.

In the summer of 1917 Malcolm Hanson, a former student of Professor Terry's while on duty and engaged in radio work at various Great Lakes naval taining posts, reported hearing several telephonic broadcasts from the University of Wisconsin. As a result, the year 1917 was marked as the beginning of telephonic transmission from the University of Wisconsin.

WHA—the oldest station in the Nation—bases its claim on continuous broadcasting from 1917. On July 31, 1918, the Navy Department, which controlled wireless transmission, ordered all radio stations dismantled as a wartime precautionary measure. Close on the heels of this order came another authorizing the university stations to rebuild for experimental service to the Nation. Spurred on by this concession, the Wisconsin workers advanced in telephonic broadcasting, scheduling regular broadcasts and keeping detailed records of the results.

On January 3, 1920, a daily schedule of telephonic weather reports was started. According to Federal weather bureau officials, this was the first regular telephonic weather broadcasting service to be carried on in this country. Soon new services were added, including market and produce reports for farmers. Together, these broadcasts formed the backbone of the early service.

From such modest beginning, the numerous other broadcasting services have grown. When the legislature is in session at the capitol in Madison, legislators from both houses participate in legislative forum speaking to their constituents back home. U.S. Senators from Wisconsin report to the voters on Washington Reports. This State-owned network is really used by the people of Wisconsin.

Under the leadership of Prof. Andrew W. Hopkins the service was developed to meet the particular needs and interests of Wisconsin farmers. Radio has made it possible for farmers—even those living in remote areas—to get daily firsthand information and research results direct from their college of agriculture.

Professor Hopkins has also served as a member of the University Radio Committee. It was under Professor Hopkins' guidance that another important WHA broadcast feature developed—the Homemakers Program. Started in 1926 to give housewives reliable information on a variety of home subjects every day, this program has developed into an outlet for presenting Wisconsin to Wisconsin.

Mrs. Hazard, who believes that besides homemaking information, the housewives of Wisconsin want to know what is going on in their State, has a listening audience today of almost as many men as women.

The oldest, the largest, this broadcasting service with its eight FM stations and two AM stations has moved the boundaries of Wisconsin to the far corners of the world.

Address by Patrick A. Tompkins, Commissioner of Public Welfare, Commonwealth of Massachusetts, Given at the Governors' Conference on the Aging, April 20, 1960, at Concord, N.H.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. McCORMACK. Mr. Speaker, at the Governors' Conference on the Aging, held April 20, 1960, Hon. Patrick A. Tompkins, commissioner of public welfare of the Commonwealth of Massachusetts, and one well qualified by education and experience to talk on the subject, made a most informative and effective speech that might well be entitled, "Public Assistance and Services on the Problems of the Aged." In view of the position occupied by Commissioner Tompkins, and his profound experience in the field of public welfare, the remarks of Commissioner Tompkins are worthy of profound consideration.

It is with pleasure that I include his splendid address in my remarks:

ADDRESS BY PATRICK A. TOMPKINS, COMMISSIONER OF PUBLIC WELFARE, COMMONWEALTH OF MASSACHUSETTS, GIVEN AT THE GOVERNOR'S CONFERENCE ON THE AGING, APRIL 20, 1960, AT CONCORD, N.H.

I am more than delighted to be a participant in this, the New Hampshire Governor's Conference on Aging. Although the topic assigned to me by your distinguished chairman, my fellow State public welfare commissioner, is entitled, "Public Assistance and Services," I shall indulge in both poetic and Boston license to address myself to the problems of the aged, the services needed, and the responsibility of public welfare leadership in recognizing problems and providing services, not alone to the aged individual, but to the aging population as a whole. In the evolution of population changes in this country, as crystallized during and at the end of World War II with increasing and accelerating warning signals by a succession of demographic studies through 1958, the aged as a group began to emerge as a special unique, maligned, misunderstood, frequently exploited, sometimes demanding, sometimes meek, but always a larger minority of our country's population; and, as their numbers grew and as more studies were made, more warnings were issued, dire predictions forecast, yet two inescapable facts impressed the student, the researcher, the administrator, be he an administrator of health, welfare, or insurance, the political leader, and the everyday citizen: (1) The economics of the problem of the aged was of national concern and not solely a local responsibility; (2) The aged as a group are self-sufficient, well integrated, responsible human beings—provided their economic problems have been resolved.

True, many aged individuals as individuals present problems; the chronic physical maladies for which protection and remedial medical care must be not only initiated but also provided by resources outside of their homes and families; mental illness requiring institutional or hospital care for the protection of the individual and protection of society; special problems of living arrangements with inlaws, the need for available

and continuing spiritual consolation, cultural and recreational opportunities, on occasion even part-time or full-time employment, plus healthy hobbies to foster inner and spiritual growth. And for these individual problems, the local community in some measure and with increasing awareness, understanding, and better utilization of existing tools and resources is well equipped to provide.

Each of his succession of studies and reports on the aging problem, whether national in character, statewide, or limited to more provincial or local scopes, further crystallized as the number one problem of the aged the two-pronged threat of fear of disease or accident necessitating hospital care and the fear of economic and financial disaster should disease or accident strike. Certainly, the high desirability of preventive health care has been emphasized, as has been expanded diagnostic facilities, better, improved, and expanded home-care programs plus research and demonstration projects for community health services. But overshadowing all of these constructive and desirable observations and recommendations, is the special report on hospitalization insurance for Old Age and Survivors Insurance beneficiaries submitted to the House Committee on Ways and Means of the National Congress on April 3, 1959, by the Secretary of the Department of Health, Education, and Welfare. This study and report was, in fact, submitted to the Congress in compliance with a congressional request for such a study known as House Report No. 2288.

Merely as a digression, I think it important to point out that even if preventive health care, home care, and diagnostic facilities were available in all communities, it is highly questionable that the aged person who believes he is in good health can be expected to spend his limited available income when there is no localized or obvious complaint, disease, or injury, particularly in the light of the present high cost of medical services including the cost of prescribed medication.

The hospital insurance report of the Department of Health, Education, and Welfare made no precise and specific recommendations. Yet, no impartial or objective review of the findings—included in the report as to the annual income of persons over the age of 65, the incidence and duration of hospital care for this age group, and the demonstrated longer duration of hospital care for those having no hospital insurance could evade the inescapable conclusion that social insurance for hospital benefits is an absolute necessity now if not long overdue. There are 16 million persons over 65 years of age; 2,500,000 of these have some employment; 8,800,000 receive some old-age and survivors insurance; 2,500,000 receive old-age assistance. Of the total of 16 million, over three-fifths had income from all sources of less than $1,000 annually—virtually the actual cost of a hospital bill for an aged person at modern-day, inflated hospital costs for a serious illness or accident.

Less than 40 percent of these 16 million aged persons had any form of health or hospital insurance and a large portion of the insurance coverage available was inadequate both as to the per diem hospital payment or the limited number of days of coverage the insurance would provide. More significant, the cost of commercial or nonprofit insurance policies is prohibitive when the group contract of the employee in business or industry is continued upon retirement on an individual contract basis. Even more catastrophic is the purchase of two individual contracts for husband and wife out of retirement funds whereas the employee group contract at much lower cost and with higher income also covered the dependent wife.

There are and have been pending before Congress for some years legislative proposals for expanding and extending Old Age and Survivors Insurance so as to include hospital and nursing home benefits to currently insured beneficiaries. Probably the best known, since it is the original and oldest such legislative proposal, is H.R. 4700 popularly known as the Forand bill. This is a very simple legislative proposal. It provides that the taxable wage base shall be raised to $6,000 per annum, and the tax on the employer and employees alike shall be increased by one-half of one percent in order to provide for hospital, nursing home, and surgical costs of retired persons and their spouses not to exceed 60 days in any one year. It provides for admission to a duly licensed hospital or nursing home upon referral by a physician who is freely selected by the sick person.

So, there is nothing complex and, in fact, nothing new in a sense about such a proposal. As long ago as 1935, the national Congress, exercising the will of the people of this country, established a compulsory social insurance plan to combat the hazards of employment, advanced age, the death of the breadwinner, and permanent disability and impairment. There has been a "watch dog" advisory fiscal council which, from time to time, has assured the people of America and Congress that the trust fund out of which beneficiaries are paid is in sound, solvent actuarial condition. Indeed, it has indicated in no uncertain language that the soundness of Congressman Forand's bill cannot be challenged despite the projected cost of $1 billion during the first year of its operation if the legislation were enacted.

The American Medical Association has charged that the proposal constitutes socialized medicine. Such a charge is spurious when, in fact, there is no fundamental difference between the method of selection of a doctor under this insurance plan or the method of payment for physicians' services than is presently followed by the nonprofit Blue Shield plan or the commercial insurance plans presently operating. In fact, H.R. 4700 and companion bills in the U.S. Senate, sponsored by Senators KENNEDY and HUMPHREY, are, in the final analysis, a merely solvent method of payment of hospital, nursing home, and surgical bills, and more important, no new administrative machinery needs to be created. The OASI trust fund is already established and can absorb this new responsibility.

The principles of this legislation have been overwhelmingly endorsed by organized labor, and the individual worker whom you consult is more than delighted to start paying today for insured hospital and nursing home coverage for the days of his retirement when his income is so limited. Also note that the employee pays only when he is working and the contract is nonconceliable. How many persons pay for years to Blue Cross or commercial insurance, get sick or disabled once and find their insurance cancelled?

The elimination of the high-risk cases of the aging population from present Blue Cross and other nonprofit and commercial health insurance carriers would, in fact, increase the sales attraction of a better health package to the currently employed and younger employees when they are at their earning peak. Equally important is that the insured, in accordance with our social insurance system, would pay not a flat rate premium but one-half of 1 percent of his earnings whether the employee made $2,000, $4,000, or $6,000.

Of course, the extension and expansion of an insurance system, which has become in the last 25 years an American way of life for the American workingman and his dependents, is inextricably interwoven with administrative and political problems. In our democratic system, it is the special prerogative of our elected representatives to differ in philosophy, to compromise so long as principles are not compromised, and to weld a protective fabric against the hazards to security which are ever present in an industrial economy as fast moving as that of America's.

Yet, today, there is ample financial and statistical data to adequately demonstrate that, at least for the aged population over 65, the most demanding inroad on the available limited income of the retired person and his spouse is no longer made by the necessities of food, shelter, and clothing, but, rather, by the actual cost of medical, hospital, and nursing home. For example, in Massachusetts, 45 percent of the old-age assistance dollar is spent for medical need and one-third of that medical expenditure is for hospital care and almost one-half for nursing home care. For 18 months, over 50 percent of all applications for old-age assistance in Massachusetts have in fact been referred by and taken at the bedside of the applicant in the hospital or in the nursing home. Though retirement funds from whatever source may meet the basic necessities of food, shelter, and clothing, a hospital or nursing home bill becomes financial disaster and the aged person is forced to the indignity of applying for and receiving public aid. Indeed, the hospital and nursing home administrator is the chief source of referral for public welfare business today.

Unfortunately, there are no studies available as to the pressures and tensions created among sons and daughters who are either legally forced or by pride attempt to assume these catastrophic costs of hospital and nursing care with immeasurable harm to their home and family life and limitation of educational opportunities for their own children.

Again emphasizing the rights of both elected and administrative officials in Government and representatives of interested and organized groups to differ, it appears remarkable that in the light of the report of the Department of Health, Education, and Welfare, submitted to the National Congress on April 3, 1959, that almost 1 year later in testimony at an executive session of the House Ways and Means Committee of the National Congress on the subject of medical care for the aged, the Secretary, testifying specifically on H.R. 4700, the Forand bill, said, "* * * therefore I want to make it clear that as an administration, we will oppose any program of compulsory health insurance." The Secretary continued by stating, "* * * at the same time, I desire to emphasize again that I believe that continued progress in the direction of covering an increasingly large percentage of the aged by voluntary hospital insurance programs will still leave us with serious problems. There will still be aged persons whose policies provide inadequate protection. Also there will still be aged persons who will have no protection but who would be willing to participate in voluntary programs if provided with policies at rates that they could afford to pay. This administration—indeed all thoughtful citizens—are acutely aware of the need for approaching these problems with a sense of urgency."

Still later the Secretary stated, "Before arriving at a final conclusion as to whether the Federal Government can devise within this framework of principles a practical program, it is going to be necessary for us to explore further some complex issues." And still later in his testimony, the Secretary said, "We have not reached a conclusion as to the best manner in which to deal with such basic issues as these. In the effort to arrive at sound conclusions, it will be necessary for us to begin immediately to consult further with experts in Government, with outside experts

and groups, and with State officials. It is, of course, not possible to predict the length of time that it will take for these consultations."

If this problem must now be approached with a sense of urgency, the implication is clear that, despite the report rendered by the Department 1 year ago and the inescapable conclusions that must be drawn from that report, no sense of urgency had, in fact, existed either during the time that the report was being developed or in the year since it was presented to the Ways and Means Committee. The fact that, since Mr. Flemming testified, a number of alternative measures have been independently introduced by members of both major political parties in both branches of the Congress, suggests that the urgency merits not further study, further consultation with experts both in and out of Government, but rather the enactment of full-scale coverage of all persons over the age of 65 for purposes of hospital and nursing home protection. The Forand bill in the House and the Kennedy and Humphrey bills in the Senate are simple prepaid insurance bills which add to the present basic necessities of life for the aging population a new and more compelling basic necessity of life—hospital and nursing home care. Psychologically, they eliminate the greatest and most poignant threat to the business of growing old, the fear which accompanies advancing age as to imminent illness or accident, and how medical care is to be secured.

There have been so many studies as to the scope of this problem, the need has been so well defined that one of the most eminent of our newspaper reporters, Mr. James Reston, of the New York Times, has in the past 6 weeks devoted six separate and distinct columns to this problem. The Washington Post during the week of March 28 wrote an erudite editorial in support of the Forand bill and stated in part, "We think that President Eisenhower has put his party not only on the unpopular side of this issue but also on the wrong side of it." The editorial ended with the following quote: "Why automobile workers—and wage earners in every other trade and industry—should be enthusiastically eager to pay during their productive years for this kind of protection in old age should be readily understandable to anyone in political life. There is no more compelling aspect of social security."

In summary, the problem of hospital and nursing-home insurance for aged and retired employees and their dependents is the great and compelling humane issue of today. It is the great reassurance in terms of services and social security that aged persons want and demand. The substitute plans now before Congress would inevitably double and more than double present public welfare expenditures both in terms of administrative costs and insurance costs for hospital services. The continuance of the means test would be extended to all who desired to participate and be covered by the voluntary insurance plans. They heap indignity upon indignity and fail to face up courageously to the problem of today. This is the basic service that the leadership in public welfare should espouse and encourage by every means legitimately available. The savings to general revenue funds and expenditures out of public welfare appropriations would be enormous not only today but for challenging years ahead. The American Public Welfare Association of which I am a member endorses H.R. 4700, Mr. FORAND'S bill, or any other bill embodying the principles of the Forand bill. Although I am professionally a product of the "case-work school" of social work, my 27 years of administration in public welfare convince me that national social insurance is the best social service for aged people. This particularly includes the Forand bill with its protection against the economic disaster of hospital and nursing home costs.

Dangers of Apathy in the Face of the Communist Threat

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. SALTONSTALL. Mr. President, WNAC Radio, of Boston, has sponsored for some time, with the cooperation of the American Heritage Committee and the American Legion, a series of programs entitled "Dangers of Apathy." The purpose of these broadcasts is to bring about a strong and vigorous citizenry and an awareness of the dangers of international communism. The 75 separate programs making up the series, which have been programed over a 2-year period, will shortly be rebroadcast by WNAC, on a concentrated schedule.

Mr. President, I wish to congratulate WNAC for its foresighted and spirited public service for the people of New England. I ask unanimous consent that an open letter from Norman Knight, president of the Yankee Network Division, which discusses the threats to our society from within, as well as from without, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Boston Globe, Apr. 17, 1960]

AN OPEN LETTER TO MY FELLOW NEW ENGLANDERS

YANKEE NETWORK DIVISION,
RKO GENERAL, INC.,
Boston, Mass., April 17, 1960.

FELLOW AMERICANS: The time is now, not tomorrow or Wednesday or 1963. There are no "second chances" for the loser of the struggle in which America finds itself.

Only fools and Communists would convince us that communism has any real heart for world peace or compatibility with democracy. The Communists in Russia did not overthrow the czar—they butchered the members of the czar's successor—a liberal democratic government. Since 1917 the Russian Communists have used every falsehood, every broken promise, and every executioner's order of which they were capable for one objective; the creation of a world dictatorship.

This is a total struggle, a world crisis which extends without and exists within our borders. As dreadful as the Communist scourge without is, more vicious is the threat from within.

For only a strong and vibrant America can successfully resist further Communist inroads on the world's population (communism now controls over one-third of the world's population, one-fourth of the world's land area). Communists seek to mold men's minds, to accept communistic triumphs as inevitable, to portray peace and prosperity as Communist inventions and to identify social progress with communism. The party line as established by "Agitprop" (device of the U.S.S.R. Communist Party Central Committee) is effectively enforced throughout the world including America. Party discipline has never been stricter than it is now in America under the ruthless, fiery, fanatical, and devious leadership of Moscow-trained Gus Hall.

Unfortunately, the party is now united behind Hall and factionalism has been eliminated. In contrast, the forces exposing and fighting communism are handicapped by part-time leadership, interference from fellow travelers and, most of all, by the public's apathy.

In this struggle there are great towers of American strength who give us leadership. Here in New England, Richard Cardinal Cushing, beloved by all faiths, has set a standard in this field to which all may aspire. His is a contribution that only history will properly relate; for his patriotic actions in defending democracy's bastions here and around the world, legion as they are, include a far greater number which remain anonymous. Three hundred and sixty-five days a year His Eminence inspires a lasting faith in our American democracy and a sincere understanding of the moral values rooted in the Judeo-Christian traditions. Truly, America and the entire world can never be allowed to forget the magnificent dedication of this great prince of the church, so that his example may serve all.

We look constantly to Washington for the guiding hand and fearless leadership of another great American, J. Edgar Hoover, whose courage under every conceivable pressure has often given the Communists pause. Here is a man proud to be patriotic, selfless in his devotion to democracy and concerned only with service to his Nation and God.

A few great men such as Cardinal Cushing and Mr. Hoover cannot continue to accept the responsibility for all Americans; we need a general awareness of the problem and its solutions. Previously, I referred to apathy—"apathy," a word which Webster defines as "a lack of emotion" or "indifference." The general state of apathy among Americans must be overcome if democratic traditions are to be passed on to future generations of Americans.

In order to expose the Communist menace and to contribute to an awakened citizenry, WNAC radio in cooperation with the American Heritage Committee and the American Legion has presented 75 separate programs over a 2-year period, attracting speakers who can vividly demonstrate what J. Edgar Hoover calls Communist illusion and Democratic reality.

To realize maximum impact for this series titled "Dangers of Apathy," I am privileged to announce the scheduling of these programs on a basis heretofore unknown in any medium of communications.

WNAC's regular programs have been canceled twice daily, 5 days a week for 10 presentations a week (each of 15-minute length), so that all 75 programs can be heard twice a day by all. Listeners may tune to WNAC at 6:15 a.m. or at 6:15 p.m. Monday through Friday and hear every program in this series of public affairs broadcasts, presented as a public service.

You owe it to yourself—you owe it to America to listen this week and every week for the next 15 weeks to "Dangers of Apathy."

As I said at the beginning, the time is now, and our first step is to be alert to the dangers of apathy.

Sincerely yours,

NORMAN KNIGHT,
President.

Old-Age Survivors and Disability Insurance—Past Major Changes in the Law

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, in view of current proposals for changes in the social security law, I

felt that Members and others might be interested in an excellent summary of past developments of this law as prepared for me by the Legislative Reference Service of the Library of Congress under the direction of Miss Helen E. Livingston of the Education and Public Welfare Division of that Service. I am therefore including it as part of my remarks.

BRIEF DESCRIPTION OF THE DEVELOPMENT OF THE OLD-AGE SURVIVORS AND DISABILITY INSURANCE LAW

The social security system provides two kinds of assistance for the aged, dependent children, and the severly disabled in this country: (1) a social insurance plan, commonly known as "Social Security," financed by tax contributions by workers and their employers and paying benefits on the basis of these contributions, and (2) Federal grants-in-aid for State plans for persons (including the blind) who can demonstrate need as defined by the State. This memo will be limited to a brief description of the development of the insurance, or social security plan.

In summary it could be said that three basic features of the social insurance program have remained unchanged since the system was established in 1935: (1) Benefits are paid as a matter of right to insured persons, without a need test; (2) the benefits are related to earnings, as contrasted with uniform or flat benefits to everyone; and (3) the system is financed entirely by equal payroll contributions for employers and employees (and related payments by the self-employed) as contrasted to systems financed from the general revenues. The system has always been on a self-supporting contributory basis (a requirement of the law since the 1950 amendments) without a general subsidy from the Federal Government.

The three major policy changes made by the Congress since 1935 were: (1) The shift of emphasis in 1939 from the private insurance principle based on individual equity to a family program through the payment of benefits to dependents and survivors rather than exclusively to the individual worker; (2) the change in 1950 from a plan primarily for workers in commerce and industry moving toward a universal plan for practically all individuals and families in the country dependent upon earnings of any kind; and (3) the addition of a new program for the severely disabled, accomplished by the disability freeze (a form of waiver of premium) in 1954, and by authorizing benefits for disabled persons aged 50 and over in 1956. Attached is a resume of major features of the Social Security (OASI) Act showing changes made by the Congress since the system was first established in 1935.

MAJOR FEATURES OF THE SOCIAL SECURITY (OASI) PLAN SHOWING CHANGES MADE BY CONGRESS

Social Security Act of 1935 (Public Law 271, 74th Cong.)

Coverage: Workers under age 65 in commerce and industry (about 3 out of 5 of the labor force).

Type of benefit: Old-age benefits to the worker when he retired at or after age 65 together with cash-contribution refunds to survivors when the wage earner died and to living workers aged 65 who had not been in covered employment long enough to qualify for benefits.

Benefit amount: Weighted in favor of the worker with short service or low wages but increased for those who had contributed for many years.

Contribution rate: 1 percent each for employers and employees on wages up to $3,000 a year. [The original tax rate was scheduled to increase, by steps, to 3 percent each by 1949 but, through so-called tax freeze legislation by the Congress it was held at the 1-percent rate until 1950.]

Retirement test:[1] Benefits canceled by any earnings from regular employment.

Nineteen thirty-nine amendments (Public Law 379, 76th Cong.)

Coverage: Extend to workers over 65.

Type of benefit: Extended to certain dependents of retired workers (aged wives, children under 18) and survivors (widows and children under 18) of deceased workers.

Benefit amount: Revised to reduce emphasis on length of contributions but still gave credit for each year of service. "Money back" guarantee eliminated. [In effect deemphasizing these features in favor of dependent and survivor—or "family"—benefits.]

Average primary benefit at the end of 1941 (first year benefits were paid), $22.60.

Contribution rate: The change did not ultimately become effective because of the "tax freeze" noted above.

Retirement test:[1] Allowed earnings of $14.99 per month from covered employment with no loss of benefit.

Nineteen hundred and fifty Amendments (Public Law 734, 81st Cong.)

Coverage: Considerably extended to some 10 million jobs, chiefly the nonfarm self-employed (except members of specified professions), regularly employed farm and domestic workers, employees of nonprofit institutions (on a group elective basis), and State and local government employees not covered by a retirement system (at the option of the employer).

Type of benefit: Extended to aged dependent husbands of women workers.

Benefit Amount: Roughly doubled through a revised benefit formula (still weighted in favor of low-income workers), with a related increase for beneficiaries already retired. Repealed provision giving credit for each year of service, and related benefit to more recent earnings.

Average primary benefit prior to amendments was $43.86.

Contribution rate: 1½ percent each for employers and employees on wages up to $3,600; to rise, by steps to 3¼ percent each in 1970 and thereafter.[2]

Retirement test: Allowed earnings of $50 or less per month with no reduction in benefits, but benefit deducted for each month earnings exceeded this amount.

Nineteen hundred and fifty two Amendments (Public Law 590, 82d Cong.)

Coverage: No change.

Type of benefit: No change.

Benefit amount: Increased benefits by about 15 percent (around $5). Average benefit in 1952: $49.25.

Contribution rate: No change.

Retirement test: Allowed earnings of $75 or less per month with no reduction in benefits, but benefit deducted for each month earnings exceeded this amount.

Nineteen hundred and fifty-four amendments (Public Law 761, 83d Cong.)

Coverage: Extended to another 10 million workers in the course of a year, including self-employed farmers, more domestic and farm workers, State and local government employees under retirement systems (at the option of the employer and the election of the group covered), ministers, and all self-employed professional groups previously excluded except lawyers, dentists, doctors, and other medical groups. (About 9 out of 10 workers in the labor force now covered.)

Type of benefit: The "disability freeze" provision—essentially a "waiver of premium" clause was adopted to maintain both the insured status of severely disabled workers at any age, and their benefit amount.

Benefit amounts: Increased by about 15 percent by a change in the benefit formula. Average old-age benefit: $59.14 at end of 1954.

Contribution rates: Increased to 2 percent each for employers and employees on wages up to $4,200 to increase to a maximum of 4 percent in 1975 and thereafter.

Retirement test: Allowed earnings of $1,200 a year, with one benefit deducted for each $80 or fraction thereof above this amount, except that no earnings could be deducted for any month in which earnings were $80 or less.

Nineteen hundred and fifty-six amendments (Public Law 880, 84th Cong.)

Coverage: Self-employed lawyers, dentists, and all medical groups (except physicians) and members of the uniformed services.

Type of benefit: Provided benefits for severely disabled persons aged 50 and over; age for women lowered to 62 paying full benefits for widows at that age but actuarially reduced benefits for widows and women workers unless they delay retirement to age 65.

Benefit amounts: No change.

Contribution rate: Increased to 2¼ percent each for employers and employees (the additional one-fourth percent to finance the disability benefits plan through a separate trust fund) to increase to a maximum of 4¼ percent in 1975 and thereafter.

Retirement test: No change.

Nineteen hundred and fifty-eight amendments (Public Law 85–840)

Coverage: Minor extensions.

Type of benefit: Provided benefits for the dependents of severely disabled persons aged 50 to 64, inclusive.

Benefit amounts: Increased by 7 percent. Average old-age benefit: $66.04 in late 1958.

Contribution rate: Increased to 2½ each for employer and employees on wages up to $4,800 to increase, by steps, to 4½ percent in 1969 and thereafter.

Retirement test: No change except that no earnings can be deducted for any month in which earnings were $100 (formerly $80) or less.

[1] Also known as "work test" or "income limitation."

[2] The rate for the self-employed is 1½ times the employee rate.

Mundt Resolution Would Curtail Sheep and Lamb Imports

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1960

Mr. MUNDT. Mr. President, yesterday the Senate Committee on Agriculture and Forestry overwhelmingly approved a resolution which I introduced to convey to the U.S. Tariff Commission the sentiment of our committee that the American sheep and lamb industry, is entitled to adequate protection against ruinous foreign imports.

For the information of the Congress and the country, I ask unanimous consent that my resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

COMMITTEE RESOLUTION AGREED TO APRIL 27, 1960, BY SENATE COMMITTEE ON AGRICULTURE AND FORESTRY FOR SUBMISSION TO THE U.S. TARIFF COMMISSION REGARDING LAMB AND MUTTON IMPORTS

Whereas this committee in 1954 and in 1958 reported out bills which were enacted by Congress to encourage the domestic production of 300 million pounds of shorn wool annually; and

Whereas this legislation provides for incentive payments on wool in order to encourage increased production and to meet costs of such production; and

Whereas in the enactment of this legislation this committee assumed that the lamb phase of the sheep industry would be operating in a free market without price supports; and

Whereas imports have shown a rapid increase in volume during the past 3 years growing from .81 million pounds of dressed lamb in 1956 to 9.5 million pounds of dressed lamb in 1959, and growing from .56 million pounds of dressed mutton in 1956 to 47.3 million pounds in 1959; and

Whereas imports have risen from practically 0 percent of our commercial lamb and mutton slaughter to 7.78 percent in only 3 years, which displays a trend that could become disastrous; and

Whereas live sheep and lamb imports in 1959 totaled 75,073 head including 27,000 head from Canada and approximately 48,000 head from Australia, the latter being the beginning of a regular movement of live lambs from that country; and

Whereas this greatly increased volume of imports is arriving here at prices considerably under those for domestic lamb and mutton, raised in countries where production costs are much lower than ours and with the majority of imports coming into the sensitive lamb price setting areas of New York, Chicago, and Los Angeles; and

Whereas this undue market pressure from imports has affected prices received by the American producers of lamb and mutton; and

Whereas there is abundant red meat production in the United States for domestic needs: Now, therefore, be it

Resolved, That it is the sense of this committee that remedial action should be taken under the escape clause of the Reciprocal Trade Agreements Act to provide adequate protection for, and to avert injury to, the domestic sheep industry.

A New Era for the Pompano Beach Town News

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. ROGERS of Florida. Mr. Speaker, on April 12 of this year a new era began for one of the rapidly growing areas of the Sixth District of Florida with the publication of a daily newspaper.

The Pompano Beach Town News of Pompano Beach, Fla., formerly a semiweekly paper, began publication as a daily paper this month. The daily will be associated with the Miami Herald of Miami, Fla., long an outstanding newspaper in Florida and the Nation.

I would like to extend congratulations and best wishes to Publisher Francis Zent and Editor Margaret Moore and the entire staff of the Town News for a successful future in the north Broward County area.

The editorial, "Town News Goes Daily and Launches New Era," which appeared in the paper on April 12, will be of interest to all of those who follow the growth and development of Florida, and for this reason I ask that it be inserted in the RECORD at this point.

TOWN NEWS GOES DAILY AND LAUNCHES NEW ERA

As a new era begins for the Pompano Beach Town News, with a publication of today's daily issue, it is difficult to suppress a feeling that a new era has begun for North Broward County, too.

Residents may be surprised at the inspiring effect that an alert, objective and forward-looking local daily newspaper can have upon an area.

It can—and the new Town News certainly will—change the whole air of a place, giving a crispness and immediacy to civic and governmental affairs that is felt through the warp and woof of the region.

An area turns a corner, tops the crest of a hill, when it reaches the point of having its own daily newspaper—when its newspaper, that is, says goodby to a weekly status and undertakes to interpret local affairs from hour to hour.

Civic groups sense the change. So does business, and so does government. All will be improved by it; all will be more alert and more effective, and through them, the citizen will feel the change.

The new Town News will bind North Broward together as it has never been bound before—and in so doing, will bind North Broward also to the rest of the county.

At the same time, this segment of the county will become more of an entity, less of an appendage to the more populous Fort Lauderdale area. It will don a new personality, speak with a louder voice, move ahead with more certainty and aggressiveness, tackle its problems with more confidence and vigor.

The combination of the Town News and the Miami Herald, the latter one of the world's great newspapers, an international authority and certainly the recognized voice of Florida, will give North Broward a news package of incomparable scope and proportions.

And in all things the two publications will be just, honorable, and fair, shunning personal ax grinding, devoted to progress, striving to be objective, penetrating, and articulate, at the same time sensitive to and sympathetic with the changing moods and needs of these communities.

Chemical Progress Week

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the varied resources of New Jersey have been described by its ardent citizens on many occasions, and there is one resource which should receive special attention during this, Chemical Progress Week. I am referring to the chemical industry of the Garden State.

An editorial in the Passaic (N.J.) Herald-News of April 26 describes this New Jersey industry and points out that New Jersey ranks first in the Nation in the manufacture of chemicals and allied products.

The location of New Jersey and its skilled work force, together with other advantages, have persuaded many manufacturers to locate there, and they are certainly welcome.

Mr. President, the Herald-News editorial gives an interesting account of present activity and future possibilities. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW JERSEY, THE CHEMICAL STATE

The chemical industry is observing this week as Chemical Progress Week. It is a week which has especial significance for New Jersey. Our State could be called the "Chemical State" more properly than the Garden State.

New Jersey ranks first in the Nation in the manufacture of chemicals and allied products. It has more than 850 chemical plants and laboratories and approximately 86,000 persons employed in the industry. Their wages total more than $481,289,000 annually. By comparison New York, our nearest competitor, has 68,000 persons employed in chemicals and Texas, which ranks No. 3 in the Nation, has 40,000 employed.

There are many things about the chemical industry that make it desirable. Wage rates are among the highest paid by American industry. It requires a generally higher level of skill, which means higher per capita income. The cost per worker of plants is the highest of all industry. This makes the plants excellent tax sources. The plants are generally quiet, clean, extremely safety conscious, and careful about pollution.

The most desirable feature is that the industry is growing at a furious rate, with the sky the limit. A few of the items listed in the industry's 1960 facts book as possibilities for "the near future" offer an idea of its future prospects. They include "an automobile with no engine; power would come from a small cylinder on each wheel holding oxygen and hydrogen gases; chemicals to control heredity and animal behavior; plastic domes to place over entire houses and yards for year-around climate control; new pain-killing drugs many times more powerful than morphine, but are nonhabit forming."

New Jersey is fortunate to be the favored home of the chemical industry.

Activities of the Home Loan Bank Board

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. UTT. Mr. Speaker a few weeks ago in my Washington report to my constituents I discussed the invisible and faceless bureaucracy operating through boards, bureaus and commissions, so that our citizens are governed by people they have never seen, never voted for, cannot recall through any process of law, and who administers more administrative law than statute law.

Last week this was brought home most forcibly by the arbitrary, capricious, conspiratorial and unwarranted seizure of the Long Beach Federal Savings & Loan Association by the Home Loan Bank Board under the guise of an "emergency." However, in making their announcement of this sudden and unwarranted move, they cited a list of allegations which they said had been in existence since 1947, 1948, and 1949. If these grounds existed 12 years ago, it was the duty of the Home Loan Bank Board to make its move at that time rather than to wait until this savings and loan was in the process of converting from a Federal to a State charter.

The Home Loan Bank Board made false and libelous statements about the management, and caused a run on the association. If any citizen of the United States made such allegations causing a run on a banking or a lending institution, he would find himself in the toils of the law, and would be prosecuted. This seizure is apt to cause a great financial loss to the depositors who are the shareholders of this association, of the surpluses which this association had built up.

It is conspiratorial because the Home Loan Bank Board discharged the personnel of the association and installed many personnel of competing institutions in Southern California. The Home Loan Bank Board agent forced the delivery to him of $22 million in cash and Government bonds and posted no more than a $1 million fidelity bond, when the bond should have been equal in amount to the cash and Government bonds delivered to him.

I have joined with several other Members of Congress in Southern California in asking for a complete and immediate investigation of the activities of the members of the Home Loan Bank Board, its employees and agents, in order to protect the depositors of the Long Beach Federal Savings and Loan.

Mr. Speaker, I ask unanimous consent to include herewith an editorial on this subject from the Newport Harbor News Press in my district.

Armed with a certified copy of a Federal Home Loan Bank Board order, 44 "auditors, accountants, examiners, and assorted personnel" moved in on the Long Beach Federal Savings and Loan Association Friday evening with a seizure order.

Despite the listing of false charges in the order, the avowed purpose for the seizure was to prevent the shareholders and management of the association from converting it into a State mutual savings and loan association that would be free from the arbitrary and capricious abuse of authority and administration of the Federal Home Bank Board, and its alter-ego the Federal Savings and Loan Insurance Corporation.

It was on May 20, 1946, shortly before 9 a.m. when the first seizure of the association was undertaken for the sole and expressed purpose of "creating a run on the association and destroying it." Your writer was there that morning as a reporter for the Los Angeles Examiner. Over the years we have kept abreast of the hundred lawsuits and hearings at various stages of progress now in the courts.

During the hold on the association exercised by one A. V. Amman, Assistant Secretary of the Federal Home Loan Bank Board, the deposits in the association were depleted by two thirds. So poorly was the administration of this minion of the Federal bureau exercised that neither he, nor the FBI auditors have ever been able to make a satisfactory accounting.

When, under a court order, the Long Beach Federal Savings and Loan Association was returned to its rightful founding management in 1948, the association again began to grow. Where it was a $30 million association when seized, depleted to a $12 million association when returned, in the interim it has grown to $100 million since 1948.

Members of the Attorney General's staff of the United States have admitted on the witness stand that they (1) trumped up charges against management for horsetrading purposes; (2) endeavored to obtain indictments for income tax evasion by principals of management although admittedly no evasion or wrong existed.

The present seizure was likely brought in order to (1) prevent the conversion of the association to a State association, thus permit it to escape Federal harassment; (2) liquidate outside of court the suit of management for recovery of $10 million of misappropriated assets by Federal agents; (3) abscond to the Federal Bureau with the $6 million surplus which belongs to depositors.

Why should we in the Newport Harbor News-Press devote this much space to a story relating to a Federal incident 20 miles removed from the community?

The writer is the publisher of the Newport Harbor News-Press. As a reporter "on the beat in Long Beach" for the Los Angeles Examiner he covered the first seizure in 1946. Because he searched and studied and fought the wrongful acts of U.S. Government employees he was nominated as director by the principals of a shareholders committee. He was elected, reelected. In the interim he has attended a score of congressional inquiries into the abuse of the minions of Federal Home Loan Bank Board, the Federal Savings and Loan Insurance Corporation, and the U.S. Attorney General.

The newspaper reporter who witnessed the first seizure has had the opportunity to gain an education in finance and law, and public administration that would seldom come to a person in 15 years. He has seen the seamy side of Government agencies that have taken unto themselves the possessive interest of the citizens.

The writer over the years has learned to know that neither Democrat nor Republican has a copyright on wrong or on right. He has seen several administrations of the Government of the United States acknowledge the wrong that was perpetrated and yet do nothing.

We have seen Congressmen of California, CECIL KING, a Democrat; CHET HOLIFIELD, a Democrat; HARRY SHEPPARD, a Democrat; and JOHN PHILIPS, JAMES B. UTT, Republicans, fight tenaciously to assist in restoring to their constituents constitutional rights and guarantees and access to the courts for a trail on the merits of charges brought. HOWARD SMITH of Virginia presided over a congressional committee that damned the bank and insurance bureaus.

Government bureaus employ armies of public relations assistants for their administrators to disseminate their libels and frauds. They are free from suit and know no integrity, most are unemployable in legitimate news gathering channels.

There will probably be many libels. We urge you to follow the stories in this paper and in the metropolitan daily of your choice. There will be compilations of the most fabulous story ever told—each lie of bureaus of the U.S. Government will be another morsel of mortar in the tomb of democracy. We will search for the truth and print it here.

BEN REDDICK.

Social Security for Physicians

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement sent to me by Dr. Max Seham, of Minneapolis. This statement contains an analysis of the problem of retirement for members of the medical profession and the recommendations of Dr. Seham regarding the inclusion of members of the medical profession under social security.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY FOR PHYSICIANS

(By Max Seham, M.D., Minneapolis, Minn.)

The only professional man in America not protected under the social security system is the self-employed physician.

Why? Are doctors different? Are they immune to misfortune? Are they a caste apart? Is it true, as the AMA says: that "doctors do not retire"?

The truth, of course, is that doctors get sick with the same illnesses they treat in their patients. Their eyes may see double with age. Their joints and muscles may become crippled with arthritis; their hearts may wear out; their arteries harden. And sooner or later, even if they don't retire themselves, their patients may put them on the retired list.

They have economic needs and problems, too. Not all of the 200,000 self-employed doctors in America attain financial independence. Long sieges of illness, bad investments, other misfortunes attack their economic security just as critically as though they were ordinary mortals. "Freedom from want" is a need of physicians just as it is for the rest of America's 175 million population.

For most of this 175 million, social security has become a major bulwark against want. In the face of economic change, marked increase in the number of aged, and the impact of two wars, the Federal social security system has stayed solvent and strong. In 1955, more than 75 million Americans benefited from it. As of last year, some $8 billion was paid out of a $23 billion trust fund to 12½ million retired workers and their dependents. Nine out of ten workers and their families have access to the system's protection. In the last 10 years the maximum benefits have increased from $85 monthly for a family to $254, and the ceiling on covered earnings has gone from $3,000 annual income to $4,800.

Of special benefit to practicing doctors is the old-age, survivors, and disability insurance (OASDI) program. Many a widow and her children could be kept from destitution if her husband were eligible for OASDI. For retired workers alone, benefits can range up to $116 a month. If a doctor now age 65 begins to pay contributions and continues for 4 years, he could be eligible for retirement benefits. If he were 69 now and still in practice, he would have to pay for one and a fraction years, but at age 72 he would be eligible whether he had retired or not. If his wife is beyond the age of 65, 50 percent more is payable.

Before entering into a discusison of social security for physicians, it is well to explain

the differences between social insurance as exemplified by social security and private insurance, whether in the form of annuity policies, disability and retirement insurance pensions, and so forth.

To claim that private insurance is a better buy than social insurance, is to say that bananas are a better fruit than peaches. Since their underlying philosophies are different, their benefits are incomparable. Social security is the appilication of the risk-sharing principle to the largest possible number of people. It attempts to distribute benefits to all who can participate on a contributory basis.

With private insurance, protection starts at the time of purchase of the policy. This plan continues benefits at the remarriages of a divorced or widowed spouse. Social security benefits cease under these circumstances. Under private insurance a person may draw benefits at age of 65, while under the other plan the benefits are drawn only upon retirement, and this may be at a later age than 65. Under a private annuity policy, the longer you pay premiums the more you get. Not so with social security. Unless Congress changes or amends the law, the benefits remain the same no matter how long the beneficiary has paid premiums provided he is qualified.

A practical advantage of social security is the fact that there are no exclusions and restrictions which prevent the aged from getting protection. In private insurance there are usually medical examinations before insurance is made available.

I have before me a circular from my State medical society which promises "an opportunity to obtain coverage for all ages regardless of medical history" through a proposed group life insurance program. On reading the fine print, I find that it is merely a life and accident policy with the rates perhaps somewhat lower than for individual life insurance policies. There are no provisions for disability insurance nor retirement benefits.

It is practically impossible for anyone over 60 to get disability and retirement benefits from private insurance companies. A colleague of mine, whose disability insurance ran out at the age of 70 after a siege of illness from which he recovered, sought desperately to obtain continuing protection. The insurance ads held out promises of large monthly payments for from 2 to 4 years including payments for hospitalization. After several months he was still hunting for a policy which would provide him with a coverage which would be at least equal to that of social security.

In the face of such facts, it is hard to understand why the AMA appears determined to exclude its membership from the system's benefits. At a time when both industry and organized labor are offering additions to social security protection, why is organized medicine, traditionally so paternal toward its members, so insistent on depriving them even of minimum protection?

The spokesmen of the AMA, testifying before the House Ways and Means Committee last summer, gave these reasons for their stand: (1) The social security system is actuarially unsound; (2) doctors do not retire; (3) most doctors don't want social security; and (4) the system is "creeping socialism."

Let us consider these arguments:

1. The social security system is actuarially unsound.

What does the AMA mean? That the system is financially insolvent? Does it mean that benefits received from social security are less and the premiums paid in taxes are higher than the policies the private insurance companies sell?

On both of these scores it seems that the AMA is as far out of step with the present administration as it was with the Roosevelt and Truman administrations. In his 1957 message to Congress President Eisenhower proclaimed, "The system is not intended as a substitute for private savings, pensions and insurance protection • • • It encourages thrift and self-reliance and helps to prevent destitution in our national life."

Because the OASI trust fund showed in 1957 and 1958 an excess of outgo over income, the AMA was fearful that "America faces financial bankruptcy and the collapse of the Republic." On this point Robert J. Myers, Chief Actuary of the Social Security Administration, has no fear about the solvency of this trust fund because "Congress gives very conscientious consideration to the costs of the program. Up to date the contributions have been higher than the outgo. Any money left over goes into Government bonds which are just as valid as any that any insurance company holds." "I am quite confident that there will be no progressive increase of excess of outgo over income for the OASI trust fund in the near future," concludes Robert Myers in an address before the Cambria County Medical Society on March 12, 1959.

2. They say doctors do not retire.

The AMA has published figures to show that 85 percent of doctors between 65 and 72 are in active practice. Of those, 50 percent do not retire until after 74. Information from the U.S. Department of Health, Education, and Welfare indicates that no one has been able to determine the percentage of doctors who actually do retire. It may be true, as the AMA claims, that most physicians do not retire at the proverbial 65, but it is not correct to conclude that few physicians would benefit from the retirement features of social security. Many physicians who are sick or partially disabled hang on as long as they can because they cannot afford to retire.

3. They say the majority of doctors do not want it.

Another argument of the AMA's high command against the inclusion of the membership in social security, is that the rank and file of the self-employed doctors have voted against it. It is true that in 1952 the polls taken by State medical societies showed the majority of practitioners voted against compulsory inclusion.

However, the most recent polls by the independent magazine, Medical Economics, show an impressive shift in sentiment. Of the 5,000 self-employed physicians who expressed an opinion in 1958, 56 percent favored compulsory social security coverage, 30 percent opposed it, and 14 percent were undecided. Fifty-four percent of general practitioners are for it, and 58 percent of specialists voted yes. Those longest in practice voted in favor of inclusion. Also in the larger communities a higher percent favored coverage. Even physicians in small communities and in rural areas, who in previous years had opposed social security, voted 51 percent in favor, 35 percent against, and 14 percent undecided. Among the reasons most frequently cited for wanting inclusion were: that (1) everybody else has it, (2) it's inevitable, so why postpone its benefits, (3) it's a bargain, and (4) it's a downright necessity.

As a New Haven surgeon puts it: "The $200 a month my widow and two children would draw if something happened to me adds up to the return of an investment of $40,000 at 6 percent a year. It would not affect any other investments I might have. And I can't for the life of me see how I would be giving up any of my personal freedom as some of my colleagues seem to feel."

Congress cannot be held altogether responsible for this impasse. At the hearings of the House Ways and Means Committee in 1958, Congressman FORAND revealed letters and telegrams voluntarily sent from every State in the Union, showing that over 2,000 doctors were in favor of being covered and only 135 were opposed. In spite of this 15-to-1 majority, powerful pressure by the AMA and other forces persuaded Congress not to act. Yet in spite of the AMA propaganda, as of 1958, the rank and file of the medical profession have come to realize that social security is here to stay and that it is false pride not to join the system.

The problem of inclusion of self-employed physicians cannot be swept under the carpet any longer. The results of the Medical Economics poll, the letters received by Congressmen, the resolutions endorsed by 26 State medical societies favoring inclusion, justify the assumption that a secret referendum of the total membership of the AMA would reveal a similar majority in favor. The evidence shows that the opposition of the house of delegates, the controlling policy body of the AMA, does not conform to the needs and wishes of the majority of American doctors. It is time that the AMA hierarchy yield to the wishes of its members and reverse its position before the 86th Congress.

4. It is creeping socialism.

The first three excuses for the opposition of the AMA are merely a facade for the most important reason.

Ever since the depression of the thirties, the AMA has been fighting anything that smacks of the New Deal, the Fair Deal, and even New Republicanism. Whenever Congress has offered a progresisve health or social welfare measure, the AMA reflexly whips up the oft-repeated warning that all forms of public welfare will inevitably result in the averaging process and destroy individualism and initiative. Dr. Dwight Murray, in his presidential address before the house of delegates in 1958, had this to say: "We have been caught in the throes of a social revolution which demands something for nothing." Dr. George Lull, recently resigned as secretary of the AMA, feels no better about the Eisenhower administration than about the previous Democratic regimes. He writes, "They are attacking us piecemeal. Truman was easier to handle because he came on you head on trying to get socialized medicine enacted at once."

The leaders of the AMA, seeming to suffer from a persecution complex, talk and act as if there were a national conspiracy against the medical profession. With every new bit of social legislation, they fear that the days of American medicine are numbered. This chronic obsession that change means loss of prestige has rendered them impotent and unrealistic in medical economics. The AMA to the contrary, social security and the proposed amendments for coverage of doctors are not revolutionary. They are the logical and inevitable outcome of the great socio-economic-humanitarian changes that have been taking place in our country over the last quarter of a century.

Like all other Americans, physicians can buy accident, sickness, and retirement insurance in such amounts as they can afford and if they are able to pass their medical examinations. But many private practitioners do not have the incomes which will enable them to buy all the insurance they need for adequate protection for themselves and their families. This is especially true when physicians are of retirement age. Social security can help to mitigate such hardships.

Social security is an indispensible institution in our modern economic structure. Few people question the need for social security for themselves and their families. Yet the AMA, through its house of delegates, have taken upon themselves the grave responsibility of excluding 200,000 self-employed practicing doctors and their families from getting this protective floor.

Charles I. Schottland, former Commissioner of the Social Security Administration,

writes, "Personally I think it is unfortunate that physicians are not covered under social security. They are the only large group in the country not now covered. As I move about the country and talk to the younger physicians, I am convinced that most of them want the protection which social security gives to their wives and children."

No one expects social security to solve all economic problems for the individual doctor. Nor need there be any conflict between social insurance and the type of financial security which private insurance companies sell. The former represents the basic protection which can be provided by Government programs, while the latter gives the individual the right and the opportunity to get as high a protective ceiling as his thrift and business success allows. To quote Elizabeth Brandeis, the well-known sociologist, "Social security is more of a net to catch those who fall, rather than an overly soft featherbed."

Kansas Salt Mines—Underground Noah's Arks

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. BREEDING. Mr. Speaker, I would like to revise and extend my remarks in the CONGRESSIONAL RECORD to include an article prepared by Mr. Ken Kluherz, development director at Sterling College, Sterling, Kans., entitled "Kansas Salt Mines—Underground Noah's Arks." Mr. Kluherz has devoted much of his spare time for the past 2 years researching the value of the Kansas salt mines as headquarters for top military leaders as well as civil defense. The chamber of commerce of Lyons has worked with Mr. Kluherz in exploring his ideas.

It is my belief that the following article contains vital information to the Nation's welfare, both for peace and war, and feel it merits the thoughtful consideration of this great legislative body. I ask your serious and thorough reading of its contents and know that after you have digested it thoroughly, you will be convinced that it should be given careful and complete investigation by our military leaders:

A city that is set on a hill cannot be hid (Matthew 5: 14)—but in 1959 S.A. (space age) the North American Air Defense Command (Norad) is hiding a city in a hill at a cost variously estimated from $28 million to $50 million.

The hidden city in a hill is being carved in the granite of Cheyenne Mountain, near Colorado Springs, Colo., for defense against missile attacks. When completed, the mountain cavern will cover an inner area of 100,000 square feet—roughly a little over 2 acres—and will house 1,200 men in a safe place for the purpose of directing a missile defense program.

The underground command post (a joint project of the United States and Canada) will receive radar data, send out national alerts, guide all enemy missile interceptions, and will be under the direct command of the President of the United States and the Prime Minister of Canada.

The military is not alone in considering underground shelters a necessity in this space age. Jack Galt of Cincinnati, executive director of the Ohio Valley Civil Defense Authority, is asking 1 million Ohio families to build their own nuclear fallout shelters.

At Pleasanton, Calif., in November, 17 naval officers and civilian engineers completed a 72-hour experimental stay in a tomblike underground shelter built at a cost of $22,000. Emerging unshaven and unbathed, the men said they experienced no pain and no strain as they lived on survival rations, a minimum of water, little exercise, and no piped-in entertainment.

In 1958 the Rand Corp. made a study of nonmilitary defenses. In a subsequent report they estimated that due to lack of deep shelters and fallout shelters half of the population of the United States would be killed in an atomic attack. They concluded the report with a suggestion that a $200 million study be made to determine means for the ordinary citizen to protect himself, his factories and goods in underground hideouts.

Thus, the list of those interested in promotion of underground shelters is endless and a renewed interest in survival caverns has taken place since Representative CHET HOLIFIELD, Democrat, of California, posed a hypothetical problem to the Office of Civil Defense (OCD). So that a specific study could be made of fallout dangers, the problem assumed an enemy attack would be made on the United States October 17, 1959, at 7 a.m. eastern standard time. Seventy-one target areas were listed in the problem and it was based on a realistic assumption that could definitely be expected to occur in case of an all-out enemy missile attack.

After careful study of population, weather, and other factors in the target areas on the specified date, Eugene J. Quindland, Deputy Assistant Director of OCD, released an estimate that 48.9 million men, women, and children would perish and 28 million others would be injured.

Terrible as the figures sound, Gov. Nelson Rockefeller heaved a public sigh of relief since previous estimates by experts Dr. Charles Shafer and Dr. William Kellog were as high as 108 million casualties in the United States and, of course, New York City would have the highest percentage.

Fantastic as it may seem, underground shelters may prove to be the 20th century version of Noah's Ark. They may be the means of saving a remnant of the people from fire instead of flood.

From both a military and civilian standpoint the Nation might well look to Kansas for some really king-size underground shelters. Already existing in Kansas are several underground Noah's Arks that by comparison make the Norad Cheyenne Mountain headquarters and Noah's Ark of Genesis seem as small as a mustard seed.

The underground Noah's Arks of which I speak are the Kansas salt mines, any one of which could not only house, in safety and comfort, the 1,200-man staff of Norad headquarters but the entire staff of the Pentagon plus several thousand civilians.

Before the tremendous potential of Kansas salt mines as safety shelters can be realized the inherent fear of mines harbored by most of the people must be abated. That is part of the purpose of this article.

Generally speaking, people are frightened of any space deep in Mother Earth's lap. This fear is largely because of mine disasters which make sensational news when they occur. But, a Kansas salt mine by no stretch of the imagination is comparable to most mining operations from a safety standpoint.

There is perhaps no place on earth (or in earth) safer from either a natural or a man-made disaster than a well-worked Kansas salt mine. This observation is no spur-of-the-moment comment but is made in all seriousness after numerous trips by the writer into various salt mines during the past 2 years and in which dozens of miners were interviewed at their daily task. I think most people would agree it is the safest place on earth if they would take a look with their own eyes as I have many times.

Unlike most mining operations, there are no heavy timbers or steel beams used for shoring up the overburden in a salt mine. The overburden is solid rock and presents no cave-in or shifting problems.

Salt deposits, compressed into solid rock by extreme pressure, were laid down by evaporation from an ancient midland sea some 200 million years ago. The layer varies in thickness from 300 to 400 feet. The Kansas salt beds form a subterranean "Rock of Gibraltar" in about two-thirds of the State, or an area about 200 miles long and 100 miles wide. The same salt beds extend south to the vicinity of the Gulf of Mexico. This single salt deposit contains an estimated 30,000 billion tons, world's largest known salt deposits, and even though a million tons are taken annually the salt beds have barely been scratched.

For purposes of this discussion, we will cite statistics mostly from a single mine, the American salt mine at Lyons (Rice County), Kans. This mine, an even 1,000 feet deep, is as comfortable and clean a place to work as can be found most anywhere.

When interviewing Jim Dinsmore, American Mine foreman, after he answered a long series of questions concerning comfort and safety in the mine, he added a touch of humor with, "Besides, we never get sunburned, and with a ceiling 1,000 feet thick, we're never bothered with a leaky roof." That simple statement points up a situation realized by few people. Salt mines do not have the many common hazards of other mining operations. There is no explosive gas or dust to contend with. There is no bad air. Everything—over, under, and around for hundreds of feet—is fireproof. Not only fireproof but solid. It takes dynamite to blast the rock salt into chunks so big mining machines can handle it. Even after dynamiting many chunks are still too large to handle and must be broken up with pneumatic jackhammers.

The salt beds are both underlaid and overlaid with shale rock. Thus the 1,000-foot-thick ceiling of the American Mine is composed of solid rock in one form or another to the extent of more than half of its thickness.

Casualties in this salt mine are almost nonexistent. Safety record of the American Mine underground is much better than their above ground operations. In 40 years of continuous operation there has been but one fatal underground accident and one serious one in which a miner lost a leg. Both accidents resulted solely from human error and improper use of dynamite. Considering the vast amount of blasting done in 40 years with a weekly usage of 1,250 pounds of dynamite. Where on earth can you find a safer place to work?

Salt miners are a happy lot with no apparent need for relaxation on a psychiatrist's couch. This can be attributed in part to their near perfect working conditions. With a constant temperature of 70° F. and unchanging relative humidity of about 25 percent one can walk briskly in the mine without perspiring. Or in case of a visitor, if you choose to just sit and look you remain comfortable in shirt sleeves.

There is only a gentle and soothing movement of the warm air * * * except at quitting time when more than one-eighth of a ton of dynamite is set off to provide loose salt for the next day's operation. The first time you experience this blast without warning as I did it is frightening. But after surviving your first experience of a huge dyna-

mite charge in a salt mine you are more convinced than ever that it is a safe place to be. The only sensation is that of a tremendous boom, followed by a sudden blast of air past you. Nothing else moves from the force of the explosion because of the extreme solidarity over, under, and around for hundreds of feet.

A stroll through a salt mine in shirtsleeves, regardless of outside temperature, is for some reason both restful and invigorating. Maybe it's because the tangy salt air reminds one of the seashore.

The mine is also clean. Miners emerging after an 8-hour shift are not the grimy looking specimens of which most of us have a mental picture. They carry no more dirt home to deposit on the living room rug than does an executive who spent his working day in a plush office.

Now we've pointed out some of the safety and comfort factors—what about available space for the military or civilians from a civil defense standpoint? In contrast to the approximate two acres of floor space in NORAD headquarters in Cheyenne Mountain, 580 acres have been mined at the Lyons location.

Actually only about two-thirds of the 580-acre area is available as floor space. One-third of the rock salt is left for supporting pillars. With 1,000 tons of salt removed each day, before this can appear in print the usable underground area will exceed 400 acres. Furthermore, within a stones throw, if you could throw a stone through solid rock, is another salt mine (not in operation) containing 55 miles of tunnels. Thus, a few sticks of dynamite and the two mines could be interconnected underground making them into a still larger single unit.

In addition to the fabulously large mine caverns at Lyons, Kans., there are mines at Hutchinson and other nearby towns almost as large. As the crow flies, or in this case, as the mole burrows, Hutchinson and Lyons are about 20 miles apart. If the Federal Government or OCD desired additional underground space but still in an interconnected single unit, the Hutchinson and Lyons mines could be connected at an insignificant cost when compared to other underground construction.

To bore a tunnel from the American mine at Lyons to the Carey mine at Hutchinson would simply require subsidizing the two companies to shift their mining operations to the area between the two widely separated mines. This would involve the laying of additional narrow-gage railroad trackage and longer underground hauls for each company than their normal mining operation. However, there is little doubt but what the two salt companies would gladly dig a connecting tunnel if they were reimbursed for the additional hauling costs because the salt thus mined would be marketable in their normal sales outlets.

Based on the present mining output of the two companies 2,000 tons of salt per day would be removed which would make rather rapid progress toward boring a connecting tunnel • • • and all this at no cost for the excavation other than the extra haul made necessary. Furthermore, the connecting tunnel could be as large or as small as desired. Salt is mined from the bottom of the deposits and normal operations take out a layer about 14 feet deep but if rooms or tunnels were needed with a greater height it would be just a case of blasting it out to desired dimensions.

The cost of a 20-mile subway (which could be equivalent to modern Interstate Highways if desired) would thus be only a small part of the multimillion required for a mere 2 acres excavation in Cheyenne Mountain. The access road to Cheyenne Mountain will cost another estimated $3 million whereas good hard-surfaced roads are already built to the salt mines mentioned.

ENTRANCE AND EMERGENCY EXITS COMPARED

In the Cheyenne Mountain Norad installation two entrances are to be provided. One will be a horizontal entrance and the other an elevator. Thus in a 2-acre space it is conceivable that one atomic bomb could permanently close both. It is doubtful if the 1,200 men trapped within could blast their way out without outside help. Even with outside help clearing the entrances or building new ones would be as time-consuming and costly as the original construction cost. By comparison here is where the salt mines are way out front.

Elevator entrances capable of lifting 1,000 tons each per 8-hour shift are already in operation at all of the Lyons and Hutchinson mines. Several more could be built in widely scattered areas for less than the cost of the access road alone to Cheyenne Mountain.

Then assuming that all mine entrances were known to the enemy and closed by a direct hit on each one it would be a simple matter to put down a shaft at a secret place in any selected tunnel. With the shaft constructed and cemented watertight, it could then be filled with rock salt almost to the surface of the ground. Then by placing a cement cap over the salt filled shaft and covering it with dirt an emergency exit would be concealed in the middle of a Kansas wheat field or grove of trees.

Complete elevator components would then need to be stored underground near the secret shaft. In the event all present entrances were closed by atomic attacks, simply by opening a valve the hidden shaft could be flooded with water. The brine thus formed would flow down the shaft to a disposal well taking the salt with it and leaving an open shaft without any help whatsoever from the outside—indeed, without even the use of any machinery or manual labor.

This is just a variation of an already common salt-mining operation whereby a hole is drilled into salt deposits from above and cased with a pipe within a pipe. Water is pumped down under pressure through the inside pipe, dissolving salt which comes up the outer pipe as brine. By an evaporation process the salt is recovered from the brine as table salt.

After clearing the shaft in this manner the already stored components of an elevator could be erected in exactly the same manner as in a modern skyscraper—from the bottom up. This simple method could provide for one or more widely separated emergency exits whereas in the Cheyenne Mountain 2-acre area it would be impossible to provide emergency secret exits from 2 to 20 miles apart.

FOOD—AIR—WATER

The person unfamiliar with salt mining will raise many questions about longtime survival if sealed up in such a vast underground space. Questions concerning the provision of comfortable living facilities for both the military and civilians including food, air, water, lights, and power are easily answered. But curiously enough, while the same problems apply to Cheyenne Mountain, they are more readily solved in the mine than in the mountain.

First, let us consider food. With area measured in hundreds of acres, a constant temperature and unchanging humidity, ideal storage is already provided for tremendous quantities of foods. For those needing refrigeration it would be simple to install, operate, and maintain huge refrigeration units. Enough space is available to store supplies for thousands upon thousands upon thousands of people for months.

As for water; the plumbing in a salt mine goes straight up. Water supply wells tapping vast underground water resources can be drilled straight up and cased. Thus simply by opening a faucet an endless supply of fresh water is available by gravity. Not even a pump is necessary and the water is so deep underground that it would never be contaminated with atomic fall-out.

In either a mountain or a mine, the power source should be electricity, generated by atomic energy which requires no oxygen for operation. Power and light facilities in either would be so similar that further discussion is unnecessary.

Providing air supplies for the vast reaches of the salt mines might seem like an insurmountable problem, but actually it is quite simple. First, considering air supply from a peacetime standpoint, where the outer air is not contaminated, ventilation is mostly by natural draft.

Following the simple law of nature, cool air settles and hot air rises. Thus, outside air by natural draft goes down one air shaft replacing the warm air rising in another shaft. Windmill fans are run in the mine to circulate air in dead-end tunnels. From this it can readily be seen that the greater the variance of the outside temperature to the 70 degree mine temperature, the better the air circulation within the mine. When outside temperature is also 70 degrees there is no natural draft and suction fans have to be employed to draw the outside air into the mine.

But what if the outside air is contaminated with atomic fallout? The air problem is still relatively simple. It is a known fact that the submarine *Nautilus* can remain submerged for a month or more. When it first submerges its hull encloses enough air to last the crew for one day. After this, either compressed air or compressed oxygen is released into the submarine to give the crew good fresh air.

Thus if the mine entrances were sealed, the acres and acres of underground space would enclose a considerable volume of air which would last much longer than one day unless the space were packed as tightly with people as is the *Nautilus*.

The *Nautilus* carries its own compressors and can compress air to 2,500 pounds per square inch. Atmospheric air normally contains about 21 percent oxygen and the air we exhale contains about 16 percent oxygen and 4 percent carbon dioxide. Thus, if we were breathing in an airtight space as the case would be after an atomic attack, the air around us would gradually contain less and less oxygen and more carbon dioxide.

The removal of carbon dioxide from the air is very simple. Soda lime or lithium hydroxide spread on the floor will absorb the carbon dioxide. Tons and tons of either chemical could be stored in the mine for use when needed.

Also fabulous amounts of either compressed air or compressed oxygen could be stored in the vastness of a salt mine to supply fresh air for months for thousands of people. Not only can compressed air or oxygen be stored in the mine itself but it could be stored nearby in what is known as salt caverns. These are the caverns formed by mining by the brine method and when they reach certain dimensions they are abandoned in favor of another nearby location. The caverns when abandoned are full of brine. By forcing compressed air into these caverns the brine would be forced out (and salvaged for table salt) making more fresh air storage in Mother Earth's lap.

These caverns could be connected by underground pipeline to the mine area and by opening a valve additional sources of uncontaminated air or oxygen could be supplied to the underground survivors. Once stored in either mine or cavern (or both) the compressed air or oxygen would remain indefinitely until needed because peacetime work-a-day operation would utilize air by natural draft.

There is still another oxygen supply source already stored by nature and available to the mine. Water is H_2O (2 parts hydrogen, 1 part oxygen) and it is reliably reported

that the Navy has learned to extract oxygen from sea water and can even do so underwater. With the unlimited reserves of fresh water available to the mine by gravity alone if all other supplies were consumed the water could be made to give up its oxygen to the people underground. Life-sustaining water would also become life-sustaining air.

SOME SALT MINE RESEARCH UNDERWAY

The Federal Government is researching storing of atomic garbage in salt mines. Authorities believe it may prove to be the ideal storage for atomic garbage because of rock salt's tensile strength and impermeability. These same qualities of strength and safety make the mines an ideal place to store human beings in an underground Noah's ark and thereby save at least a remnant of the people from the Armageddon of atomic explosions.

Also private enterprise is presently preparing the salt mines for storage—principally for documents and valuables. Vaults and shelving are being installed to provide safe storage from either natural or man-made disasters. The storage is completely fireproof and hence nothing can burn except flammable contents. With airtight vault doors on some of the caverns even flammable contents cannot suffer serious fire damage because if they did catch fire the oxygen supply in the airtight compartment would soon be consumed and the fire would automatically go out.

The recent costly fire in the Pentagon would have caused insignificant damage if the Pentagon had been in a salt mine with provision made for closing airtight doors when the fire broke out.

CONSTRUCTION COSTS COMPARED

Construction costs in a mine are not exorbitant and underground living and working conditions could be made as plush as desirable at modest cost, in fact, much cheaper than in many above ground locations.

Liquid or powdered materials such as oil or cement can be poured down into the mine through a pipe not even an elevator is needed to take many materials into a mine.

Shale rock floors are already there since salt is mined from the bottom of the salt deposits. If shale rock is not suitable for floors the rock can be overlaid with saltcrete. Saltcrete is the same as concrete except the rock salt is used for aggregate instead of sand or gravel. Underground where the temperature and humidity never vary, saltcrete is reputed to be as durable as concrete. With the saltcrete components (water and rock salt) already underground, except for the cement, floors and walls can be cemented at less cost than above ground locations.

Mother Nature has already provided the heating and air conditioning system in the salt mines so there would be no installation cost for these items, not even any operating cost, winter or summer. Even radios work well in a 1,000-foot-deep salt mine.

If, as the Rand Corp. recommends, we should spend $200 million exploring the possible for the ordinary citizen to protect himself in atomic warfare, then high priority should be given to spending an infinitesmal fraction of the amount to study the salt mines for this purpose.

Where else on earth can you find shelters already built and comprising hundreds of acres; 1,000 feet underground; surrounded with 300 to 500 feet of solid rock; and all without cost to the taxpayer except a fair lease price and installation of materials and equipment?

Norad, OCD and Pentagon officials should make a personal inspection tour of the American Salt Mine at Lyons, Kans. They would be amazed at the tremendous potential for providing underground Noah's Arks—at a very minimum of expense.

The 20th century will undoubtedly be recorded in history as the era when man occupied outerspace. It may also be remembered as a time when man inhabited the earth like a gopher.

Superhighways

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the importance of superhighways to our urban, suburban, and rural areas cannot be overemphasized today. We depend upon them for a large part of our commerce and a great deal of our leisure pleasure. Each new major road should be an asset to a region and to the entire Nation.

And yet, it is becoming clearer with each passing year that all such road-building projects should be built as part of an overall plan. Citizen interest should be put to work in constructive fashion.

D. Louis Tonti, executive director of the New Jersey State Highway Authority, recently described in vivid fashion some of the difficulties which arise when local roads and superhighways supplement each other. He was describing the Garden State Parkway and the New Jersey Turnpike. Although these highways are toll roads, the conditions Mr. Tonti describes could increase as our Interstate Highway System gradually increases each year. I think that his words deserve careful consideration.

Mr. President, I ask unanimous consent that a news story which appeared in the Bergen Evening Record of April 25 be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LINKS TO SUPERROADS HELD KEY TO PROBLEM—SECONDARY ROADS ARE NOT KEEPING PACE, PARKWAY CHIEF TELLS SEMINAR

MADISON, April 25.—A superhighway doesn't solve all the traffic problems in its area, said D. Louis Tonti of Paramus, executive director of the State highway authority.

TALKS TO SEMINAR

Tonti was among those who addressed more than 100 planning board members, realtors, bankers, industrialists, and lawyers at a seminar sponsored Saturday by Fairleigh Dickinson University and the New Jersey Federation of Official Planning Boards.

Tonti said the Garden State Parkway and the New Jersey Turnpike represent the greatest contribution to the transportation needs of the State since World War II. He said there is an obvious incompatability between the modern superhighway and the county and State road built 25 years ago.

The superhighways are full of potential, but the inadequate arteries leading to them are hampering their usefulness, he declared.

Ratables in the 10 counties served by the Garden State Parkway increased $846 million, which is four times more than those in the 11 counties the parkway doesn't serve, Tonti reported.

Tonti said: "In today's economic society the formidable opposition to regional planning is dangerous because it obscures the vision and destroys the capacity of the average citizen to appreciate the fine works of their planning boards.

"All too often desperately needed improvements are delayed because municipal boundaries circumscribe the kind of provincialism which is out of step with regional characteristics of our society," the guests were told.

George Dieckmann planning director of the Bergen County Planning Board, told the group that unless more arteries are built in the area of shopping centers, traffic is going to strangle itself.

He said there are 96,000 movements of traffic each day at the two centers along Route 4. If the population of Bergen County increases, or the popularity of the centers increases, he said, roads leading to the centers will be unable to handle the traffic.

Dieckmann suggested marginal routes be built on the north and south sides of Route 4 to give better access to the two centers. He said it was impossible to widen Passaic Street, which will eventually hurt one of the centers.

Dieckmann said Bergen needs more roads before it chokes on its own traffic problems. He said the only way to get what the county needs is for all the towns to work together in solving the traffic problem.

The Use of Food for Peace

SPEECH
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. EDMONDSON. Mr. Chairman, one of the great tragedies of our time is the waste of American surplus food in a world in which one-half of the people go to bed hungry every night of the year.

That tragedy is compounded by the strange fact that we pay out more than a billion dollars a year for storage and related costs of handing this surplus food.

It is literally true that we could give away much greater portions of this food surplus, to the hungry people both inside our own country and abroad, and save money in the process.

In recent years we have made progress toward a more intelligent disposal of this great food surplus, which is one of the richest blessings our country enjoys. Millions of American children, and additional millions of people all over the world, have benefited through our surplus food disposal programs.

The amendment offered by the gentleman from Iowa is an attempt to take a further step toward intelligent and effective use of this great weapon for peace—America's food surplus.

Most of the objections made to the proposal are either technical or haggling in nature; there is no real heart in the opposition to this amendment, and no real reason for the opposition, either.

I hope the amendment will be adopted, and commend its author for the fight he has consistently waged to use America's surplus food in the cause of peace.

Seventh International Soil Science Congress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 28, 1960

Mr. WILEY. Mr. President, during 1960, the Seventh International Soil Science Congress is scheduled to be held at the University of Wisconsin.

I am particularly delighted and proud that this congress is meeting at a university—and within a State—that has contributed so much to progress in agriculture.

For the conference, about 1,500 to 2,000 delegates are expected to be in attendance, representing almost every country—including the Soviet Union—that has diplomatic relations with the United States of America.

Under the auspices of the International Society of Soil Science, these conferences are held on the average of about once every 5 years, alternating from country to country.

Historically, the first congress was held in Washington, D.C., in 1927.

Topics for discussion—including scientific papers presented by leading soil scientists—will include physics, chemistry, microbiology, fertility, mineralogy and other subjects significant to progress in agriculture.

Recently, I was privileged to receive from Prof. Emil Truog, manager of the Soil Science Congress, a résumé of the program for the upcoming meeting scheduled for August 15–23, 1960.

Reflecting upon a constructive international effort in agriculture—in which we need not only creative efforts to resolve problems of production, but also of distribution—I ask unanimous consent to have excerpts from a leaflet outlining the program for the conference printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SEVENTH INTERNATIONAL SOIL SCIENCE CONGRESS, AT THE UNIVERSITY OF WISCONSIN, MADISON, WIS., AUGUST 15–23, 1960

The Soil Science Society of America invites the soil scientists from all countries having diplomatic relations with the United States to attend the Seventh International Congress of the International Society of Soil Science in Madison, Wis., August 15–23, 1960. This Congress is sponsored by the Soil Science Society of America. The first International Congress was held in Washington, D.C., in 1927. Subsequent Congresses were held in the U.S.S.R. in 1930, England in 1935, Holland in 1950, Belgian Congo in 1954, and France in 1956.

The International Society now has about 3,000 members located throughout the world. Lately, interest in soil science has greatly increased everywhere as leaders recognize its close connection with food production, health, and the promotion of peace. The United States is producing a surplus of practically all its major agricultural products. This unusual situation is of great interest to the leaders in countries confronted with chronic shortages of food. Accordingly, there is a widespread desire among soil scientist of many other countries to come to the United States to observe our soils and study our methods of fertilizing and cropping them so as to get high production.

At the forthcoming congress, about 400 scientific papers will be presented by the world's leading soil scientists (about 50 from the U.S.S.R.) before an audience of 1,500 or more, representing the seven sections or commissions of the society; namely: (I) soil physics; (II) soil chemistry; (III) soil microbiology; (IV) soil fertility; (V) soil genesis, classification and cartography; (VI) soil technology; (VII) soil mineralogy.

Publications: In lieu of precongress publication of papers, all authors should have submitted by January 1, 1960, an abstract or factual and informative summary including, if desirable, data in the form of graphs and tables. The space limitations (including graphs and tables) are two sides of a sheet 8½ by 11 inches in size (22 by 28 cm), typewritten and double spaced (500 words or equivalent in space). These will be bound separately by commissions and available on registration at the congress. They will be accepted and reproduced in English, French, or German but are not to be considered as a part of the official congress literature.

The completed papers (each not over 3,000 words long) received by July 1, 1960, will be accepted and orally presented in English, French, or German. They will be published in the language presented in five bound volumes by early 1961. Prof. M. B. Russell, Department of Agronomy, College Agriculture, Urbana, Ill., is chairman of the program committee and all correspondence regarding presentation and publication of papers for the congress should be sent to him.

Tours: Field study tours have always been one of the outstanding features of these international meetings. They provide an opportunity to observe and study the soils of the host country in their natural setting. A representative committee under the chairmanship of Dr. Charles E. Kellogg, Chief of the National Soil Survey of the United States of America, has worked on the details of these three tours since 1956, and has prepared a tour manual for each tour which will be given to tour participants. The tours will provide an opportunity to study the more important soil types along the route, the agriculture which has developed on them, and the agriculture research and educational institutions serving each area. Travel will be in chartered air-conditioned buses. Whenever possible overnight stops will be made in college towns where dormitories provide rooms and food at reasonable cost. None of the tours will be repeated (run in reverse direction).

Field tour 1: This precongress tour is mainly for those entering the United States at New York City, where it will start from the Governor Clinton Hotel at 8:00 a.m. on August 5 and end at Madison, Wis., on August 13, covering a period of 9 days and a distance of about 1,929 miles. There will be overnight stops at Ithaca, Brookport, and Jamestown, N.Y.; Wooster and Cambria, Ohio; Lafayette, Ind.; Urbana, Ill. (2 nights); ending at Madison, Wis. The experiment stations at Ithaca, N.Y., Wooster and Coshocton (erosion control), Ohio, Lafayette, Ind., and Urbana, Ill. will be visited.

Stops will be made at Niagara Falls, and farms representing varying kinds of agriculture, including a peat farm, fruit farms, and the grain and livestock farms of the Corn Belt. Representative soil profiles will be examined en route, including the Sol Brun acide, gray-brown podzolic, Brunizem (prairie), and associated hydromorphic soils. The estimated cost, including travel fare, room, and meals, but not costs at the Governor Clinton Hotel in New York City, will be close to $110. There is no limit to number of participants for this tour.

Field tour 2: This postcongress tour, August 24–September 3, will go from Madison to Washington, D.C., via the Southern States, a distance of about 1,950 miles during 11 days with overnight stops at Monmouth and Springfield, Ill.; Sikeston, Mo.; Memphis, Tenn.; Nashville and Knoxville, Tenn.; Ridgecrest and Raleigh, N.C.; Orange, Va.; and Washington, D.C. Stops include observation of watershed projects, a dairy farm, a delta plantation with mechanized cotton and rice production, a bluegrass farm, a hardwood forest, the agriculture of the Mountain and Piedmont areas, and tobacco and peanut production on the Coastal Plains. Points of interest will include a margarine factory, a cigarette factory, and the TVA fertilizer plant. Soil profiles of the major kinds of soil encountered will be examined en route, including gray-brown podzolic, Brunizem, planosol, red-yellow, podzolic, reddish-brown lateritic, and related hydromorphic soils. Several experiment stations will be visited. The estimated cost, including travel fare, room, and meals, will be close to $140. This tour is limited to 125, of which only 25 may be citizens of the United States and Canada, if total of others reaches 100. Tour applications will be accepted in order of their receipt.

Field tour 3: This postcongress tour, August 24–September 7, 15 days, will go west from Madison to Berkeley, Calif., a distance of 3,200 miles. There will be successive overnight stops at Ames, Iowa; Lincoln and McCook, Nebr.; Fort Collins, Denver, and Colorado Springs, Colo.; Albuquerque, N. Mex.; Flagstaff and Prescott, Ariz.; and Riverside, Fresno, and Berkeley, Calif. The tour will provide views of many scenic places, including the Grand Canyon. A corn-soybean hog farm, a watershed farm, forestry and range stations, and various experiment stations, including the Salinity Laboratory at Riverside, will be visited. A good opportunity will be provided for observing and studying dryland farming, irrigation, and the management of saline and alkali soils. There will be stops en route to examine the major kinds of soil, including gray-brown podzolic, brunizem, planosol, chernozem, chestnut, calcisol, grumusol, reddish desert, and noncalcic brown soils. The estimated cost, including travel fare, meals, and room, will be close to $200. This tour is limited to 125, of which only 25 may be citizens of U.S.A. and Canada if total of others reaches 100. Tour applications accepted in order of their receipt.

Local tours at Madison: To provide an intermission and relief from the confinement of lecture room activities, Thursday, August 18, will be devoted to tours in the vicinity of Madison. The main tour by bus (not designed for wives and children) leads from Madison to a nearby pushbutton hybrid seed corn and livestock farm. The next stop will be at the new University Experimental Farm, where fertilizer and other tests, particularly with corn, will be inspected. From here the tour leads to a large sand area in central Wisconsin where the Hancock Experimental Station is located. In this area, the ground water level is within about 15 feet of the surface, providing ideal conditions for irrigation which is extensively practiced at this station and surrounding area. Fertilizing and cropping practices adapted to sandy soils under irrigation will be observed and studied. The return route to Madison will provide opportunity for examining soils and farming practices, and viewing scenic

landscapes. The travel by bus and noonday lunch will be provided without charge.

Other tours in the vicinity of Madison are being arranged for Thursday and other days for those groups particularly interested in soil classification, forestry soil management, ecology, glaciation, and significant natural formations.

Exhibits: Space (about 20,000 square feet) is being provided for exhibits of wide interest to soil scientists, including soil maps, soil monoliths, scientific instruments, books, journals, equipment for irrigation, fertilizer placement, etc. All communications and inquiries regarding exhibits should be addressed to the chairman of the exhibits committee, Dr. O. J. Attoe, Soils Building, College of Agriculture, Madison, Wis., U.S.A.

Wallace Malone

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein several articles from a great newspaper in Alabama, the Dothan Eagle. We have some very dear friends at Dothan, Ala., the Oren S. Andersons, and just today I have received copies of the clippings from this newspaper, which has been writing about one of the greatest men I know. He is great in many ways. He has been so successful. He has been successful in raising a great family. He has been successful in business. He has one of the finest banks anywhere, and he has been operating this bank as long as I can remember. He was in the legislature there in Montgomery, Ala., the Capital of Alabama, where he made a wonderful success. He is in many businesses. He has an interest in the great Admiral Semmes Hotel at Mobile. I figure Wallace should give me a deed to that hotel, as I have paid for it many times, but it is worth it because it too is like one of its owners—a great hotel. Wallace Malone, I have known just always. I have known him so well, and I have never known a finer man, with more energy—a man that wants to do good on this earth, not only for the city of Dothan and the State of Alabama, but the whole Nation. These articles in this paper show where he has been traveling all over the earth and tell some of the things about this great man. I know my good friend, Congressman GEORGE ANDREWS, will wonder why I didn't let him put these articles in the CONGRESSIONAL RECORD, but Wallace is just too big for one great Congressman, and everybody knows that GEORGE ANDREWS is one of the greatest Congressmen in this Nation and in the Nation's Capital; but we all figure that we are just a part of Wallace Malone and his great work. Wallace Malone has been doing things as long as I can remember that will help all mankind. I wish that all of these people who are sitting here istening to me now, the men sitting in this room on the floor of the Congress of the United States, who represent every human being in America, could know my fabulous friend, Wallace Malone, of Dothan, Ala.

MALONE PLANE LANDS ON SOIL OF URUGUAY

(By Wallace Malone)

MONTEVIDEO, URUGUAY, January 19.—Uruguay is the smallest nation in South America—only a little larger than one of our States. As usual we were met at the airport by Government officials. The afternoon we arrived we were entertained by Ambassador and Mrs. Woodward. I found a man there who knew much about southern Chile and Patagonia. He was very reassuring concerning our proposed trip and wanted to go himself.

The people of Uruguay, like the Swiss, have always been ready to defend themselves against attack. Since Montevideo was for years the only deepwater port in this part of South America, it was attacked by Brazil, and later by Argentina.

During the middle of the last century the British attempted to capture and hold the port. Small as it was, Uruguay successfully defended herself. After the mouth of the Plata River was dredged, ships could go to Buenos Aires, which has now become the metropolis of South America. Montevideo is in third place.

It was here that the British Navy sank the German raider, the *Graf Spee*, during World War II. The *Graf Spee's* guns had the longest reach and should have been able to protect itself.

The reputation of the British Navy caused the German ship to retreat up the river where it stranded. After sending his crew ashore to be interned and sinking his ship, the *Graf Spee's* captain committed suicide. He had destroyed hundreds of Allied merchant vessels before the British got him.

Uruguay, like Brazil, is suffering from inflation. Business is off. Salaried people have a hard time making ends meet. The Government is trying to do much for everybody, much more than it is able to do. Uruguay has no president, but is governed by a nine-man council responsible to the people.

NO INCOME TAX

There is no income tax—can you believe that? The government is largely financed by taxes on gambling, which is present everywhere in many forms. The government owns the gambling casinos and makes a big profit from them. All luxuries, automobiles included, are heavily taxed. Twenty-four percent tax, for example, is added to hotel bills. Until lately Uruguay had the most radical social laws of any South American country. Early retirement and wage and hour laws. People do not work as they should. The astounding economic recovery of West Germany, which has no 40-hour week, should be a lesson to Uruguay—and to us. German-made goods are everywhere here.

WOMEN ARE PRETTY

In respect to racial origins and general outlook, the Uruguayans are very much like us. Spanish, English, Italian, German, and Irish stock. No Negroes. Physically, however, they are smaller than Americans. Prettiest women we've seen.

Referring again to the high cost of living caused by inflation, I talked to a Hungarian refugee, a woman of 44, who is cashier at a small shop in our hotel. When the Russians invaded Hungary in 1945, she fled to Paris, got away by the skin of her teeth. She is small, attractive, highly educated, unmarried and alone. Her family were all killed by a bomb during the last war. She says she can hardly exist on her salary—lives in a basement with only one window.

BEGS FOR HELP

She has been trying for 14 years to get to the United States. She begged me pitiously to help (not financially). Vowed she would scrub floors or do anything. I told her that the streets in the United States were not paved with gold and that there were always people without jobs. She said she had toured the United States before the family lost all to the Communists. The immigration quota for Hungarians is full. There is a long waiting list. She has no idea where she stands and has almost lost hope.

I was touched and promised at least to find out how far down the list her name appears, or if her application reached Washington. I told her that if she would marry an American she could enter quickly. But she said she would never marry except for love.

SCHOOLS ARE POOR

Another case is a handsome young Belgian with a wife and attractive children. He came here after the last war with money. Bought a ranch, raises cattle and fine horses, wants out badly. Schools are poor, he says, and he lost all he has except the land, trying to get to Canada. I have since found out that many Belgians who collaborated with the Nazis during the German occupation fled to South America and to Canada to escape punishment.

In addition to the floods last year, Uruguay is now in the throes of a severe drought. While I am strongly opposed to our giveaway program, it would seem that if we are foreign aid bound, perhaps more money should be channeled to such friendly neighbors as Uruguay instead of sinkholes like India, Africa, Communist Yugoslavia, and Poland.

We might at least send a couple of battleships to help the local powerplant for a while. So it goes. There is much trouble in this world.

While Americans are popular here and in Brazil, I have heard this is not so in Argentina. We will soon find out for we leave in a few minutes for Buenos Aires.

MALONE PARTY MAKES HIGH ANDES CROSSING

(By W. D. Malone)

SAN CARLOS DE BARILOCHE, CHILE, February 9.—We crossed the high Andes today, although the road wound through a pass—never over 3,500 feet above sea level. Though very high, some being snowcapped, these mountains are rather dry on their eastern side, not much vegetation except in the valleys, many small streams. Wish we had time to fish.

Between Villarrica and here we had to cross the border and go through the Argentine Customs. This is frustrating anywhere, especially at a mountain outpost. On the way to the border we came to a ferry. The ferryboat had just left, but on seeing us, it turned around and came back much to the dismay of two carloads of American women already on board. We thereby saved 1 hour, although we lost it later.

There were 5 or 6 women mostly from California, 1 man and an attractive young Chilean guide whom we had met at Temuco, Chile. These people were on a tour by air; but by reason of an Argentine airline strike they had to use automobiles furnished by the touring agency, who doubtless lost plenty on that trip.

PRESSED FOR TIME

We didn't make it to Bariloche that night, but had to stay at a small town right in the heart of the mountains. We are beginning to be pressed for time as I have to be in Punta Arenas by the 17th to catch a biweekly plane. Otherwise I will lose the benefit of a roundtrip ticket and may have to stay another week.

The Argentine roads are much better than those of Chile so we got here around noon the next day.

San Carlos de Bariloche is the mountain resort town of Argentina. Many tourists and resort hotels, souvenir shops, etc. We have managed to get hotel rooms. Duke and I usually have had to occupy the same room—and they say I snore, which I doubt.

GIVE CLIMBERS LIFT

At the border we picked up a couple of medical students from Buenos Aires, who had come to do some mountain climbing—with just barely enough money to get back home. A young man and a girl in their early twenties. Neither was married but they had taken a 3-week jaunt. They had no look of romance. The girl was badly sunburned—or snowburned. The man had a 2-week growth of beard. Both were badly travel worn. They, with 14 others, had climbed one of the highest Andean peaks and were trying to get back to Buenos Aires. They were pathetically appreciative during the 2 days. On parting at Bariloche they bought us some candy.

February 12: According to plan Roberta will fly home this afternoon to meet her husband returning from a Navy cruise across the Atlantic. Duke has been ill for several days. I think he should not try to make the 1,000-mile trip to Punta Arenas. He agrees, so I have hired a man born in Switzerland and an experienced guide to go with me the rest of the way. He is in his late thirties and has lived here many years. He has good recommendations.

So we three part this afternoon. Werner, my guide, and I leave for Patagonia, a wild country; and we hope to reach Punta Arenas, the extreme end of South America, in 4 days.

ESQUEL, ARGENTINA, February 13.—This frontier mountain town is 200 miles down the Andes south of Bariloche. It took from 3 p.m. until 10 p.m. to drive it, including stops for gasoline and photographs.

About halfway here a rock hit our gas tank and it sprung a small leak—as once before. We had previously been told that soap or chewing gum would temporarily remedy the trouble. At the next filling station I bought several packages of gum and we set about chewing it as fast as possible. Later we applied the gum. We then drove merrily on to this forsaken village.

The scenery and the roads are splendid, but the hotels are simply awful. At dinner last night a fly was cooked with my meat.

MOTOR CONKS OUT

We checked out at 1 p.m., drove about a block and the motor failed. This being Saturday afternoon, no one works. Tomorrow, is, of course, Sunday (two lost days). We went to the home of the mechanic who had worked on the car and talked him into coming to see the car. It developed that my fine guide (who, it seems, drinks a quart of wine at a sitting) is an alcoholic. Instead of filling the tank with gas, he let the gas station attendant fill it with 15 gallons of fuel oil. Well, it took 2 hours to get the motor and carburetor cleaned and the tank drained. It was all I could do to hold my temper.

IN TIGHT SPOT

Although he doesn't know it, Werner, the guide, has me in a tight spot. I can't afford to let him go, as I could not find anyone else who speaks English or could get off to make the balance of the trip. I will work it out some way, I guess.

For working the 2 hours on Saturday afternoon, the mechanic would not let us pay him anything. Fortunately I brought with me some children's toys and playthings, which I bought at a 10-cent store in Dothan. So when there are children around, as in this case, I distributed them. The mechanic had a boy about 8 years old with him. The best investment I ever made. We are leaving now—3 p.m., as usual.

TRAVELER MEETS AN OLD FRIEND NEAR VALPARAISO

(By W. D. Malone)

SANTIAGO, CHILE.—As my daughter and I were getting on the bus leaving Vina del Mar (a seaside resort town near Valparaiso), our friend, Mr. Gutierrez, the former United Nations delegate from Chile, rushed in and asked us to get off. This man, who lives in Santiago, had driven his car all the way from there—125 miles—and insisted we stay over another day to let him show us around. Valparaiso was his former home. He had a cottage at Vina del Mar where his wife was spending the summer while he worked in Santiago.

We didn't get to meet his wife, but he drove us all over town and over many miles of beachfront. Being far south of the Equator, in summer here it is after 8 o'clock before it gets dark. Afterwards we had Mr. Guitierrez to dinner at an exotic restaurant perched on a big rock overlooking the harbor. It was after 11 o'clock when we parted.

EXAMPLE OF HOSPITALITY

I mention this only as an example of the hospitality we have experienced.

Mr. Gutierrez, a lawyer, is extremely well-informed about U.S. politics and has decided opinions about Roosevelt, Ike, Stevenson, Rockefeller, Humphrey, and others. When he realized Malone was an Irish name, he quoted Bernard Shaw, who said that "the Irish don't know exactly what they want to do—but they want to do it right now." Commenting on Russia's lead over the United States in the missile race, he said, "Well, it's because Russia's Germans are smarter than your Germans."

Since all of his opinions coincide with mine, I consider him smart.

We returned to Santiago the next morning by bus. Since this was the weekend (no work on Saturday or Sunday), the jeep was not ready to travel until the afternoon. It must have been dropped from the unloading derrick onto the dock—as it was damaged in several places. Spent the day replacing the tools, spare parts and camping equipment which was stolen while in the Customs warehouse before we arrived. This took exactly all day.

MANY CLIMATES

Because of its 3,000-mile length, Chile has many different climates and soils. The northern part is a desert. The middle, around Santiago, is a fertile valley with some rain in season but depends on irrigation. The snowbed short streams furnish the water. The Spaniards were ideal people to settle Peru and Chile. Since Spain is a dry country, they already knew how to irrigate when they came here in the 16th Century. The southern one-third of this country is mostly islands and very damp. The rainfall averages 100 inches per year. Only 2 months of good weather—a dreary land. There are many German settlements in southern Chile. The Araucanian Indians also have their homes there. These Indians were very courageous and have only recently been controlled and pacified. Southern Chile has tremendous virgin forests.

LITTLE FOOD RAISED

Because of the aridity of most of the cultivatable land, Chile does not grow enough food—about one-half of all food consumed has to be imported. For instance, Chile imports Irish potatoes from Denmark, which is not one-twentieth as large as Chile. This is compensated for by the export of minerals, such as copper and nitrates. Before the synthetic method of making nitrogen from air, Chile had a monopoly on nitrate of soda for fertilizers and explosives. Synthetic nitrogen nearly ruined the nitrate of soda industry. When it does get water, the central valley is very productive and grows nearly every known crop. Farming methods are rather old fashioned. The farms are owned by a few people and are quite large. As in Argentina, by far the larger part of the population lives in towns and cities.

All of the Latin peoples in South America love night life. The usual hour for the evening meal is 9 p.m. Bedtime is 11 p.m. or later. Stores open at 9:30 a.m. and close from 1 p.m. to 4 p.m. The night closing time is 8 p.m. This is most inconvenient for shopping tourists—always in a hurry.

You simply cannot hurry these people. The smallest transaction becomes very complicated. Patience is a supreme virtue here.

Duke, my companion, my daughter, and I leave tomorrow morning—early we hope—for the south. We've never yet been able to get off any time near the planned hour. For an early departure one should check out at the hotel cashier's window the night before. Our route is 600 miles south, in Chile—thence over the Andes into Argentina where 1,200 more miles await us. Little paved road, though good hotels, we hope.

LONG WAY FROM HOME, MALONE COUNTS WOES

(By W. D. Malone)

PUNTA ARENAS, CHILE, February 22.—This was the day I hope to get back home but I am a long way from Dothan, Ala. According to the map, it seems to be about 7,000 miles by air, but much longer the way we came. The map also shows that South America extends much farther south than any other continent.

We are far south of the southern tip of South Africa, Australia, or New Zealand. As a matter of fact, if I had a plane I could fly to Antarctica in 3 or 4 hours. We are nearer there than we are to Buenos Aires. The only land between Punta Arenas and Antarctica is the island of Tierra del Fuego. I have been promised a plane trip to a town on that island—weather permitting.

POPULATION ONLY 30,000

Punta Arenas, which means Sandy Point, has a population of 30,000. The soldier at the Customs on the Argentina border 100 miles east of here told us the other night that the population was 3 million.

After sleeping most of the day of our arrival. I went to find the jeep dealer to see the prospects of selling what is left of it. He had a good Scotch name of Mario McLean (McLain is usually the way it is spelled in English).

I felt that since he was a Scotchman he would help me make a good trade. To my surprise I found that he was rather discouraging. This being a free port and there being no Customs duties to pay (as in the rest of Chile), and also because there is no U.S. Federal automobile tax, you can buy a new jeep here as cheap or cheaper than you can in the States. He didn't see the car but I described it to him. He has promised to try to help me sell it. The Peruvian who was also going to help me took a good look at it and he didn't come back. While it doesn't look good, all the running gears and the motor are practically new and it has many more years of life ahead.

ATTENDS ROTARY MEET

On Saturday I attended the Punta Arenas Rotary Club meeting at the hotel upon the invitation of my friend, Mr. Arthur. The meeting began at 1 o'clock and lasted 3 hours. There were many prominent people there for one reason or another. I was introduced to an admiral of the Chilean Fleet, the governor of the state, the mayor of the city and other distinguished people. There was one talk on space medicine by a member of the Chilean Air Force. Part of what he said was translated to me by my friend. The meeting lasted 3 hours and nobody seemed to be tired as such a meeting is not at all unusual.

I told one of my best jokes (which probably hadn't yet reached Chile), that I hoped would be humorous. I also told them I came to Patagonia looking for a place to park

my car and I hoped the authority on space would figure out some way to park cars in space, sooner or later. Whether through politeness or not I would get quite a few laughs. I, of course, brought them greetings from Dothan's civic clubs and from the United States.

They had evidently had another American visitor because a Rotary banner, bearing the name of a small town in Ohio was on a stand in front of my seat. I was just getting warmed up when I heard the bell tap and I sat down promptly. Pardon me if I mention the fact that I did get a reasonable amount of applause, further politeness. There is no question whatever but that our international civic clubs are doing wonderful public relations jobs for the United States. Doubtless more effective than the billions and billions we have given away, and this good will doesn't cost anything.

HOMESICKNESS STRIKES

Yesterday, Sunday, I was very lonesome. There was nothing to do but listen to the wind and hang around the hotel. About 7 p.m.—broad daylight—I heard some distant chimes. I listened intently and realized that the tune was that of "Jesus, Savior, Pilot Me." I just didn't believe I would hear chimes playing that song in this Catholic land. We had heard many church bells but no chimes.

I walked toward the music on unpaved sidewalks up a steep hill. When I was something over half way, the tune changed to "Lead Kindly Light." After climbing seven blocks, I came to a little church on a side street and entered. There I saw a blond young man about 6 feet 2 inches speaking in Spanish to an audience of 25 to 30 people. He introduced another man who had the appearance of an evangelist, but was a Chilean, and appeared to be of pure Spanish blood. The second man preached a sermon for about 45 minutes (too long) and although I couldn't understand any of the words—he was certainly a powerful speaker.

GREETS MISSIONARY

After the service I went up and introduced myself and found his name was Clyde Tucker. He was from Virginia, and his wife, who was there, was from North Carolina. The other man was a visiting pastor from another part of Chile. The church was Methodist and was operated by the Foreign Mission Board of the Methodist Episcopal Church in the United States. I was invited over to have a simple Sunday night supper next door where the young pastor and his family lived in an upstairs apartment; clean but rather primitive and plain. My heart was really touched by this handsome young man devoting his life to religious work thousands of miles from his home and bringing his wife and children there to that desolate place to live. I have never had a more friendly and sincere reception and I got over my homesickness promptly.

GIVES JEEP AWAY

I decided to give the jeep to this little Methodist Church for use on Tierra del Fuego. I assume I could get around $1,000 for it but I had rather give it away.

The next thing for me to do now is to try to get a plane seat for Santiago. I have just visited the office of Lan Chile, the only airline which the Government owned. There is a plane leaving here for Santiago twice a week and the next one leaves tomorrow. The manager was very sympathetic but told me that they were booked up solid for 4 weeks in advance. This is a short summer and those who can want to get up to the capital for a little holiday.

This news really made me sick. I doubt my sanity after 4 weeks here.

STROKE OF GOOD LUCK PUTS MALONE ON PLANE

(By W. D. Malone)

SANTIAGO, CHILE, February 24.—While I have had some bad luck, yet I have also had enough good luck to last me the rest of my life.

When I wrote the previous article I was deeply concerned over getting started from Punta Areanas back home. Other than flying the only way is by ship and it takes 12 days to get here to Santiago. On top of that, no ship was due for some little while. I stayed around the airline office—next to the hotel—all day yesterday. I explained that I had a bad case of sore throat and was really not well. Much sympathy but no results.

HAD GOOD IDEA

Finally I had what turned out to be a good idea. I first made friends with a little girl back of the counter who was trying to learn English and whom Clyde Tucker, my Methodist friend, was teaching. As soon as she can speak well, she is going to have the thrill of being transferred to the Miami office. I told her I had some friends in Miami. The manager of Lanchile could speak some English and promised me he would do all he could to get me a seat on the next plane.

I asked him, "What is the longest ticket you have ever sold in this office?" He said they were mostly all to Santiago, but he had sold one to Lima, Peru.

I said, "I want a ticket to the United States," and he was very much impressed, as he gets a commission on each ticket.

He then said, "If any person with a reserved seat does not show up by 10 tomorrow morning I will give you his seat on the 2 p.m. plane."

Brother, I was there by 9:30 a.m. and at exactly 10 o'clock he came out and said everything was okay. I felt so lighthearted that I felt I could fly to Santiago myself that morning. I caught the plane and I am now back in Santiago after a 5-hour flight.

We flew here right on top of or just to the left side of the snow-capped Andes Mountains the whole 1,500 miles. On the other side was the blue Pacific Ocean since Chile is very narrow. I never expect to see such gorgeous scenery or feel so good.

VISITS U.S. CONSUL

So I am here now and have been to see the U.S. consul and the Chilean Automobile Association to help me get the right papers to transfer the jeep to the Methodist Church and get the title out of me and into them, as well as get straightened out regarding the importation of it.

The commercial attaché at the consul's office, Mr. Victor Algrant, was very helpful although he was really in high gear that day in preparation for the visit of President Eisenhower the first of the week. He hardly had time to talk but he called in an assistant, Raul Gautic, a very intelligent young man.

Raul went with me to see the Automobile Club group and he looked up the law. He drew up a bill of gift in Spanish and then dived right into the red tape. When I get home, all I have to do is send him the legal name of the Foreign Missions Board of that church and I will be through with the jeep.

SEES DUKE AGAIN

At the consul's office I accidentally ran into Duke Cassels-Smith, the young man who went with us part of the way down. He had spent several days fishing after he left us, but had poor luck. The weather was too warm for mountain trout. He was still a little under the weather from his illness.

We were really glad to see each other again. He goes home by the East Coast and I fly in a straight line to Miami. I already have my reservation and will be home before this letter could possibly reach Alabama. I invited my friend, Mr. Ramon Gutierrez, the former delegate from Chile to the United Nations, to have lunch with me today. He told me that the President of Chile had asked him to be the Chilean Foreign Minister, but that he didn't think he could do it because of the strain involved and of his age. I told him he ought to think of what President Eisenhower has done.

While I can never forgive Eisenhower for Little Rock, yet I do admire his being willing, with his bad heart and previous operation, to travel over a large part of the world building up tremendous good will for the United States. There is no question but that these tours he has made have been of untold value to us and the free world and certainly have badly discouraged the Communists in their plans to take us over.

SERVES GOOD PURPOSE

His trip has given the lie to all these false statements about Americans being unpopular. My own experience in foreign countries has convinced me that we are popular.

I am sick of all this talk about our relations with the colored race being resented in other countries. I happen to know that they understand our problem quite well and all to whom I have talked think the South is right in insisting on continuing the remarkable racial adjustment we have made over the last century.

HEARS OF ACTION

Today I just learned of the action of the State Democratic Committee in junking the infamous loyalty oath. It has permitted many good men, otherwise forbidden, to run for public office in our State. All we have to do now is to nominate and elect 11 presidential electors pledged to neither party.

If other Southern States will follow our lead we might be in a position to determine who will be the next President and I do believe that it will result in our being let alone by some of the South-hating politicians who are looking only toward the exaggerated political power of the Negroes and some doubtful Northern States.

Except for one written from Miami, this will wind up these inadequate descriptions of my trip to Patagonia.

TRAVELING DAYS OVER, MALONE BACK AT HOME

(By W. D. Malone)

MIAMI, FLA., February 25.—Well, I almost had to stay in Santiago after all. When I got to the airport and presented my passport it bore a notation that I had brought an automobile into Chile. The Customs official told me I could not leave Chile without carrying the automobile out.

This happened at 2 and the plane was due to leave in 15 minutes. I couldn't stay over any longer because the hotels had reserved all their rooms for those accompanying the President on his visit to Santiago on the first of the week. My hotel had notified me I would have to give up my room the next night. Furthermore, there was no flight to Miami for the next 2 days. One hundred and sixty newsmen and photographers had already registered at the Carrera Hotel. My guess was that at least 500 or 600 would come to Santiago during the President's visit.

A DESOLATE MAN

Well, they checked and okayed everybody else's passport but mine and I sat down on top of my suitcase, a desolate man. I brought up every known argument and reminded

them that Punta Arenas was a free port and I could sell the car there without paying any duties, etc.

The customs man was adamant. I looked at my watch and it was 2:15, the exact time for the plane to take off anyway. In fact, I saw it there. I asked the immigration officer, who appeared friendly, to please call the U.S. consul's office and ask for Mr. Raul Gautic or Mr. Algrant who would explain the situation and would be able to clear up the matter of the car shortly.

I also told him that the customs officials at Punta Arenas knew all about the car and had sent me to Santiago to complete the deal. He came back and said that the line was busy. I heard the motor start on that plane. Brother, I was really sick at heart. I asked him to call at least one more time so I could at least get cleared for next week, although I might have to sleep in the street.

HE MADE IT

I ran around the corner to the Lan-Chile desk and asked them to please not let the plane leave for 2 or 3 more minutes. Then the immigration officer came running back and waved to me that everything was OK. I grabbed my baggage as fast as I could and just managed to get on the plane before it took off. I thanked my lucky stars for that.

General impressions of South America:

Their inability to consistently have good government; the best people refuse to enter politics. Great undeveloped resources—little capital. Cruel inflation, falling mainly upon the workers and the savers (I tipped the waiter 250 Chilean dollars (pesos), which cost me 25 cents). Unhealthy concentration of population into cities. Few small cities or towns.

People courteous, though excitable. Quite a bit of northern and western European stock. Everyone extremely friendly and, on the whole, as honest as we are. Quite civilized; they know the good things of life but they are unable to acquire them since there is little manufacturing and a shortage of foreign currency to import things they need and want.

LOOK AT BRAZIL

Brazil: Larger than the United States, mostly undeveloped, mixed racial strains, Industrialization crippled by inflation.

Uruguay: Very progressive, the playground of South America. Highly Americanized. Cost of living very high with consequential suffering.

Argentina: The most stable, and agricultural base. Their money the best of any in South America—but also somewhat inflated.

Chile: A long narrow land shaped like a toothpick. Called the United States of South America. Very friendly to us. Present government curbing inflation as much as possible.

Foreign travel by the right people is gaining us many friends over the world. Eisenhower proved this, at great physical cost and with danger to his health.

Conclusion: How the free world does look to the United States for assistance, guidance and security.

I asked a highly educated Catholic priest, flying from Santiago to Lima, Peru, if he thought communism would conquer the world. He said that is impossible because of the strength and of the heart of the United States. We have a terrific responsibility. Awesome.

We must live up to it if we are to survive. This is indeed the golden age of America. To you who are uninterested in the future I would say, "Enjoy it while you may," but to those who are concerned over the welfare of their fellow men, their children and their grandchildren I say, "It is time to take stock." This Nation was built through the sweat and honest toil of Godfearing men and women. I have seen no foreign coin with the motto, "In God We Trust."

FABRIC BEING GNAWED

Yet our moral fabric is being gnawed around the edges by Godless people, pornographic literature, and demoralizing TV and radio programs. We southern people are the victims of some dissension created by the efforts of a few fanatics, with the blessings of Communists, and by some dishonest politicians who are trying to upset the finest adjustment between two totally different races that this world has ever known.

We are indeed strong and mighty, but unless we instill into the hearts and minds of our children the high ideals upon which our nation was founded, we will fall and great will be the fall thereof. Therefore, in this Golden Age let us remember Kipling's prayer:

"If drunk with sight of power we loose
Wild tongues that have not Thee in awe,
Such boastings as the Gentiles use
Or lesser breeds within the law,
Lord God of Hosts, be with us yet
Lest we forget! Lest we forget

"Far called our navies melt away.
On dune and headland sinks the fire
Lo, all our pomp of yesterday
Is one with Nineveh and Tyre
Judge of the nations, spare us yet!
Lest we forget! Lest we forget!"

My appreciation to anyone who may have taken the time to read these poorly worded, and hastily written, reports. If you liked them, drop me a card to Dothan, Ala.

As for me, I think my traveling days are over. I expect to sit on my front porch and read the newspaper for a long time hence. The best sight on my whole trip was the Dothan airport and my wife and family waving to me as I landed.

Minnesota Story

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1960

Mr. McCARTHY. Mr. President, the variety and vigor of life in the State of Minnesota is captured in the "Minnesota Story," by Angelo Cohn in the Voyager, March-April 1960.

The industrial, educational and scientific, cultural, and recreational resources of Minnesota are sketched in this article.

I ask unanimous consent that substantial excerpts from the "Minnesota Story" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINNESOTA STORY

(By Angelo Cohn)

Minnesota is where the sophisticated world meets the wilderness.

It is a State where some of nature's most violent forces are intermingled with man's most gentle works.

It is a State which was blessed with timber and iron—two resources that symbolize power—and has found latter-day wealth in electronics, the science of machines with delicate "nerves."

The extremes of Minnesota were demonstrated by an incident during the lifetime of Henri Verbrugghen, a dapper and worldly Belgian who was conductor of the Minneapolis Symphony Orchestra.

Verbrugghen used to relax in the State's northern lake region near Park Rapids, where his brother operated a fram and summer camp. Leroy Matson, an enthusiastic outdoorsman and later a justice of the Minnesota supreme court, was visiting the maestro there once. When the two men decided to go fishing, Verbrugghen placed his Stradivarius violin casually on the mantlepiece. Matson, one of the few persons who knew that a special air-conditioned hotel room and vault were rented in the city to store the precious instrument, protested to his friend.

"But the purpose of music is to enjoy it," replied the maestro. "If I have to worry all the time about that violin, there's no enjoyment. Let's go fishing."

That little known story is not important except as it reflects Minnesota's way of life, a life of fascinating contracts.

The Indians are another example. In one part of the State they still harvest and thrash wild rice by the age-old methods of their tribal ancestors. Yet some of these same Indians are eagerly sought to work in the booming electronics plants because they have developed skilled fingers through doing decorative beadwork.

In a sense, these contrasts also reflect the relatively brief history of modern Minnesota, which in 1957 marked its hundredth year as a State with a season of pageants and community celebrations.

The French came to Minnesota in the sixteen-hundreds, priests and fur traders together pushing large canoes upstream into the Indian country. They left names upon the land: Duluth, a city that is more than 1,000 miles from salt water yet has become one of the world's great seaports; St. Croix, a river whose glacially-formed valley is 100 miles of spectacular beauty; Mille Lacs, a lake of sinister Indian legendry and fabulous fishing in both summer and winter.

After the French and British had finished their scrapping over that territory, there was a quiet period in explorations. Then, in 1820, the American phase of Minnesota history may be said to have started. The significant event was establishment of a military post, later Fort Snelling, where the Minnesota River flows into the Mississippi. It was a fur traders' crossroads in northern reaches of the Louisiana Purchase.

From a corner of old Fort Snelling that is preserved as a historical shrine, you can walk a short way westward to the end of a 10,000-foot runway being built as part of the jet-age preparation of Wold-Chamberlain Airport that serves Minneapolis and St. Paul. Eastward, on the bluff across the Mississippi, the redskinned tribes used to pitch their tepees when they came in spring to trade with the white men. Today, a sprawling new building on the plateau houses the Univac division of Remington-Rand, a symbol of the State's newest major industry, electronics.

The two giants of Minnesota employment, Minneapolis-Honeywell Regulator Co. and Minnesota Mining & Manufacturing, are heavily involved in electronics also, as is General Mills, a versatile maker of breakfast foods. And not long ago, IBM opened a plant in Rochester.

Until the advent of IBM, Rochester was a one-industry town. But uniquely, its single industry was health, centered about the Mayo clinic and numerous surrounding hospitals. The clinic's reputation brings patients from around the world, and its influence has given a strong research quality to all Minnesota medicine.

It is no accident that in this experimental atmosphere a team of young surgeons at the University of Minnesota developed "open heart" operations to prolong the lives of stricken youngsters. Almost every day now some airplane brings a child from a faraway place, often from a foreign country, for the life-giving surgery.

The one-industry town also prevails in the northern part of Minnesota, on the Iron

Range. There, however, it is anything but a place for gentle hands. The iron ore is Nature's gift of power to Minnesota. In all the history of mining there has never been anything to equal the Mesabi Range as a source of iron ore, and historians give it major credit for victory in two World Wars.

There is another giant in northern Minnesota's power structure. He is Paul Bunyan, a legendary lumberjack of amazing size and accomplishments. Where he came from nobody knows, but Paul Bunyan stories are tall, tall tales and real American folklore.

One story, for instance, has it that the 10,000 lakes (accurate aerial maps have raised the number officially beyond 11,000) were formed by the footsteps of Babe, the Blue Ox that was Paul's pet. Then, there was the winter of the Blue Snow which wouldn't melt. Paul finally took his shovel and, with a single mighty heave, cleared the State by tossing the snow over his left shoulder. The snow landed atop the Rocky Mountains and gave those peaks their caps of perpetual glaciers.

Exaggerated, perhaps, but not lies, those yarns. If there's anything a true Minnesotan resents, it's the corruption of Paul Bunyan stories into ordinary, unimaginative lies.

Paul Bunyan is now well established in legend, and the nickname "Giants of the North" is still carried by Minnesota-born descendants of Scandinavian loggers or Bohemian and Slovakian miners whose muscles cut the pattern of the State's economic life only 80 years ago.

Muscle is still in high demand in the woods, the mines, and the farms, but more hands are required to do nimble fingerwork on small machine assemblies. One of the early secrets of Minneapolis-Honeywell, the State's biggest single employer, was the fact that it had managed to hire more skilled watchmakers than the industries of Switzerland.

Whether they were loggers or watchmakers, however, people who came to Minnesota arrived with strong purpose, ready to meet challenges as well as to seize opportunities. One challenge is the weather. The books tell us simply that Minnesota has a northern temperate climate with low average-mean temperatures. That's a pale, academic description of the dramatic changes that occur during a year in this part of the country.

* * * * *

Natives have learned to joke about it, but they have never allowed the extremes of temperature to interfere with extreme enjoyment of the good things available only under such conditions. They live close to nature in a thousand wonderful ways, yet surround themselves with the urbanities of the world.

Symphony concerts and hockey games go on in adjoining buildings on the same night. One house is filled with people listening to a world-famous visiting string quartet, while the place next door is the starting point of a sleighride around storied Lake Minnetonka on a crisp winter evening.

Summer has its contrasts, too. While 1,000 people sit in the grassy courtyard of Walker Art Center enjoying a concert, other thousands watch softball games around five or six lighted fields at the Parade, a sports park just across the street and within a short walk of downtown Minneapolis.

Lake Harriet, 1 of 11 lakes within the Minneapolis city boundaries, is the scene of outdoor operettas and other musical events. But a lot of the younger culture seekers hold fishpoles with baited hooks dangling in the water. The pursuit of culture and the pursuit of fish are ingrained in the life of the State.

Minnesota's cultural fountainhead is the State university, fourth largest in the Nation with 26,500 students. Its main campus is on the east bank of the Mississippi River just below St. Anthony Falls. Early day millers and lumbermen who lived on that side of the river when it was still the fashionable part of town established the university in territorial days, following the pattern of colleges in Yankee New England from which most of them had come.

* * * * *

The Metropolitan Opera regularly schedules a Minneapolis visit, and draws 20,000 in only four performances at massive Northrop auditorium on the university campus.

Even more impressive is the way the people of Minneapolis and St. Paul turn out 15,000 to 17,000 strong on a Sunday afternoon to hear an erudite discussion by T. S. Eliot or Walter Lippmann. The Minneapolis Star and Tribune sponsors these discussions as a memorial to Gideon Seymour, its late world-minded editor.

Duluth uses the scenic lure of the north shore to attract world-famed artists-in-residence each summer; Rochester keeps its doctors and their families busy relaxing in an art program of phenomenal proportions which was stimulated by William Saltzman, a young abstract painter who directs its art center.

Much of Minnesota's relaxation is tied to the weather, and seasons are more important than calendar dates. For many, January 1 is just another holiday. The new year really begins with spring. That's natural enough in an agricultural area, but fishing also has something to do with it.

Here's a State with slightly more than 3 million people and at least 2 million active fishermen. The statistics: 271,154 individual fishing licenses for residents; 390,879 combination licenses that cover man and wife plus children from 16 years to legal age; 301,868 nonresident licenses. Youngsters under 16 fish without licenses, as do the blind and recipients of old-age assistance.

A music critic once observed that you can tell when it's spring because the symphony audience has gone fishing. The hardier folk among the music lovers might skip the last concert or two for a whirl at early trout fishing in the fast-water streams which roar and tumble into Lake Superior. Often as not, these early-birds cast their flies while standing in snow, for winter lingers long in the shady evergreen woods that line the great cold lake.

In the weeks that follow, cabins in the lake country are opened anew. Freshly-painted boats are slid to water, outboard motors are tuned up, and tackle is cleaned. Minnesota is ready for the high season of its special way of life.

It is actually a multiphased activity, for canoeing, camping, water skiing, poker playing, outdoor cooking, and many a cottage sorority party are part of the fishing season.

Life on the lakes carries well into the autumn, which is also hunting season. Seldom does a duck hunter take to the wild rice marshes or flyway passes without putting a little fishing equipment into his car. Just in case there's "bluebird weather" and the ducks aren't flying, he can wet a line once more.

October is autumn's golden peak, and armies of hunters take to the field for pheasants or other game birds. Of a quarter-million hunting licenses isued annually, about two-thirds are for birds and small game. It's sport for women and girls as well as for men and boys.

The season ends with the business executive in the gray flannel suit turning into the man in the red flannel jacket, and he's not playing Santa Claus. Although the deer-hunting army has increased in recent years, so has the number of deer. Animals are thriving on marginal farms which have been abandoned in the north.

Even more exciting is the resurgence of the moose, a magnificent giant among North American animals, who seemed headed for extinction but has staged a comeback. It is far from a rarity for canoeists, hikers or hunters to sight one of these nowadays, and a thrill it is to see a moose swimming across a lake or crashing through the woods.

Nature has given Minnesota one other distinction—the State is the source of rivers flowing in three directions to three oceans: The Red River of the North to Hudson Bay and the Arctic, the border streams into Lake Superior and the Atlantic, and the mighty Mississippi, father of waters, flowing south to the Gulf of Mexico.

These rivers are a key to Minnesota's way of life, since they have made the area a refuge for fish and animals in abundance.

Upper stretches of these rivers, particularly tributaries of the Mississippi and St. Croix, also were the headwaters of the lumber industry in its heyday. Old timers still living today remember when the Mississippi above St. Anthony Falls at Minneapolis was lined solid with nothing but lumber mills for 5 miles.

In those days, a quarter million men—far more than the resident population—used to roar through town in early winter on their way to the logging camps and roar down again after the spring log drives to spend their season's earnings in wild roistering.

Lumbering made northern Minnesota one huge camp 80 years ago, and it is still that in many respects today. Only now it goes by the more pleasing name of "resort country." But even the most deluxe cabin resorts retain a camplike personality and appeal to the family trade rather than to glitter seekers.

Visitors, however, generally see the State's more sophisticated side first, because so many enter Minnesota at or near the Twin Cities.

To the unacquainted, however, it must be explained that "twin" refers only to a close physical proximity of Minneapolis and St. Paul. The togetherness usually associated with twins is otherwise replaced by intense rivalry in business activity, cultural affairs, sports, and social striving.

* * * * *

St. Paul boasts of its status as the State capital, but Minneapolis can always come back and point out that it is the location Minnehaha Falls. It is a near-dry cascade these days but enjoys the immortality of Longfellow's poetry, which made the falls a byword of the English-speaking World.

So the cities continue to argue, for they wouldn't be part of Minnesota if the contrasts were ever wiped out.

Censorship by Taxation

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an item prepared by the National Associated Businessmen, Inc., of Washington, D.C., which is a most timely discussion of a vital problem confronting the free enterprise systems in America:

CENSORSHIP BY TAXATION

"Absolute freedom of the press to discuss public questions is a foundation stone of American liberty"—Herbert Hoover.

FOREWORD

The regulation nobody wants

Business, labor, and Government agree on the viciousness of the present tax regulation which taxes business or job related expenditures—even institutional advertising—which the tax collector decides may tend to support or oppose Federal or State legislative proposals, local ordinances, or referendums. For tax purposes, it puts these expenditures in the same class as bribes—which are disallowed because contrary to public policy.

This tax penalty was not enacted by Congress—but was put into effect by internal revenue regulations. The hotly contested, amplied internal revenue regulations issued in December 1959 provide:

"(C) (1) Expenditures * * * for the promotion or defeat of legislation * * * or for carrying on propaganda (including advertising) * * * to influence the public with respect to the desirability or undesirability of proposed legislation is not deductible as a business expense, even though the legislation may directly affect the taxpayer's business."

These also provide, with respect to dues and other payments made to an association or union which is substantially engaged in the above activities, that—

"(2) Deduction will be allowed only for such portion of such dues and other payments as the taxpayer can clearly establish is attributable to activities other than those so specified."

This memorandum highlights the scope, development, and practical results of this regulation, and the need for speedy enactment of corrective legislation like H.R. 7123. It provides background material, for editorials, advertisements, speeches, letters to Congress, and so forth, without which censorship by punitive taxation will continue simply because of congressional inertia. Our friends in Congress must have this backing if legislation like that proposed by H.R. 7123 is considered and adopted at this session.

The Time Is Ripe

Bills to correct the situation are before both Houses of Congress. The initial such proposal, advanced by Congressman HALE BOGGS, Democrat, of Louisiana, a key member of the House Ways and Means Committee, is H.R. 7123. Companion bills have been introduced by Senator VANCE T. HARTKE, Democrat, of Indiana; Congressmen WILLIAM E. MILLER, Republican of New York; EDWIN B. DOOLEY, Republican, of New York; JOHN A. LAFORE, JR., Republican, of Pennsylvania; and OLIN E. TEAGUE, Democrat, of Texas. This legislation can be enacted in 1960—but only if the wide ground swell of citizen support is demonstrated to Congress.

Fairplay

Elementary rules of income tax justice should permit deduction of business expense—including advertising or dues paid by a taxpayer to his trade association or union. Yet this elementary justice is presently denied taxpayers on such expenditures made with respect to enactment or defeat of legislation, even though the legislation may vitally affect their businesses or jobs. A proposed city ordinance may, if enacted, put a taxpayer out of business, but his expense of advertising the situation and defeating the proposal by an aroused public opinion is disallowed by IRS even though this expenditure keeps him in business and on the tax rolls.

Fairplay demands that this unfortunate situation be corrected.

ABRIDGMENT OF THE RIGHTS OF FREE SPEECH AND PETITION

Basic to preservation of economic and political freedom is the full exercise of the right of free speech and the right of petition. That these fundamental rights are abridged by denial of normal tax treatment to those exercising these rights is recognized by the Supreme Court. As recently stated in *Speiser* v. *Randal* (357 U.S. 513):

"Denial of a tax exemption for engaging in certain speech necessarily will have the effect of coercing the claimants from the proscribed speech."

Extent of abridgment

Multiplied thousands of proposals involving broad economic, financial, and social issues are pending in Congress and in State and local legislative bodies. It is virtually impossible to comment publicly on any of these issues, through institutional advertising or otherwise, without the grave risk of the expense of this communication being disallowed by some Internal Revenue agent as being "propaganda (including advertising) * * * to influence the public with respect to the desirability or undesirability of proposed legislation * * *."

As was vigorously pointed out by their various spokesmen at the hearings on the new regulations, the very purposes of chambers of commerce, trade associations, professional societies, and labor unions often require them to press for or against legislative proposals important to their membership and to the public at large. Also, as they testified, it is to the public interest that their views and arguments be freely disseminated. Furthermore, they are exercising the constitutional right of free speech and the right to petition on behalf of their membership.

But exercise of these rights by an active organization, under the present censorship rule, is abridged by imposing a tax penalty on the organization's members—partial or entire loss of their normal deduction of dues and contributions. In fact, the regulations place the frequently impossible burden of proof on the taxpayer to prove that part of his donations and dues were not spent in connection with furthering or opposing legislative proposals, referendums, etc.

Good legislation, equally with good court decisions, requires the unabridged right of all parties concerned to present their case. In recognition of this, our tax laws properly permit deduction of expenses in presenting one's side in business or job related court proceedings. It is just as important that this rule also apply to legislative proceedings. Yet, expenses of an individual, a business, or contributions to a business or trade organization or union, are not deductible if for the promotion or defeat of legislation even though the legislation may directly affect the taxpayer's business.

The Secretary of the Treasury freely admitted in his letter dated February 26, 1960, to the tax-writing Ways and Means Committee of Congress, that:

"Existing law as developed has frozen concepts relating to expenditures in the area of legislative process which are quite distinct from generally accepted attitudes in regard to expenditures related to fields of administration and juicial processes."

Also that:

"The present rules have created problems of enforcement since it is difficult to 'police' advertising campaigns and expenditures by unions or trade associations in an effort to identify degrees of attempts to influence legislation. * * *"

Treasury clearly does not oppose and Commerce actually supports proposals like H.R. 7123.

Law by Regulation and Congressional Inaction

Over the years Internal Revenue has progressively sought to strike down business deductions under various theories. It has long been prone to so construe the deduction for "ordinary and necessary business expense" as to deny deductions for expenditures which it felt were contrary to public policy. In some circumstances these actions have been sustained, and public-policy deductions, including advertising, have grown. As stated in *Commissioner* v. *Heninger* (320 U.S. 249):

"Where a taxpayer has violated a Federal or State statute and incurred a fine or penalty he has not been permitted a tax deduction for it. Similarly one who has incurred expenses for certain types of lobbying and political pressure * * * has been denied a deduction. And a taxpayer who has made payments to an influential party precinct captain in order to obtain a State printing contract has not been allowed to deduct their amount from gross income."

The Court in the Heninger case, however, allowed deduction of an attorney fee paid by him in defending himself in a post office fraud order case, for violating certain statutes. The Court said that:

"To allow the deduction would not frustrate the policy of those statutes."

Again, in *Lilly* v. *Commissioner* (343 U.S. 90), deduction was allowed for kickbacks to doctors by an optical firm, overruling the Tax Court's ruling of nondeductibility on the grounds that "the contracts violated public policy."

The Court severely curtailed some types of public-policy action when it laid down the rule in this case that "the policies frustrated must be National or State policies evidenced by some governmental declaration of them."

But nevertheless the Supreme Court last year, in *Cammarano* v. *U.S.* (358 U.S. 498), held to be nondeductible expenditures for advertisements by a taxpayer presenting his views on a referendum which critically affected his business.

Here are reasons advanced by the Court:

"Since 1918 regulations promulgated by the Commissioner under the Internal Revenue Code have continuously provided that expenditures for the 'promotion or defeat of legislation * * * are not deductible.'

"Here the deductions sought are prohibited by regulations which themselves constitute a sharply defined policy."

The Court pointed out the failure of Congress over the years to change the provision "ordinary and necessary business expense" despite the interpretative lobbying regulations and stated that "under these circumstances we think that the regulations have acquired the force of law." This law by inactivity must be corrected by adoption of legislation such as H.R. 7123.

Is Advertising and Otherwise Presenting Views, Contrary to Public Policy?

The unfortunate public policy interpretation just described has been made despite the very opposite position Congress took in enacting the so-called Lobbying Act in 1946. That act in no way prohibits lobbying, applies only to organizations and persons who collect lobbying contributions or lobby for pay, excludes even these if they merely appear to testify, has a court construed limit to direct contact with Congressmen, and requires no move even of those covered than that they make reports of their lobbying purpose, collections and expenditures. In fact, the report made clear that even persons hired as direct lobbyists serve a useful and perfectly legitimate purpose. The purpose of the Lobbying Act was thus solely to create a disclosure obligation of certain persons and organizations engaged in attempting to influence direct lobbying, so the record would be clear as to the interests actually represented by them. Thus Congress specifically recognized that the public interest and basic principles of representative government are served by the presentation of views and so wrote simple fair play information requirements.

But in contrast, Internal Revenue, sustained by the courts, has built up a theory that these free speech activities are against public policy—and point to the fact that

Congress has not specifically acted on their administrative rules as evidence that Congress believes that presenting views to them or to the public on any legislative matter is wrong and should be penalized taxwise.

Public policy must be truly stated by the enactment of legislation like H.R. 7123.

Historical background of treatment of "lobbying"

Over a century ago, in an early case, the *Trist* case (21 Wall, 441), the Supreme Court decided that an equity court should not give an injunction to enforce an influence peddlers' contingent contract to get a private bill through the Congress. The reversal was on several grounds, one of which was that the agreement "* * * was for the sale of the influence and exertions of the lobby agent to bring about—the payment of a private claim by means which if not corrupt were illegitimate." The Court said: "To legalize the traffic of such services would open a door at which fraud and falsehood would not fail to enter."

In a similar situation over 50 years ago, the Court in the *Hazelton* case (202 U.S. 71) refused to uphold an equitable remedy sought by a lobbyist who had a contingent contract for lobbying through a private bill for purchasing a particular tract of land for a site for a hall of records. The opinion cited a statement in *Marshall* v. *B. & D.* (16 Howard 314) "that all contracts for a contingent compensation for obtaining legislation were void."

In 1941, when we were approaching the brink of a second war with Germany, the Supreme Court dealt with another contingent lobbying contract—involving lobbying for the restoration of property to former—and in 1941, prospective—enemy aliens. This was the *Textile Mills* case (314 U.S. 326). One question involved was the income-tax deduction of various lobbying expenditures made in fully getting the property back for the German interests in the 1920's.

The situation presented as to tactics employed in this lobby was such that the court, citing the Trist and Hazelton cases, stated that:

"Contracts to spread such insidious influences through legislative halls have long been condemned. Whether the precise arrangement here in question would violate the rule of these cases is not material * * * the general policy indicated by those cases need not be disregarded by the rulemaking authority in its segregation of non-deductible expenses. * * * The general policy being clear it is not for us to say that the line was too strictly drawn."

Thus, the saying, "Hard cases make bad laws," was exemplified by a broad ruling sustaining a regulation in which the court's decision went beyond the "general policy" in dealing with situations such as presented by the Trist, Hazelton, and Textile cases.

As has been stated, last year the Supreme Court, in the Cammarano and Strauss cases, ruled nondeductible the amounts taxpayers contributed to save their business by advertising their side on the issue presented by a State initiative referendum.

It could not say in that case, as it did in the alien property case, that "contract to spread * * * insidious influences * * * have long been condemned." This case was essentially merely advertisements stating the taxpayers views.

And the court was faced with the tax deductions it had upheld in the *Henninger* case (320 U.S.) for attorneys fees incurred by a mail-order dentist in successfully resisting a Post Office fraud order for 2 years, and the deduction of kickbacks paid doctors by eyeglass companies in the *Lilly* case (343 U.S.) in which the court stated that:

"Assuming * * * that under some circumstances business expenditures * * * may not be deductible * * * when they 'frustrate sharply defined national or State policies prescribing particular types of of conduct' * * * the policies frustrated must be national or State policies evidenced by some governmental declaration of them."

National policy must be clearly expressed by enactment of legislation such as H.R. 7123.

Need for corrective legislation

After the blanket validation of the IRS "lobbying rule" regulations as a "rule of law" by the Textile Mills and Cammarano decisions of the Supreme Court, IRS was hardly in a position to modify its basic rule on "lobbying" in the absence of congressional legislative action—despite the "public policy" statements respecting lobbying in the reports on the 1946 Lobbying Act and the definition of lobbying in the interpretation of that act by the Supreme Court in the Harris case.

The Boggs bill

H.R. 7123 was introduced by Representative Boggs on May 15, 1959 to amend the business expense section (162) of the Internal Revenue Code, which permits tax deductions for "Ordinary and Necessary" business expenses, by adding this short paragraph:

"Expenses lawfully incurred in supporting or opposing or otherwise influencing legislation in the Congress or in a State legislature or other local government agencies or in submission of proposed legislation to the voters, shall be allowed as proper deductions from gross income."

"Carried to its ultimate conclusion, a purchaser of advertising in a newspaper or magazine, a local chamber of commerce, a trade association, national, State, or local education and civic or voters groups all may be denied the right of professional and political activity or expression of views which is and must remain the sinews of our democratic way of life." as Congressman Boggs so ably puts it.

The Washburn case

This very situation is dramatically brought to mind by the plight of the editor of a small daily newspaper in Hope, Ark.

Alex H. Washburn used his newspaper in an attempt to prevent a sales tax from driving business from his hometown, Hope, Ark. He spent $6,024.96 in defending his newspaper business from the tax. This $6,024.96 has been disallowed in toto by the Internal Revenue Service of the Treasury Department. Any newspaper could be next.

The remedy is enactment of legislation such as the Boggs bill, H.R. 7123.

Tax Penalty and Loyalty Oaths

It is unfortunate that the Supreme Court in the Cammarano case did not follow the freedom of speech reasoning it employed in striking down a loyalty oath requirement imposed by California as a condition to a tax exemption. In this 1958 decision, *Speiser* v. *Randall* (357 U.S. 52), the Court said:

"The vice of the present procedure is that, where particular speech falls close to the line separating the lawful and the unlawful, the possibility of mistaken factfinding—inherent in all litigation—will create the danger that the legitimate utterance will be penalized. * * * To deny an exemption to claimants who engage in certain forms of speech is in effect to penalize them for such speech."

The Court in the Cammarano tax case, involving a businessman fighting for his business, was hard pressed to distinguish his situation from the Speiser situation.

Justice Douglas stated in the Cammarano case that "I find it hard to say that those who were fighting for their lives in opposing the initiative measures were not exercising first amendment rights. If Congress had gone so far as to deny all deductions for 'ordinary and necessary business expenses' if a taxpayer spent money to promote or oppose initiative measures, then it would be placing a penalty on the exercise of first amendment rights. That was what the State did in substance in *Speiser* v. *Randall* * * *."

First amendment rights must be safeguarded by legislation like H.R. 7123.

WHAT EDITORS SAY ABOUT "CENSORSHIP BY TAXATION"

Editor & Publisher:

"In all of the discussion on the Internal Revenue Service rulings which result in curbing business expenditures for opinion advertising, nothing has hit home with such impact as the Tax Court's decision against A. H. Washburn of the Hope (Ark.) Star.

"Mr. Washburn crusaded to obtain a vote by the people on a question of a State sales tax—only to find that he must write off the expense (about $6,000) as a bread-and-butter item. He can't charge it up to 'ordinary business expenses' and claim it as a deduction in figuring his income tax.

"The entire question of tax allowance for 'lobbying' expenses, including advertising costs, is on the agenda of the House Ways and Means Committee, which has already held hearings. The American Newspaper Publishers Association argued that nondeductibility amounted to censorship of ideas.

"Our advices from Washington this week were that a floodtide of grassroots pressure will be needed to get any of the corrective bills—six in the House and one in the Senate—out onto the floor before adjournment of this session. Representative HALE BOGGS, Louisiana Democrat, has made a strong plea for his bill on the ground that Congressmen rely on opinion (lobby) advertising for indications of back-home sentiment."

New Orleans States-Item:

"Timely and fair is a bill by Representative HALE BOGGS asking for classification as legitimate expenses those sums spent by industry to speak in mind on Federal legislation.

"He is on sound ground when he says that any business which feels a particular measure is deleterious to its interest must be allowed to say so without being penalized income tax wise.

"If the cost of being heard in the interest of self-preservation isn't a necessary business expense, then what is?"

Wall Street Journal:

"If you look at Representative HALE BOGGS' bill one way, we suppose it could be called a proposal to help Washington lobbyists. Why, one might be inclined to ask, should the law be changed to permit an individual who wants Uncle Sam to ease up on his taxes, or pass a measure that will help his business, to deduct the costs of his attempts to influence legislation from his income?

"The argument sounds reasonable enough. But if you'll take the trouble to look at the other side of the proposal of the Louisiana Congressman, his bill takes on a far different appearance.

"The problem lies, first of all, in the inequities of the tax laws that result in a privilege to some and a penalty to others. In this case, the constitutional right of petition granted all the people is affected.

"Here's how it works: A great many tax-exempt organizations and a lot of pressure groups are permitted—and rightly so—to engage in lobbying efforts to influence legislation without losing their tax-exempt status. And Government agencies, which of course pay no taxes, are among the biggest lobbyists in the Nation's Capital.

"But, says Representative BOGGS, present Internal Revenue Service regulations prevent like deductions by individual people. 'Even the expenses of a businessman's appearance at a public hearing before a congressional committee considering legislation affecting his business may be disallowed.'

"Mr. Boggs' petition for fair play is based on the pretty sound idea that the right of any and all citizens to petition for good laws, or to oppose bad laws, as they see those laws, should not be diluted by punitive taxation.

"Hence his bill to allow expenses legally incurred in attempts to influence legislation to be as tax deductible as expenses of foundations, tax-exempt lobbies, and Government agencies.

"And when you get right down to it, the way the regulation works now it means that if a bill is before Congress and John Smith wants to have his say in opposition to some pretty powerful tax-exempt interests, John Smith has to pay taxes on what he says."

Washington Evening Star:

"In effect, even if not so intended, these limitations amount to censorship by punitive taxation. By the exercise of the taxing power, they inhibit—even if they do not prohibit—a free expression of views on matters of public policy and interest. In urging nonpartisan support of his amendment, Mr. Boggs points out that this free expression of views—'the right of the people to petition the Congress' for example—is as old as the Constitution itself. Congress cannot legislate effectively if insulated from public opinion. And as Mr. Boggs says further, 'If we dilute by punitive taxation the right of our citizens to petition for good laws, we deny them the right of self-protection from damaging and destructive legislative action.'

"The Boggs proposal would lay down 'precise and definite guidelines,' which the Treasury Department and the IRS apparently feel are now lacking, for junking this offensive regulation. The agencies are raising no objection and acknowledge that little loss of revenue would result. Congress should not neglect its responsibility for seeing that correction is made."

Fairview (Iowa) Ledger:

"If somebody wants to spend the country into bankruptcy, if somebody proposes to tax a business out of existence, if somebody proposes to outlaw a labor union, the parties against whom legislation is proposed are now told they can't publish their grievances and permit the Government to pick up a part of the tab by way of deductions on tax returns.

"The proponents of big Government will not be alarmed about this. For those who may be alarmed there is something they can do. They can write a letter to their Congressman asking him to support a couple of bills which will restore their right of petition without a tax penalty."

Sioux Falls Argus-Leader:

"It has always been a part of the American way to let each side have its say. To interfere with that expression of opinion by increased taxation is not in keeping with our ideals. Why intefere with a business, a labor union, or anyone else who wants to protect his own interest by lobbying or advertising?

"Legislators cannot operate in a vacuum. To say that they should be insulated from the ideas of business, labor, or anyone else undercuts the American way."

Representative Carl T. Durham

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, April 28, 1960

Mr. ERWIN. Mr. President, on March 19, 1960, the North Carolina Democratic Club of Washington, D.C., honored two of North Carolina's ablest sons, GRAHAM A. BARDEN and CARL T. DURHAM, who are retiring from the House of Representatives after most devoted and distinguished service to their districts, State, and Nation. On that occasion, Dr. E. McG. Hedgpeth, of the School of Medicine of the University of North Carolina, paid well-merited tribute to CARL T. DURHAM. I ask unanimous consent that a copy of Dr. Hedgpeth's remarks be printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

Mr. President, distinguished members of the North Carolina delegation, ladies and gentlemen, when I was extended the invitation to be present here tonight, to say that I did not feel considerable reluctance would be to use the truth as loosely as it is routinely used in some parts of the world today, for I certainly felt inadequate to do justice to this assignment. I was assured that the only prerequisite was that the person to do this should be a close personal friend of our distinguished Congressman from the Sixth District. I could meet this criterion; and although most appreciative of the honor, I still feel a genuine inadequacy to do justice to this occasion.

My associations with CARL DURHAM first began in the early 1920's, when I was a freshman at the University of North Carolina and he was a young pharmacist in Eubank's Drug Store in Chapel Hill. Since then I have had the privilege of associating with him in a number of capacities: as my friend and counselor; through the professional relationships of physician and pharmacist; and probably the most satisfying of all, as members of a very select organization known as the Riverside Hunting Club, where we have spent many hours together and found many mutual ties and interests. I have shared with him the excitement of listening to the melodious voices of his famous red-bone hounds as they expressed their enthusiasm along the banks of the Haw River trying to put the ring-tailed coon up a tree; we have felt our pulse quicken and our blood pressure rise as we listened together to the call of the greatest of all North American game birds, the wild turkey; we have experienced the thrill of seeing a fine setter flash to a point when his nose told him by that invisible thread of a scent that a covey of the sporting bobwhite quail lay just ahead; and we have laughed together at the staccato voices of a pack of little beagle hounds in hot pursuit of Chatham County cottontails. I have spent many pleasant and profitable hours sitting before an open fire listening to him discuss world affairs.

In all these associations, I have never known CARL DURHAM to show anything other than those fine basic traits of character, understanding, and leadership which have marked the great men of our times.

The Durhams of our area are known for their native intelligence, their determination, and their leadership. CARL has exemplified those qualities in such a fine manner that the people of his district and community feel some personal share in his attainments.

It would, of course, be unbecoming of me to attempt to review here CARL DURHAM'S accomplishments in this greatest of all legislative bodies in the world today, for you are in a much better position to judge these than I am. However, I believe that Daniel Webster's remark about his political opponent and friend, John C. Calhoun, would also apply to CARL DURHAM. If my memory is correct, Mr. Webster said during the famous debates on the Compromise of 1950:

"There was nothing groveling, or low, or meanly selfish that came near the head or heart of Mr. Calhoun."

This, I am sure, is equally true of CARL DURHAM.

We of the Sixth District, as manifested in every Democratic primary and elections since 1938, believe in CARL DURHAM and have the greatest respect and admiration for him. He has served us, the State of North Carolina, and the United States of America in the finest of traditions.

And so, CARL, I bring to you from your many friends of the Sixth District our sincere appreciation and affectionate esteem, with genuine regret that you have decided to withdraw from these responsibilities but, at the same time, with the happy realization that you are coming back home, where we will have the privilege and opportunity of enjoying and profiting by your companionship on a day-to-day basis. May God bless you and keep you.

Big Five Indictment Points Up Antitrust Need

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. EVINS. Mr. Speaker, on March 10, 1960, I had inserted in the CONGRESSIONAL RECORD a news release of the Department of Justice concerning the indictments of electric manufacturers charging conspiracy of price fixing, rigged bidding and contract allocations. In that insertion I referred to the rising cost of Federal power projects and the possible effect on the national budget and the American taxpayer of such price rigging and competition-destroying tactics described in these indictments.

There is another and perhaps deeper danger inherent in these alleged conspiracies. They point out a great need for effective and dynamic antitrust action against the ever-increasing monopolistic tendencies of certain business interests.

In this regard I have noted a recent article in the Cincinnati Inquirer by Mr. Ed Wimmer, vice president of the National Federation of Independent Business entitled "Big Five Indictment Points Up Antitrust Need: End Era of 'Join or Else.'"

I ask unanimous consent that Mr. Wimmer's article be reproduced in the RECORD. The article follows:

BIG FIVE INDICTMENT POINTS UP ANTITRUST NEED: END ERA OF "JOIN OR ELSE"

The Justice Department took another major step in its fast moving antitrust crusade, when it charged General Electric, Westinghouse, Allis-Chalmers, I-T-E Circuit Breaker Co., and Federal Pacific Electric Co. with "allocating business among themselves; fixing prices, alloting territories, and a refusal to sell certain equipment to other electric manufacturers."

There were other charges by the Department, and denials of guilt were immediately issued by GE and Westinghouse, with Allis-Chalmers stating verbally that the company had ordered its employees to—"tell the truth to the investigators regardless of the

consequences." Said Allis-Chalmers president, R. A. Stevenson:

"* * * pricing must be determined by sound informed judgment, and customers must be earned by quality products and aggressive salesmanship. Any easier cartel-type methods lead only to stagnation, Government regulation, or both * * *. We will dedicate ourselves to the end that the present situation will never rise again."

Although 14 companies in all have been handed complaints, the above 5 mentioned were accused specifically of meeting in luxurious hotel rooms in Atlantic City in 1958 to allocate bids for switch-gear sets to Federal, State, and local governments among themselves.

According to the charges, GE was to get 39 percent of the business. Westinghouse 35 percent. I-T-E 11 percent. A-C and Federal Pacific 7 percent. Allegedly, agreements on high voltage circuit breakers were also reached, and Federal Pacific and I-T-E were allowed to quote below list prices to private industry.

Both Federal Pacific and I-T-E Circuit Breaker Co. are the smallest among the "big five" in the electrical distribution equipment business, but each is the result of several mergers that speeded up the cartel pattern which has marked this and so many other industries. There has been a feeling for a long time, among smaller concerns in the electrical equipment industry, that the whole case boils down to one of joining up with someone bigger or getting out, and this was particularly true when it came to dealing with the Federal Government. You were either big or you had to get big, or give up; a case of "when you can't lick 'em join 'em," as the cops said in Chicago during the days of Al Capone.

We have no idea what the Federal Grand Jury will do in Philadelphia, and we are making no premature statements about the guilt or innocence of the defendants. What caught our eye in this matter was the statement of Mr. Stevenson of Allis-Chalmers, concerned with cartels and methods of selling, which is all that any honorable, progressive, independent business in this country is asking for. We have sought laws for no other purpose than that of assuring any business an atmosphere of fair competition in which to make its race, and we have been insistent that the smalls, as well as the bigs, shall follow methods based on something that at least resembles a live and let live formula.

Antitrust laws, when properly administered, act the same as the electric distributor involved in the case against the big five. This piece of equipment holds back excess electrical energy; regulating the flow and allowing just the right amount to be fed into power equipment: a home light bulb, an atomic energy plant, or any other electrical installation.

If the distributor assembly should fail, the electrical energy flowing through the power lines would pour into plants and homes in chaotic amounts, and this same hold-back regulating principle can be likened to our antitrust laws. Without them, chaos would have resulted in the market place, and often as the Government may be wrong in its many approaches to the monopoly problem, too many attempts cannot be made to end for all time this business of "join 'em or go broke." * * * whether it is electric distribution equipment, pullman cars, credit cards, trading stamps, labor unions, panties, or pocketbook makers.

Bill of Rights for Children

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. BOWLES. Mr. Speaker, a few days ago I received the following letter from the sixth grade teacher of the Roger Sherman School, New Haven, Conn.:

DEAR MR. BOWLES: The youngsters in my sixth-grade class have just completed writing a bill of rights for children the world over. This is the culmination of almost a year's work.

In addition to their required work, they read more than 200 articles, several U.N. publications, and more than 50 reference books by way of background preparation. They also tune in on the news every day.

At some points their bill of rights parallels the universal declaration, but by and large it supplements it with an intimacy and warmth that only children can so candidly express.

When I asked the children what they considered the most important message they wished to get across, one youngster replied simply and profoundly, "We care."

In all humility, and with complete faith that in a democracy even the smallest voice will be heard, they would like you, if at all possible, to present to Congress their bill of rights.

These youngsters have a sense of historic destiny and a social conscience that I hope will warm the hearts of our lawmakers, as mine has been warmed, whether or not they believe in all of these proposals.

Appreciatively,

ANA R. MASKEL.

Mr. Speaker, accompanying their teacher's letter was a document from these Connecticut sixth graders which has touched me as deeply as anything I have received from my home State since coming to Washington. These children have said what they want to say in an imperishable way. Tony Lin begins by explaining how the bill of rights was formulated, and the document itself follows. I am honored to present it to the Congress and the American people:

OUR BILL OF RIGHTS FOR CHILDREN

Since the beginning of the year, we have been studying the food, income, land, health and educational problems of the world. We have studied the U.N. in action, and its attempts to solve these problems. We also discussed war, prejudices, and unequal rights. We have found that two out of three children are hungry and unhealthy. Half of the world's people are illiterate.

We have read over 200 articles from newspapers, periodicals, pamphlets, and U.N. publications on the world situation. We have listened to countless news reports over the radio and television. We have also read over 50 books.

We decided to divide our bill of rights into three sections: love, health, and education.

Miss Maskel, our teacher, asked each child to write his views on each topic. These compositions were not used but just to get us started thinking. Through discussion we would get at a problem from all sides. We would arrive at an answer and Miss Maskel would write it down on the blackboard. If we didn't attack it from all sides, Miss Maskel would ask us questions to get us to think again. If anyone thought of a better way of saying something, and if the class approved of it, Miss Maskel erased the old statement, and put in the improved one.

We have written this bill of rights not for ourselves, for we have most of the necessities of life, but so that the other children of the world might benefit from it.

TONY LIN,
Roger Sherman School.

A BILL OF RIGHTS FOR CHILDREN THE WORLD OVER

We, the children of grade 6, room 10, Roger Sherman School, New Haven, Conn., would like to present our own recommendations for a bill of rights for all children.

I. Every child needs love. Without love, children would suffer despair. Their health would also suffer. Love gives children a feeling of wanting to do things better.

1. Therefore, every child should be loved regardless of creed, color, sex, nationality, or occupation of parents.

2. Every responsible adult should be concerned about all children. Every child should have some adult with whom he may discuss his problems.

3. Children who are orphaned should be protected and cared for by adults who would treat them kindly.

4. Adults should treat children fairly if they want children to respect them.

5. Some parents like one child better than the others. If so, they should treat all the other children in the family the same.

6. If parents show love for their children, children should return this love with gratitude. Children should help in every possible way voluntarily and when asked.

7. Teachers must respect children, understand them and let the children know that they are loved.

Children should respect their teachers. They should feel that teachers are their friends. Children should cooperate so that there will be a happy, atmosphere in the classroom. Children and teachers will be able to work together better.

8. Every child should be given something to love and care for so that he can assume responsibility.

9. Every child should have the joy of planting and watching live things grow.

II. Every child is entitled to the kinds of living conditions that will produce good health.

Six hundred million of the world's 900 million children are unhealthy because of lack of proper food, clothing, shelter and medical help.

Asia with more than one half of the world's population has less than one fifth of the world's food.

Western Europe, North America and the U.S.S.R. compose one-third of the world's population, but they consume three-fourths of the world's food.

The "have" nations should share more generously their blessings with the "have not" nations.

In the world today there is not enough of tillable land to feed, clothe, and shelter all the people in the world.

The U.S. Department of Agriculture says that each person requires 2½ acres of good land to provide for his physical needs. Today there are only 1⅗ acres of tillable land for each person, but this land is not evenly distributed. Almost 1½ billion acres of new land could be brought into use.

Scientists should explore the vegetation and fish of the seas to increase food supplies.

In another 25 years the world's population will be almost doubled. Animals for food will be more scarce. We will have to turn to the sea for most of our food.

1. Every child should have enough to eat.

2. He should have proper clothing according to the climate and weather.

3. Everyone should have adequate shelter. Slums should be redeveloped into properly equipped houses with play areas on green grass.

4. Medicine should be distributed by governments where needed. If governments cannot afford to do this, the United Nations should do so.

People who can afford to pay for themselves should do so.

5. Countries who have an excess of doctors should let volunteers go to countries in need of doctors. These doctors should receive an extra degree from the U.N.

Education for doctors and nurses should be free in every country so that there will be enough doctors.

There are 900,000 doctors in the world, but we need twice as many.

We need more nurses and trained helpers.

6. Children and adults should be taught to practice cleanliness.

7. Children and adults should be taught how to control pollution of water.

8. They should be taught that various insects carry various diseases, and learn how to protect themselves by spraying with proper insecticides.

The "have" governments should give insecticides to the "have not" people, because they do not have the factories and the materials to produce these chemicals.

The United Nations should send experts who know how to speak the local language out into the villages to instruct the people in the use of these medicines.

9. There should be hospital facilities for all people who need them. Some of these could be traveling hospitals.

III. More than one-half of the world's population of 2½ billion don't know how to read or write.

If all people knew how to read and write, they would be more prosperous. They could read and write directions.

With proper tools they would be able to work better and make more products.

They would learn how to practice good health habits.

They would know about other people. Perhaps people would understand each other better.

Other countries could not take advantage of them. They would know how to defend themselves.

They would get more enjoyment out of life by knowing how to read and write.

People need an education to run their own government well.

We are living in an atomic age. People need to know much more about science.

As the population of the world multiplies it will be much harder to earn a living. We will have to discover new ways of saving and using our natural resources. For this we will need people who have an education and scientific imagination.

To survive, people will have to study how to get along with others. People will have to learn about the well-being of others.

That is why we are concerned with children the world over, not just ourselves.

1. Therefore every child should be taught how to read and write.

2. No child should be denied the chance to receive an education.

3. Every child should be given the chance to develop all of his abilities.

4. Every child should be taught about the world and its peoples, and their problems.

5. Every child should be taught how to work with his hands as well as his mind.

6. Every child should be taught not only facts, but also how to think for himself and express his opinion.

7. Every child should have the right to play for physical development and for pure pleasure.

8. Children should not be overworked to help support a family.

9. No one should be permitted to take advantage of children.

10. No one should interfere with the child's time for learning.

11. Each country should provide many kinds of education according to its ways of life. Their standards of education should be developed according to the progress of the world.

12. Every child should have the opportunity of a free education through college, if he qualifies.

13. All people should be permitted to worship as they please without interference.

In school every child should be taught to respect each other's beliefs.

14. All people should be taught about other religious beliefs in the world so that people may understand different ways of thinking, different customs, and many kinds of wisdom.

15. Everyone should have equal rights because no one race is superior to any other.

Everyone should have equal rights to a full education, according to his abilities. With proper education harmful prejudices could be abolished.

16. No child should be permitted to call any other child insulting names. Ridicule should not be permitted in any classroom. This should be a standard of citizenship for adults, too.

CONCLUSION

In our classroom we are a class family. Three religions and three races are represented. All the children work together, play together and visit each other's homes. We help each other.

This is the way we would like life to be. In our classroom this is our daily life. We wish that the outside world would enjoy our freedom.

You, the adults of the world and heads of governments, are responsible for our safety, our lives. Children never started wars. Adults did, but children suffer the most from them.

If our Declaration is to reach all the children of the world there must be global peace.

De Gaulle Refreshingly Frank

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. MICHEL. Mr. Speaker, I ask unanimous consent that the following editorial entitled "De Gaulle—Refreshingly Frank" appearing in the morning edition of the Peoria Journal Star of Tuesday, April 26, be printed in the Appendix of the RECORD.

DE GAULLE REFRESHINGLY FRANK

Isn't it refreshing to hear a great national leader who isn't worrying about elections and political pressures speak up? General De Gaulle has made some of the plainest, frankest, and most useful comments of any world political figure in a long time.

It is most unusual in this age of tippy-toe diplomacy, and great consideration for the feelings of others, for a world leader to make a speech outlining his views just before going into conference with President Eisenhower.

Usually one goes in mum, and comes out with some sort of a carefully worked over joint statement which reveals nothing about the basic feelings and position of the visitor.

Not so De Gaulle. He made an excellent talk, standing on his own two feet, which should serve to make it very clear to the Soviet Government and to the world that he is not following any U.S. policy. Instead, his own strong point of view is that if Russia makes a fuss over Berlin again, the summit meeting is a waste of time.

In short, that no bluffing will be acceptable to De Gaulle, and if Russia tries to put on the pressure again they can go to the devil.

This is a strong position. It shows more assurance and strength of will than we are used to seeing in our cold war maneuvers. And yet it is backed by strong statements, and realistic ones, that the only road for us to follow is toward real disarmament—and an easing of tensions must come first.

This puts it squarely up to Khrushchev to ease tensions and not invent new crises.

Such action may serve well to smooth the road of the months ahead, and discourage the bubbling Soviet Premier from any pre-summit adventures.

We would wish our own Government were as forthright. We would certainly wish that the British Government would take a leaf from De Gaulle's book and show some small sign of boldness.

And we can be encouraged that De Gaulle-Eisenhower plans for the summit seem to be going smoothly—because we know what De Gaulle's attitude is, and presume Ike must see things much the same way.

Jobs for the Handicapped—Passports to Dignity

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to include an essay written by Ann Harycki, a student of the Maria High School, Stevens Point, Wis., on the subject of "Jobs for the Handicapped—Passports to Dignity." Miss Harycki was a winner in the Statewide 1960 contest sponsored by the Governor's Committee on the Employment of the Physically Handicapped, and I am sure the House of Representatives will join me in congratulating this student on her excellent essay, which is as follows:

JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY

(By Ann Harycki, Maria High School, Stevens Point, Wis.)

"Food, clothing, and shelter, the necessaries of life, the things by means of which man has expressed his unity with the universe and his creativeness, his love of his fellow men and his love of God, his delight in the physical world and his ability to collaborate wtih God in creation. The object of work is wholeness."—Eric Gill.

A glimpse into history reveals a panorama of man expressing himself at work from the beginning of his existence. The caveman carving the first crude wheel, the Biblical

shepherd tending his flocks, or the first scientist probing the mysteries of the physical world was laboring in the dignity of his wholeness as a rational and spiritual being. He perceived his unique worth as a human person; as caretaker of the earth he mastered situations and met the needs of those who depended upon him.

Two hundred years ago our democracy was founded on the truth that "all men are endowed by their Creator with certain inalienable rights—life, liberty, the pursuit of happiness." These rights are summarized in the right of every man to what Eric Gill calls the means to living, the right to work.

The secret of a man's dignity lies in this right because at his work he functions as a whole person. He uses all the powers of a human being to express his wholeness—the power of his mind to think, the power of his will to make decisions, the power of his body to serve his fellow men, and to collaborate with God in creating. Work makes him a whole man; no physical lack can diminish the inherent dignity of his wholeness.

Yet we would rob some men of their God-given right. We would stifle their thinking ability, forbid them to serve others, and sterilize their creativeness. In short, we would strip them of their dignity, their right to live, to work, as whole persons, and abandon them—destitute foreigners in their own hometowns—all because of a mistaken idea that a physical deficiency makes a man less a man. Who can tell how many lives have thus wasted away? How many times has an employer's embarrassed "No" denied some person the means to living?

Actually, the handicapped man is as totally a person as his brawny neighbor. Only when he is denied the expression of his personality in a worthwhile job does he become truly handicapped. Only then does he begin to doubt his true worth, his dignity. Only then does he become alienated from a world of whole persons, and then a job is the only passport that will allow him to walk through that world unhampered—not as a stranger, but in all the dignity of a whole person.

The so-called handicapped persons I have met and come to know have proved this to me. Each person's enjoyment of his inalienable rights hinges upon the degree to which he is granted a genuine passport to work for the necessaries of life.

Even as a little girl I never considered my grandfather handicapped, or anything less than a whole person. Over the years his passport has dimmed the memory of the second arm he possessed in his youth. For 24 seasons on his farm "Granpa" has collaborated with his Maker and has delighted in the earth's annual drama of producing food. Now retired and living in town he has taken his official passport along. At 66 he is literally building a house singlehanded, a notable task he has successfully undertaken three times in the past.

From my grandfather's untiring dedication to his work has sprung the undeniable dignity of his manhood. I visualize him running his strong fingers through a bin of fragrant new oats or over a freshly planed surface of lumber and I am aware of the stature of a man in all his worth—a man creating, a man imprinting on nature the stamp of human personality. I see a man secure and proud in his ability to provide for his family and handle major problems, a man who can serve his neighbor because he has the means to do so.

Jobs for those we label handicapped do not always meet such an ideal, but they can still serve as passports. The cripple at an office job exercising his ability to reason and reach decisions is asserting his nobility as a person, a rational being. His passport opens vistas of the mind where only the human can travel, and where the human travels in all his dignity.

Even the handicapped person offered the slightest bit of work by which he can serve others receives the magic formula which allows him to respect himself because he can give himself. Only a whole man can give of his wholeness to others; this is the source of dignity which raises his outlook to a new perspective.

The handicapped truly need jobs. Realizing this need, they want jobs. The employer who unjustly deprives any person of the opportunity for occupation is actually depriving him of the means to living as every free person deserves to live. And in a democracy the employer who deprives anyone of the means to living is suspending a free person's inalienable right to life, liberty, and the pursuit of happiness. Thus he is contradicting the very principle that democracy was founded upon. He is weakening its foundation.

This we cannot tolerate. For our America was, and is, "dedicated to the proposition that all men are created equal." We believe that all men were created whole persons, born to think, to will, to serve, to love. Therefore we must grant to every person, regardless of his physical disabilities or limitations, the opportunity for him to express his personality in a worthwhile job. Using to the fullest capacity all his powers of mind, body, and soul, every man can then realize the true source of his human dignity.

And to those we have so blindly and unwisely alienated we must grant passports, the means to living. Then will America's strength be embedded in her people, people who are truly and wholly persons, because they work in the full glory of their God-given dignity.

Amendments to Small Business Investment Act of 1958

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. EVINS. Mr. Speaker, earlier this year, a subcommittee of the Committee on Banking and Currency, under the chairmanship of the Honorable WRIGHT PATMAN, held hearings on proposed amendments to the Small Business Investment Act of 1958 with particular reference to S. 2611 and various House bills, including H.R. 8096 which I introduced on this subject. The experience achieved under the act indicates that certain amendments are necessary in order that the program may be properly effectuated. During these hearings extensive testimony was given by Senator JOHN SPARKMAN, the very able chairman of the Senate Small Business Committee; and as chairman of Subcommittee No. 1 of the House Small Business Committee I also presented a statement.

Because of the importance of this program I include, under leave granted, Senator SPARKMAN'S and my own statement in the Appendix of the RECORD. The statements follow:

TESTIMONY OF SENATOR JOHN SPARKMAN, DEMOCRAT, OF ALABAMA, CHAIRMAN, SENATE SMALL BUSINESS COMMITTEE BEFORE SUBCOMMITTEE NO. 3, HOUSE BANKING AND CURRENCY COMMITTEE ON S. 2611

Mr. Chairman and members of this subcommittee, thank you for your kind invitation to appear before you today to discuss amendments to the Small Business Investment Act of 1958. It is always a pleasure to take part in the continuing cooperative efforts involving the Banking and Currency Committees and the Small Business Committees of the House of Representatives and the Senate.

Mr. Chairman, you and I have long been ardent advocates of the capital bank or investment company concept and I am hopeful that the hearings held 2 weeks ago by our Small Business Committee and these hearings this week by your subcommittee will inject a new burst of enthusiasm and activity in the 18-month old small business investment company program.

The honeymoon is over on this program, and has been for about 6 months. Bitter and disillusioned attacks on the administration of the act have emanated from leading financial writers since that time, replacing an era of hopeful good feeling which occurred during most of the year following the enactment of the legislation in August, 1958. The program has been called an appalling flop, strangling in redtape.

About 6 months ago, the Senate Small Business Committee decided to conduct a field study of the program to check on this criticism. In addition to discussions with the Administrator and his aids, our counsel have traveled over most of the country discussing the act and its administration with the small business investment companies licensed under the act, prospective organizers of the SBIC's and with the regional personnel of the Small Business Administration, and particularly with its investment division officers in each region.

During our hearings last month, a broad cross section of the small business investment companies and the proponents testified, together with the administrator and his aids. The committee presently has a report in an advanced stage of preparation, but it, as well as printed copies of the testimony, will not be available for another week or so.

Consequently, my testimony here represents my own views at this time, although I believe that most of the members, at least, of my committee, will share these views after they have had an opportunity to review the hearings, staff field memorandums and the draft report.

May I say just a word with respect to our findings on the charges that redtape is ruining the new program and that it is an appalling flop.

The caution displayed in late 1958 because of fears the "fast buck" boys would invate the program was not only understandable, but also commendable, to my way of thinking. But, as I said at our hearings, this caution has tended to degenerate into an ultraconservative approach to administration as conditions now stand. There is now no phalanx of shady operators trying to knock down the gates. A high type of men, of great vision and courage, are, generally speaking, in control of the SBIC's.

Obstacles have been placed in their way needlessly. The law has been strictly construed; the rules adopted by the SBA have been similarly stringent. Worse than that, however, these rules, or redtape, have not been "currently published in the Federal Register" as required by law.

This failure to publish the rules of the game, as much as the restrictive contents of the regulations themselves, has created an undercurrent of resentment and has produced unnecessary delays.

Turning to the overall state of the program, I feel it is no longer quite fair to characterize it as a complete failure. A hopeful beginning has been made. On the other hand, it is certainly not yet the outstanding success we all visualized and desired when we passed the act. It needs both

legislative shoring-up and courageous, flexible, and imaginative administration.

Therefore, I am sure that our committee will make it clear that we expect those responsible for officially guiding the program to proceed with both diligence and aggressiveness. If your group reaches similar conclusions, I hope you will join with us in making the legislative intent crystal clear.

S. 2611

Our committee strongly believes that the enactment of S. 2611 will mark real progress in removing some of the most obvious bugs in this new mechanism. We were delighted when the Senate passed it last September, and I wish to urge upon you the favorable consideration of the two major and two minor provisions contained in the bill.

During our entire study, we found no opposition at all to S. 2611. On the contrary, everyone was united in the belief that these changes would improve the program. The added flexibility given to SBIC's to negotiate any form of equity investment with small businesses and the removal of the requirement for companies receiving funds to purchase stock in the SBIC are both important, noncontroversial first steps in our legislative campaign to make the 1958 act live up to its full promise.

Further amendments to S. 2611

I am convinced, however, that the changes presently embodied in S. 2611 are in themselves not sufficient to spur any vast new activity in this most important program. At first blush, the figures on the fist year and a half of the Small Business Investment Act seem significant; studied more carefully, however, the $40 million of private funds now invested in SBIC's shrinks to Lilliputian dimensions when measured against the $800 million of section 7 loans SBA has made and against the $6 billion which, according to the Federal Reserve Board, has been invested in the 1 million new businesses added to the business population since the end of World War II.

In the pages to follow, I shall spell out five specific recommendations which, I strongly believe, will convince small business investment companies and their organizers of the financial soundness of the program and give them every incentive to bend their efforts to closing the critical equity capital and long-term credit gap which has for so long hobbled successful and worthy small businesses. I shall also make one legislative proposal designed to keep usury out of the program.

Briefly, I recommend these positive steps:

1. The leverage of SBIC's should be bettered through increasing the amount of SBA funds available under sections 302 and 303.

2. Restricted stock options should be allowed by law so SBIC's may attract and keep the highly qualified managers they require.

3. The inherent risks in this program should be recognized through a statutory tax deductible bad debt reserve allowing a measure of tax deferral.

4. As is the case for mutual funds, SBIC's should be allowed to pass through capital gains.

5. Perhaps SBIC's should be enabled to utilize their skills and offset administrative and fixed costs by participation in SBA loans.

These changes should make it easier and more profitable to organize and operate small business investment companies. Therefore, I strongly urge legislative action to remove the taint of usury from the program. SBA now allows investment companies to charge up to 15 percent interest from small business borrowers. I cry out against such unconscionable rates and propose to set a legal maximum.

With your permission, Mr. Chairman, I should like to spell out each of these six recommendations.

STATEMENT OF HON. JOE L. EVINS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TENNESSEE

Mr. Chairman and members of the committee, I appreciate the opportunity to appear before you and to testify in regard to amendments to the Small Business Investment Act which the committee has under consideration.

As you know, I have the honor to serve as chairman of Subcommittee No. 1 of the House Select Committee on Small Business which is charged with the responsibility of reviewing the operations of the Small Business Administration. I have been asked to appear and present a statement before you in my capacity as chairman of Subcommittee No. 1.

During May and August of last year, extensive hearings were held by Subcommittee No. 1 on the organization and operation of the Small Business Administration with especial attention being given to the administration of the Small Business Investment Act of 1958. As a result of those hearings and subsequent investigation by the subcommittee staff, our subcommittee issued a report (H. Rept. 1252), which was unanimously approved by the subcommittee and by the full committee and submitted by our chairman—Chairman PATMAN—to the Speaker on February 8, 1960. Chapter II of this report deals completely with the Small Business Investment Act of 1958 and contains the conclusions and recommendations of the subcommittee.

I wish to discuss our committee's recommendations pertaining to amendments to the act as set out in the report. It is my understanding that this committee has before it S. 2611 and other bills to amend the Small Business Investment Act of 1958. I understand that one of these bills is H.R. 8096, which I was pleased to introduce on July 6, 1959, subsequent to our first hearings on these matters.

Let me state at the outset that, although the report of Subcommittee No. 1 of the House Small Business Committee and this statement will contain recommendations for some changes in the act, it is my feeling and it was the conclusion of Subcommittee No. 1 that there was nothing in the original act itself, if properly implemented which would have prevented this program from progressing as intended by Congress. The Small Business Investment Act of 1958 was and is a good bill. The purpose and intent of the act is good. It offered and still offers an opportunity for great aid to the small business economy of the Nation. The authors of the bill used imagination and a sound basic philosophy in sponsoring this legislation.

As this committee knows this act is not working out quite as most of us imagined and hoped. I think that when this legislation was introduced in the first place, we thought that groups of small businessmen or local development companies might take advantage of this legislation to organize investment companies using their own funds partly and partly using SBA funds as provided in the legislation. Such an investment company would have been sort of a small business cooperative and all of the small businesses involved undoubtedly would have been pleased to own stock in it. Furthermore, these purchasers of stock would have served to provide an influx of working capital and would have guaranteed that they would have always operated with small business in mind.

As we know, the SBA did not see fit to encourage this type of what are called pro bono publico companies. Instead, it has encouraged the formation of these banker type investment companies. Some of them are completely owned by banks. I am advised that 29 of the first 79 licensed investment companies are owned wholly or in part by banks. The SBA advises that 12 of these are actually owned by banks and the remainder of the 29 are tied in with banks through common top officials and, of course, this number does not take into consideration those which might be tied in with banks through other common interests.

Now, I still think and believe that the pro-bono publico type of investment company should be encouraged and I certainly hope that we will see the development of some of these kinds of investment companies yet. Meanwhile, we are faced with the fact that we have established now a number of these private investment companies and we are also faced with the problem of trying to make them work effectively. I think it must now be realized that with the type of companies that have been organized the major incentive is profitmaking and these companies will have to make money if they are going to be of any benefit to the small business economy of the Nation.

The testimony we have received from these investment companies and the SBA is unanimous that they need certain changes to be effective. Our subcommittee has, therefore, in order to supply the SBA and the investment companies with the tools they say they require, made some 10 recommendations pertaining to the Small Business Investment Act—3 or 4 relate to administrative changes. Our committee is recommending some six changes affecting amendments to the act.

Recommendation I is solely administrative and as a result, I will pass over it.

"Recommendation II: The Investment Company Act of 1940 and filings with the SEC: Consideration should be given to amending section 307 of the Small Business Investment Act of 1958 in order that subsection (c), which provides for certain exemptions under the Investment Company Act of 1940, be deleted and a provision inserted therein providing that these small business investment companies are not to be construed by law as being subject to the Investment Company Act of 1940.

"Meanwhile, the SBA and the Securities and Exchange Commission should continue efforts to coordinate their jurisdictional and administrative functions in such a way as will eliminate redtape and duplications of effort in order to facilitate the purposes of the act in the public interest."

It is recognized that the Security Act of 1933 with its disclosure mandate is a necessary control over the investment companies. But the Investment Company Act of 1940 is essentially a regulatory act and it is felt that it was not the original intent that it should apply to the type of investment companies which are created under the Small Business Investment Act of 1958. The constant day-to-day control that the SBA has over the investment companies should be sufficient regulation, the type which would be provided by the Investment Company Act of 1940.

H.R. 8096, which is now before you, contains an amendment which would exclude these small business investment companies from the Investment Company Act of 1940. S. 2611 does not contain such a provision.

"Recommendation III: Financing under section 302(a) and 303(b)—interest rate: The SBA should discard any policy it might have which would give preference to the licensing of small business investment companies which do not request Government funds for initial capitalization; and further that the SBA discontinue discouraging the furnishing of Government funds, authorized and appropriated by Congress, to these investment companies as expressed in the Small Business Act and the Small Business Investment Act.

"Consideration should also be given to amending section 302(a) and section 303(b) of the Small Business Investment Act to provide that the funds advanced by the SBA

to small business investment companies should be furnished at a rate equal to the rate charged the Small Business Administration by the U.S. Treasury for said funds, plus a fraction of 1 percent for overhead cost. It is recognized that this would probably entail a change in the bookkeeping method by which the SBA is financed through the Treasury Department.

"It is further recommended that the SBA not consider the increasing of the interest rate on section 302(a) and section 303(b) funds because of the increased market. It is the opinion of the subcommittee that since the rate was set at 5 percent when the cost from the Treasury was 2⅜ percent, the initial and interim increase should be sufficient and the line held if the provisions of the act are to be meaningful and effective."

Concerning this matter of interest rates on funds supplied to investment companies by the SBA, the present rate of 5 percent is not now out of line. But, at the time this rate was first established by SBA the situation was somewhat different—the interest rate being paid the Treasury by SBA under section 4(c) of the act was set at 2⅜ percent for fiscal year 1959. As we all know, with the drastic jump of interest rates during the past year and with the Treasury now charging the SBA 4⅛ percent for the money it obtains during the fiscal year, the 5-percent rate now charged by SBA is now more realistic and the provision in H.R. 8096 which would provide for pinning the rate the SBA would charge down to one-half of 1 percent above the cost from the Treasury is no longer of great concern; that is assuming that the SBA will not raise the rate of interest which is charged the small business investment companies. But, it is feared by some that if the SBA would set that rate at 5 percent when the cost of the money from the Treasury was 2⅜ percent, then they might increase this 5-percent rate since the rate charged now by the Treasury is 4⅛ percent. It is hoped that this will not be done. Also it is hoped that the interest rates will decline sometime within the near future and when they do so if the SBA still insists on maintaining a 5-percent rate then the principle incorporated in this proposed amendment (H.R. 8096) would then again become of extreme importance. In short, the need of the amendment is no longer immediately necessary, but the principle on which it is based still exists.

"Recommendation IV: Provision of equity capital for small business concerns under section 304: Section 304 should be amended in such a manner as to give the investment companies more flexibility in supplying equity capital to the small business concerns. An acceptable method should be sought whereby a small business concern might repurchase its equity from the investment companies.

"Consideration should be given to amending section 304(c)(2) in order to provide that the small business concerns will agree not to incur any additional indebtedness except open account or short-term indebtedness without first securing the approval of the investment company and giving this company the first opportunity to finance this indebtedness. The only change that this entails would be the insertion of the word 'additional' and the phrase 'except open account or short term,' in the appropriate section of the act."

Much testimony was adduced before our subcommittee to the effect that in addition to convertible debentures, the investment companies should be allowed to purchase from the small business concerns debentures with stock purchase warrants and perhaps even preferred or common stock. As you know, S. 2611 contains a provision which would amend section 304 to delete the portion concerning convertible debentures and to provide that the investment company should supply equity capital to the small business concerns "in such manner and under such terms as the small business investment company may fix with the approval or otherwise of the administration." This would place the matter of equity financing on open negotiation between the investment company and the business concern. I am advised that this would provide for greater flexibility and marketability.

But, when giving consideration to this suggested change, there are other things to be considered; more especially the interest of the small business concerns and their attitude of giving up partial ownership and perhaps control of their company. At the present time, under section 304(b), the business concern can at least cause the investment company to make a decision as to whether it will convert its stock now rather than holding it over the head of the concern for a number of years. This can be done by calling the debentures on 3 months notice. Under the proposed change this would be deleted from the act and would be left to open negotiations. Of course, open negotiations in the marketplace are a desirable factor, but many feel that when a concern must have money and there is but one place to get it, there is no real open market and the negotiations are unilateral. It is the feeling our subcommittee that an acceptable method should be sought whereby a small business concern might repurchase its equity from the investment companies. Of course, this is a very difficult field in which to legislate. Caution is desired because no change would be better than a change which would curtail the flow of equity capital into these business concerns. Repurchase provisions or other redemption factors could dmaage the marketability of this stock and a secondary market is certainly desired. On the other hand, the lack of repurchase options might well prevent small business from securing the equity financing needed. Fortunately, the testimony at our hearings indicates that some type of repurchase provision could be worked out that would be acceptable to both the small business and the investment companies. It should be pointed out here that there is nothing in the law at the present time to prevent repurchase options. In fact, testimony at our hearings indicated that some of these investment companies will be giving repurchase options.

The new section 304 proposed in H.R. 8096 contains such a repurchase provision. S. 2611 does not.

"Recommendation V: Compulsory purchase of stock in investment companies by the small business concerns: Section 304(d) of the Small Business Investment Act should be amended to provide that the small business concerns may have an opportunity to become stockholder-proprietors of the company by investing in the capital stock of the company in an amount equal to not less than 2 percent nor more than 5 percent of the amount of capital received from the investment company. This proposed change would make this stock purchase optional rather than mandatory.

"It is further the opinion of our subcommittee that at the time the act was passed it was the intent of Congress that the small business concerns should invest in the investment companies, and that the regulation adopted by the SBA which allows the investment companies to have a 30-day repurchase option on this stock was a modification of the act. That portion of section 107.304–1(h) of the regulations which provides for this repurchase option should be deleted and discontinued in practice by the SBA. It is the opinion of our subcommittee that if the Congress desires to amend the compulsory stock purchase requirements it will do so, but as long as it remains in the law it should be complied with fully. The SBA should give the appropriate committees of Congress its recommendation concerning the effect of this provision of the law in the operation of the program."

The testimony at the hearings before our subcommittee was unanimous that the present requirement which makes it mandatory for a small business concern to buy stock in the investment companies when they obtain capital from the investment companies is a handicap.

On one hand, it was testified that the small business concerns see in this provision just an added cost. I understand that the cost of financing through these investment companies is often well in excess of 10 percent and if the small business concern also buys stock in the investment companies the effective total cost very often will be increased to 15 or 20 percent. On the other hand, the investment companies themselves, of course, do not want their own ownership of the investment company diluted; and they say that more investment companies would be organized if this provision were removed. Our subcommittee has recommended that the present mandatory requirement be removed. However, we do feel that the small business should have the option or opportunity to buy stock in the investment company if they desire to do so. Subcommitee No. 1 feels that this compromise is a realistic one which will, to some extent, preserve the basic philosophy upon which this act was based and at the same time help to make the present investment companies operate more effectively.

As you know, S. 2611 would completely eliminate this stock purchase provision whereby H.R. 8096 would eliminate the mandatory requirement but would retain in this stock purchase provision a requirement that the small business concern should be given an opportunity to purchase stock in the investment company.

"Recommendation VI: Direct loans to small business concerns and aid to unincorporated small business: Section 305(a) of the act should be amended in such a manner as to indicate that the making of loans to small business concerns is also a 'primary' function of these investment companies just as is that portion of the act that provides they will supply equity capital.

"The subcommittee is of the opinion that the SBA should change its policy which prohibits the participation by the SBA with the small business investment companies in making loans. It is felt that, as the act is presently worded, there is nothing to prohibit this participation. Participation by SBA is provided with banks in its financial assistance program. A deferred or immediate participation by the SBA would have the practical effect of supplying a source of supporting funds for these investment companies and should encourage the making of loans to sound small business enterprises."

Section 304 of the Small Business Investment Act provides that it should be a "primary" function to provide equity capital and section 305 of the act provides for direct loans, failing to indicate that this was "primary."

Subcommittee No. 1 feels that the loan program under section 305 of the act is a vital and important function and should be on an equal plane with the equity financing portion under section 304.

S. 2611 would eliminate the word "primary" from section 304. I believe it would be preferable to leave it in and add to section 305 that it would also be a "primary" function to provide direct loans.

"Recommendation VII: Rediscounting agency: Consideration should be given by Congress and the SBA to the establishment of a rediscounting agency or refinancing arrangement for the purpose of rediscounting loans made by the small business in-

vestment companies and creating a secondary market for convertible debentures or stocks obtained from small business concerns by the small business investment companies."

A readily available secondary market or rediscounting agency is a necessity if the small business companies are going to survive and prosper as intended by Congress. There is some evidence that the investment companies will be in danger of becoming "locked in" unless a readily available secondary market is open to them. It is, of course, hoped and expected that private funding sources will be available to these investment companies but it is also felt that it would be an error to provide machinery for establishing equity capital and long-term credit for small businesses unless consideration is given to providing facilities for the necessary financing with which to culminate or effectuate the program. The creation of a rediscounting agency similar to the Federal National Mortgage Association or the Federal Intermediate Credit Bank might be desired.

"Recommendation VIII: Geographical limitation of the act: The Small Business Investment Act of 1958 should be amended to provide that the geographical limits of the act would include the territory of Guam.

"This could be provided for by an amendment to section 103(4) of the Small Business Investment Act to provide that the term 'United States' include, in addition to the Commonwealth of Puerto Rico and the District of Columbia, the territories of the United States."

Other recommendations pertain to administrative matters.

Mr. Chairman and members of the committee, this completes my statement. These matters are dealt with more extensively in the text of chapter II of our report, a copy of which has been made available to each of you.

Maritime Unions Sharpen Issue on Arab Blacklisting

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. ROOSEVELT. Mr. Speaker, a short time ago, I addressed this body on the need for a firm, a moral U.S. policy in the matter of meeting United Arab Republic President Gamal Nasser's program of boycott and blacklisting, in violation of international law and justice.

This is not a matter that is academic; Nasser's actions and policies are affecting the jobs of our seamen who recently demonstrated, as a final recourse, against Nasser's blacklisting activities.

In a press release issued on April 14 the Seafarers International Union charged that:

President Gamal Nasser of the United Arab Republic has brazenly flouted international law and created a blacklist of American ships, thus threatening job opportunities for American seamen and others whose livelihood depend upon the American merchant marine.

The release also relates why a protest demonstration was held by members of the Seafarers International Union and International Longshoremen's Association, both AFL–CIO affiliates, when the Egyptian-flag passenger-cargo ship *Cleopatra* docked in New York.

The position and action taken by these two unions and their members brought a warning from the State Department, a warning based on the view that the situation was embarrassing the conduct of our foreign relations. I am also inserting the April 27 New York Times story relating the views of the State Department and some background information on the picketing undertaken by the two AFL–CIO unions.

In addition, Mr. Speaker, so that the record may be complete, I insert a press release issued by the Seafarers International Union in answer to the State Department charges.

The press release, I think, correctly points out that:

It would appear to us that with the American flag being affronted, American ships being harassed and American seamen being mistreated, the source of the State Department's "embarrassment" should be its failure over the years to have prevented this situation from existing, rather than being "embarrassed" because of possible diplomatic repercussions.

The three items follow:

PRESS RELEASE ISSUED BY SEAFARERS INTERNATIONAL UNION, APRIL 14, 1960

NEW YORK, N.Y.—American maritime workers charged today that President Gamal Nasser, of the United Arab Republic, has brazenly flouted international law and created a blacklist of American ships, thus threatening job opportunities for American seamen and others whose livelihoods depend upon the American merchant marine.

The maritime workers also called upon the U.S. Government to notify Nasser that it will use all the resources at its command to restore international law and freedom of the seas.

They demanded that, if necessary, the Government should put into force a twofold program as follows:

1. Order the U.S. Navy not to purchase oil in any port where American ships are blacklisted, since sufficient oil is obtainable in Venezuela, Iran, Indonesia, and in Texas, where oil producers have been working at half capacity for over 2 years.

2. Halt the shipment of Government-financed farm surplus cargoes to any nation which blacklists American shipping.

The charges and demands were made during a protest demonstration by members of the Seafarers International Union and International Longshoremen's Association when the Egyptian-flag passenger-cargo ship *Cleopatra* docked at Pier 16, East River.

The Egyptian ship was greeted by union members who carried signs denouncing Nasser's policies. The signs made it clear that the demonstrators had no quarrel with the ship or the Egyptian seamen who were welcome here. But they also charged that American seamen have been abused and vilified in Egyptian ports.

Paul Hall, president of the Seafarers International Union, summed up the purpose of the demonstration by pointing out that the U.S. Government, despite paying lip-service to the principle of freedom of the seas, has done nothing to oppose Nasser or to ease the economic and personal hardships suffered by American ship operators and American citizens who man these ships.

"The Government may do nothing," he asserted, "but we don't believe the American public will swallow this without a murmur." Certainly, American maritime workers do not intend to take this sitting down.

Thomas "Teddy" Gleason, general organizer of the International Longshoremen's Association declared, "As members of the Maritime Trades Department, AFL–CIO, and the International Transport Workers Federation, our organization is participating in this protest to help restore full freedom of the seas for the benefit of our brother maritime workers all over the world. As longshoremen, we are vitally concerned with the preservation of freedom of the seas as essential to the flow of cargoes and the livelihood of our members. We are also vitally concerned with the preservation of the liberties of maritime workers wherever they may go."

Mr. Hall asserted that Colonel Nasser has denied freedom of the seas and the right of unrestrained passage through the Sucz Canal by placing many American-flag vessels—as well as the ships of other nations—on a blacklist. This was done, he said, because at some time these ships have carried cargoes to or from Israel, or called at an Israeli port for food or fuel. As a result of this blacklist, American ships in some instances have been denied the right to even carry U.S. Government cargoes to and from Middle East ports.

"Our Government," he asserted, "is on record against interference by any nation of a ship's right to move freely in all parts of the world. Yet official agencies of the U.S. Government have, in effect, supported the blacklist."

Mr. Hall noted that President Eisenhower, at a recent press conference, has declared that it is "certainly not our policy" to assist or support blacklists or ship discrimination by any government against American-flag or other vessels.

"Yet," Mr. Hall asserted, "American Government agencies are continuing to follow policies which, in effect, make it impossible for American ships to obtain Government cargoes if they have ever touched an Israeli port."

[From the New York Times, Apr. 22, 1960]

UNITED STATES WARNS PICKETS OF UNITED ARAB REPUBLIC SHIP HERE

(By E. W. Kenworthy)

WASHINGTON, April 21.—The State Department said today that the picketing of the Egyptian ship *Cleopatra* by seamen in New York was "embarrassing" the conduct of U.S. foreign relations.

The State Department expressed concern that if the picketing became protracted there would be widespread reprisal action against U.S.-flag vessels by labor unions in Arab countries.

The 8,193-gross-ton *Cleopatra*, owned by the Khedivial Mail Line of Alexandria, United Arab Republic, arrived at pier 16, East River, from Mediterranean ports April 13.

Immediately the Seafarers International Union put pickets at the ship. Members of the International Longshoremen's Association refused to unload her.

The seamen's union said it was acting in protest against the boycott by Arab countries of ships that had traded with Israel or called at Israeli ports.

The United Arab Republic has barred such ships from its ports and from transit through the Suez Canal.

Representatives of the ship's owners and the United Arab Republic protested that the picketing was for a political purpose and that no legitimate labor dispute was involved.

Paul Hall, president of the seamen's union, insisted that many U.S. seamen had lost jobs because of the Arab boycott.

RIGHTS ARE RECOGNIZED

In a statement today the State Department said it recognized the right of Americans to free speech and "the special status to labor union picketing in labor disputes."

The Department said it also understood the union's position that the Arab boycott

was "discriminatory against American shipping and seamen."

"From the foreign policy standpoint, however, it should be made clear that the picketing is regarded abroad as a political demonstration related to the United Arab restrictions against Israel," the statement continued.

"The U.S. Government has repeatedly emphasized that it does not condone the Arab boycott, which is one of the many unfortunate outgrowths of the whole Palestine situation.

"However, with such complex questions involved, an effort by a private group to apply pressure publicly with a view to bringing about shifts in the policies of foreign governments is, of course, embarrassing to the conduct of our Government's foreign relations and may have unfortunate consequences."

Asked to specify what these consequences might be, a State Department spokesman observed that unions in the Middle East were contemplating widespread reprisal action against U.S.-flag vessels if the New York picketing continued.

"We would hope that the situation would not proceed to the point at which there would be strong counteraction against American shipping and American seamen in foreign ports," the spokesmen said.

Dispatches from Lebanon yesterday said Syrian dockworkers had refused to unload two U.S. cargo vessels in Latakia or to load two American tankers at Baniyas.

PICKETING CONTINUES AT PIER

Picketing of the *Cleopatra* by members of the Seafarers International Union and the International Longshoremen's Association continued yesterday.

The owners of the vessel have sought a preliminary injunction in Federal court to bar the picketing.

Meanwhile, Capt. Behaldim Mandour, master of the *Cleopatra*, has ordered a sundown curfew for his 103-man crew.

The order was called as a precaution as a result of an assault by an unidentified man on Mahmoud Ezz-el-din, a ship's steward, near the pier Tuesday night. The steward is in Bellevue Hospital for treatment of a lacerated left eye.

PRESS RELEASE ISSUED BY SEAFARERS INTERNATIONAL UNION, APRIL 22, 1960

Statement by Paul Hall, president, Seafarers International Union, in reply to State Department announcement of April 21:

"The State Department yesterday announced that it was concerned about the threat of widespread blacklisting of American merchant ships by the United Arab Republic. As a matter of fact, the picketing of the SS *Cleopatra* arises directly out of our concern with the same problem, the blacklisting of American ships.

"The decision to picket the *Cleopatra* was taken after lengthy consideration and only after other efforts to obtain relief for the American-flag vessels and crews involved had been unsuccessful.

"This latest threat by the United Arab Republic is merely an extension of an existing blacklist of a very considerable segment of American shipping, over 100 ships in all, which has been in effect for several years.

"Before the Seafarers International Union of North America, AFL–CIO, and the International Longshoremen's Association, AFL–CIO, decided to resort to picketline action, great effort had been expended to obtain relief from our Government. We had protested to President Eisenhower that American vessels and maritime workers were being denied rights available to ships and seamen in times of peace under international law and treaty. As a result, we were advised by our State Department on March 2, as follows:

"'Our Government has never condoned the Arab boycott. The United States has consistently made clear to all parties concerned its strong disapproval of the boycott regulations.'

"Beyond expressing disapproval of the boycott, the U.S. Government has taken no effective action to protect the American flag in international trade. Furthermore, other agencies of the U.S. Government directly connected with shipping, such as the Department of Agriculture, have said that the boycott is no concern of theirs.

"The situation reached an acute stage a month ago when crews of vessels under contract to this union, began notifying us that they were abused, mistreated and, held virtual prisoners in Egyptian ports. The crew of the SS *Westport*, a ship on the Egyptian blacklist, were restricted aboard their ship for 22 days in Port Said, and their documents taken away. Similar treatment was accorded crew members of the *Valiant Faith* and the *Rockland*.

"It was at this point that the unions were compelled to take immediate action to protect the rights and job opportunities of the seamen involved and to secure observance of international laws designed to protect the rights of seamen and vessels everywhere.

"We must therefore point out that our Nation must act to preserve the principles of international law, freedom of the seas and the rights of American seamen and American ships.

"The State Department has expressed 'embarrassment' over this situation. It would appear to us that with the American flag being affronted, American ships being harassed and American seamen being mistreated, the source of the State Department's 'embarrassment' should be its failure over the years to have prevented this situation from existing, rather than being 'embarrassed' because of possible diplomatic repercussions.

"While our own members are directly affected, in our opinion it would be a great mistake to consider this problem as being restricted to maritime workers and their employers. It is a problem that should be of concern to the entire American community."

Past Presidents' Day

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. FASCELL. Mr. Speaker, I have been privileged to sponsor legislation in previous Congresses authorizing the President to proclaim April 30 of each year as Past Presidents' Day.

The purpose of this legislation was to call the attention of our people via such a Presidential proclamation to the tremendous tasks and responsibilities of the Office of the President, as well as to the admirable, outstanding achievements of all of our great country's Presidents down through the years.

I am proud to call the attention of our membership to the action taken by Florida's distinguished Governor, LeRoy Collins, in proclaiming April 30 as Past Presidents' Day in Florida.

The proclamation follows:

PROCLAMATION—STATE OF FLORIDA, EXECUTIVE DEPARTMENT, TALLAHASSEE

Whereas the Presidents of the United States have been men of great integrity, bringing to the post of Chief Executive the quality of leadership that has made our country admired and respected throughout the world; and

Whereas the achievements of our past Presidents have advanced the progress and development of our Nation, contributed to the general welfare, and have led us to a position of world prominence; and

Whereas it is fitting that one day of each year be designated to honor those who have so ably led our Nation in peace and war: Now, therefore

I, LeRoy Collins, by virtue of the authority vested in me as Governor of the State of Florida, do hereby proclaim April 30, 1960, as Past Presidents Day in Florida, and urge all the citizens of Florida to consider the heavy responsibilities borne by our past Presidents and the sacrifices they have made in guiding the Nation.

In witness whereof, I have hereunto set my hand and caused the great seal of the State of Florida to be affixed at Tallahassee, the capital, this 1st day of April A.D. 1960.

LEROY COLLINS,
Governor.

Attest:

R. A. GRAY,
Secretary of State.

Hon. Wayne N. Aspinall

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. ROGERS of Texas. Mr. Speaker, those of us who have worked with WAYNE ASPINALL over the years know, of course, of the large role he has played in keeping an adequate Federal reclamation program going, not just for his State or area, but for the entire West. I am pleased to include in the RECORD as a part of these remarks an editorial which indicates that others are beginning to recognize the tremendous job he is doing and want to give some recognition now to his fine work. The editorial is from the April 20, 1960, issue of the Daily Sentinel, Grand Junction, Colo.:

NAME ONE FOR WAYNE

It is our considered opinion that one of the upper basin lakes to be constructed by a reclamation project such as the Curecanti, or one of the huge dams, should be named for Congressman WAYNE ASPINALL.

Certainly the West, and particularly Colorado, has no Representative who has done a small fraction as much for reclamation as WAYNE ASPINALL over the past decade. At present he is really the only man in Congress with the power to do so who is actively promoting reclamation projects.

Concerted action should be forthcoming from all over Colorado to promote the suggestion and see it carried through. Without doubt support would be forthcoming from Utah, Arizona, New Mexico, and Wyoming. These States probably appreciate better than Colorado does the role which ASPINALL has played and is playing in the development of the West. Any objection that it is not customary to make such a gesture during a man's lifetime could be overcome by concerted effort on the part of Colorado. Certainly the custom has been disregarded many times in the past for lesser reasons.

It is fitting that the first move for the plan should come from this congressional district. It recalls the fact that the father of the Taylor Grazing Act came from the same district. The act named for Edward T. Taylor of Glenwood Springs perpetuated his memory forever in the conservation annals of the West. Much of the reclaimed grazing land is actually the real monument to Ed Taylor.

By the same token much of the food supply of the United States and perhaps of the world will be a monument of WAYNE ASPINALL long after he is dead and gone and the time of farm surpluses will have been forgotten.

The West, and particularly Colorado, can never repay Congressman ASPINALL for the dedicated service he has rendered the reclamation and all development of western resources. Naming a reclamation dam or lake for him would be only a gesture. It would be one through which the West could tell WAYNE ASPINALL as well as the Nation that it recognizes the importance of his work and appreciates what it means to the future of the West, the Nation, and the world.

Thirty-nine Thousand Two Hundred and Fifteen Floridians Answer Rogers' Questionnaire

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. ROGERS of Florida. Mr. Speaker, this year, as in the past, I sent out a questionnaire to the people of the Sixth District of Florida to seek their views on some of the issues expected to come before this session of Congress.

The results of this questionnaire should be of interest to all Members, and for that reason I ask that they be included in the RECORD today.

The questionnaire is printed in each newspaper in the district, and some direct mailing is done. It has grown during the last 6 years from an initial response of 3,000 to today's total of 39,215.

The poll represents the views of people in the 11 south Florida counties making up the sixth district..

On the gulf coast the fishing industry, farming, and cattle raising are chief occupations along with tourism. In this area there are several large developments of retired people from all over the country.

The central portion of the district includes Lake Okeechobee and the sugar producing area of Florida, in addition to some of her finest cattle ranches and truck farms.

Along the east coast of Florida the district includes citrus producing lands, tourist centers and one of the Nation's chief sources of winter vegetables and flowers.

In addition to farming, cattle, citrus, and tourism the district has industry of all kinds from the manufacture of boats to heavy jet and rocket engines. Deep water ports handle imports and exports to many areas of the world.

With these facts in mind I believe that the poll represents a good cross section of thinking of the American people throughout the country, represented by business, labor, farmers, ranchers, and the retired.

The results of the poll this year are as follows:

RESULTS OF CONGRESSMAN PAUL G. ROGERS' ANNUAL QUESTIONNAIRE—TOTAL ANSWERS RECEIVED: 39,215

1. Do you favor a Federal fair trade bill which would authorize manufacturers of brand name merchandise to set minimum resale prices on such goods at the retail level? No, 22,747, 60 percent; yes, 15,165, 40 percent.

2. A Senate committee is presently investigating drug prices. Do you think the Federal Government should take action in this field? Yes, 32,699, 85 percent; no, 5,780, 15 percent.

3. Should the interest ceiling on long-term Government bonds be raised? Yes, 19,302, 54 percent; no, 16,442, 46 percent.

4. Proposals have been offered to raise the minimum wage from $1 to $1.25 and extend the coverage of the present law. Do you favor such a proposal? Yes, 23,903, 63 percent; no, 14,039, 37 percent.

5. Do you favor elimination of Federal price supports to farmers? Yes, 31,030, 83 percent; no, 6,597, 17 percent.

6. Do you favor a cut in foreign aid spending? Yes, 32,046, 85 percent; no, 5,655, 15 percent.

7. Do you favor using Federal funds for: (a) school construction: No, 19,375, 51 percent; yes, 18,616, 49 percent; (b) teachers' salaries: No, 24,718, 66 percent; yes, 12,736, 34 percent.

8. Do you favor my proposal by which our national debt would be reduced by not less than 1 percent each year? Yes, 36,545, 97 percent; no, 1,130, 3 percent.

Civil Rights

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. CEDERBERG. Mr. Speaker, efforts of the Communists to utilize the civil rights issue to discredit the United States in the eyes of the world were recently exposed before a South American audience by Dr. John A. Hannah, Chairman of the U.S. Commission on Civil Rights and president of Michigan State University. Dr. Hannah very ably outlined some of the problems involved in an effective civil rights program in discussing the matter at a convocation held by the Brazil-United States Institute in Rio de Janeiro.

The Michigan State University magazine reports on Dr. Hannah's remarks in its April issue and I present it for the consideration of my colleagues of the House:

CIVIL RIGHTS

President John A. Hannah has returned from a trip to South America in which, as one of his tasks, he sought to give a clearer picture of civil rights in the United States.

His trip, on which he visited Michigan State projects, especially the Institute of Business Administration at São Paulo, was sponsored by the Federal Government. He met President Eisenhower at São Paulo and had an extensive talk on foreign aid with the President's brother Milton.

As Chairman of the Commission on Civil Rights, Dr. Hannah delivered an address on the subject at a convocation held by the Brazil-United States Institute in Rio de Janeiro.

The decision to give the speech abroad was made, Dr. Hannah says, because "the Communists are discrediting us all over the world by magnifying Little Rock."

"We're not perfect," he told the Brazilians, "but we are making strides in civil rights."

A knowledge of certain fundamental characteristics of the United States is essential if we are to understand our civil rights problems, Dr. Hannah asserts. But these points are often overlooked even by Americans, he adds, "so it is not to be wondered at that they are not generally understood elsewhere in the world."

American history and tradition are deeply involved in the civil rights picture Dr. Hannah mentions.

First, he says, State sovereignty must be considered, for "the historic constitutional issues in our country have arisen over disagreements as to the extent of Federal powers to regulate the lives and activities of citizens within their respective States."

Included in State sovereignty and the delegation of governmental power, the MSU president explains, is the breakdown into school districts—as in Michigan with its 2,250 independent school systems.

In most school districts a local board of education has charge of curricula, teachers, salaries, and textbooks.

"All of this is essential," Dr. Hannah says, "to an understanding of why we in the United States have been wrestling with the problem of school integration—the admitting of Negroes to schools attended principally by white children.

"It has long been the practice in the Southern States of our Union to educate Negroes in separate schools of their own, and whites in their own schools.

"In some countries, the practice could have been ended by a decree from the central government accustomed to imposing its control on schools throughout the nation. But not in the United States—local control of education is a tradition in our country and one we would be reluctant to give up."

The Supreme Court ruling that no American child may be denied admission to any school because of race or color, Dr. Hannah continues, had the effect of opening all-white schools to Negroes, with many Southern States protesting it was a violation of States' sovereignty.

"When the law and the issues are clear, Federal coercion of the States is a final and extreme resort to which we seldom turn. Hence, in many of the Southern States there developed what has been called 'massive resistance' to the Supreme Court decision."

Dr. Hannah says, however, that there has been a noticeable lessening of resistance to the Court's ruling.

The second pertinent fact about American history and civil rights, he explains, "is that from the time our country was founded there has been a difference of opinion as to the wisdom of extending the principle of equal opportunity and justice to all men."

Slavery was in existence when the Government of the United States was founded, he says, and it was necessary to compromise to achieve a union, although the founders of the country believed slavery would wither away.

"That they were wrong, we know now. Slavery persisted, and was not ended until we had suffered the agonies of a great civil war."

Achievement of our theoretical ideals, he says, has always been measured principally by our success or failure in dealing with the Negro problem.

In theory, Dr. Hannah continues, constitutional amendments after the Civil War extended full and equal rights to all citizens, including Negroes.

"In practice, we had turned into the mainstream of American life as free men and women some 4 million human being descended from ancestors who had been torn from their roots in Africa. They had been kept in slavery, and they had almost no education or training for the full citizenship they were now to enjoy."

It is of great significance, he says, that no additional civil rights legislation was passed by Congress between 1875 and 1957, when it was decided that an objective commission should be created to investigate allegations that civil rights were being denied because of race, color, religion, or national origin.

The Commission on Civil Rights was ordered to investigate charge that some citizens were denied the right to vote, and authorized to make other studies concerning denial of equal protection of the laws for all citizens.

Voting, education, and housing were studied in the Commission's first period of activity, he relates.

"Sworn affidavits and public hearings soon revealed what had long been suspected —that in some sections of our country large numbers of Negroes were indeed being denied the voting franchise. It was humiliating to find that disenfranchised Negroes were often heroic veterans of our country's wars, and that many of them were professional men and women holding the highest academic degrees.

"It was indefensible that a great majority of them were paying taxes for the support of government whose officials they could have no voice in choosing."

The Commission reported its findings to President Eisenhower and Congress, with recommendations for corrections.

In education, Dr. Hannah says, "the Commission has been able to document the instances of discrimination." But:

"Against the stories about Little Rock and about school bombings, I could set many instances in which men and women of good will sat down together and worked out solutions to their community problems in the best interests of all."

Both in voting and in education he believes the prospects are encouraging for the achievement of American ideals.

In housing, however, he says the problem is more complex.

For one thing, initiative and authority rest not with governmental units but with individuals.

Another reason housing is a more complex problem is that Negroes alone are not involved. Dr. Hannah lists Puerto Ricans, as in New York; Spanish Americans, as in the Southwest; Oriental Americans, as in the West; and American Indians to a minor degree.

Hearings on the problem have been held in Atlanta, New York, Chicago, Los Angeles and San Francisco, with patterns and principles beginning to evolve, Dr. Hannah adds.

"We are beginning to understand better than ever before how essential decent, respectable housing is to the development of good citizenship in a democracy. Education and voting rights are of little value if minority groups are forced by any circumstances to live in slums, are crowded together beyond the limits of decency, and are denied any hope or prospect of improvement in their lot."

The Commission's task is not a pleasant one, he asserts.

"No American, proud of his country, enjoys turning the pitiless searchlight of truth upon its shortcomings and deficiencies.

"We are sustained in our unpleasant task by the belief that only by disclosing our weaknesses can they be corrected. As a people, we are historically and traditionally intolerant only of injustice and inequality."

Speaking about willingness to confess America's faults and the soul-searching over civil rights, Dr. Hannah notes that, "All of our history, speaking generally, reflects a constant concern that we have not as yet achieved the ideals to which we officially and traditionally aspire."

Dr. Hannah mentioned that the Swedish scholar, Gunnar Myrdal, stresses the fact that American self-criticism sometimes amazes and pains our friends and gives aid and comfort to our enemies, as when communism seeks to capitalize on our struggles with racial problems.

"We are not perfect, nor do we claim to be," he says. "We just happen to think that honesty is in the long run by far the best policy, even in a world where there is so much international duplicity and deceit."

Dr. Hannah gives examples of achievements already made toward declared goals in the field of human rights and liberties.

At the end of the American Revolution, he says, the Nation numbered 3,250,000 persons, of which only 120,000 could vote. The others were slaves, women, those who did not own property of sufficient value, were not of proper age or for some other reason were denied the voting franchise.

"The lag in Negro voting in some sections of the South is almost the sole remaining disfiguring blot on a record of which we are proud."

In 1950, he continues, there were slightly more than 97 million persons of voting age, with 5 million Negroes of voting age in the South where restrictions are most often encountered.

"We think 4 percent is still too large a proportion of those entitled to vote—but we could as well be boasting that 96 percent exercise the voting franchise freely."

In education, about 8.6 percent of the schoolchildren in 10 States are causing us active concern, Dr. Hannah says, and they represent a minute fraction of all the children in all public schools.

"Thus our penchant for self-criticism holds us up to world censure because of a small percentage of our schoolchildren, when we should have the world's applause for having come so close to extending full and equal opportunity to all schoolchildren of whatever race."

President Hannah gives an amusing example of how, even in the United States, strides to wipe out discrimination are not fully appreciated.

He relates that Michigan State University recently received a questionnaire from the staff of the Commission on Civil Rights, asking for a report on the number of those in minority groups within the student population.

"The university of which I am the president could not reply to the Commission of which I am the Chairman," he says, "because we do not keep such statistics, nor have we done so for many, many years."

Students at Michigan State, as at most other public universities in the United States, are not asked to disclose their race, religion or nationality when making application to enroll.

"We simply do not care whether they are white or black or brown or yellow," Dr. Hannah asserts, "whether they are Catholic or Protestant or Jewish, whether they are native born or have emigrated to our country. We are interested in their mental capacities and moral character and nothing else.

"All of us—indeed, the whole Western World—pay deference to the ancient and noble idea that the individual human being is of supreme worth, that his person and his dignity should be secure against degradation. This is what civil rights are all about."

Goals for America

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. VANIK. Mr. Speaker, at the Democratic Midwest Conference, which was held at Detroit, Mich., on March 26, 1960, outstanding leaders of the Democratic Party dedicated themselves to the consideration of national issues in order to inform the American public as to the goals of the party.

Among the splendid statements submitted, the following on metropolitan problems was presented by Mr. William Coleman, chairman of the Democratic Executive Committee of the State of Ohio. Mr. Coleman made a concise and well-considered presentation of the needs of urban communities.

The statement follows:

METROPOLITAN PROBLEMS—POLICY STATEMENT, DEMOCRATIC MIDWEST CONFERENCE, DETROIT, MICH., MARCH 26, 1960

U.S. Bureau of the Census in 1950 defines a standard metropolitan area as including 1 central city of not less than 50,000 population for the entire county in which it is located along with adjoining areas which have dependent economic and social populations. At the last census there were 174 such areas in the continental United States comprising more than half of the Nation's entire population. Metropolitan area population has consistently shown a more rapid growth than the national population.

Within the metropolitan areas figures show that the greatest population growth occurs in the suburban areas, at a rate of more than 2 to 1 over population increases in the central cities. The 1960 census is expected to show remarkable increases of the above figures. This has been established by a number of surveys during the 10-year period which all point to the fact that the population growth of metropolitan areas has been proceeding at a very rapid pace.

The Twin Cities Metropolitan Planning Commission reports that U.S. population has increased more than 20 million since 1950, with nearly 95 percent of this increase occurring in the Nation's 174 metropolitan districts.

It is important to note here that these growing population areas with the emphasis on suburban area growth, are spilling over county and State lines. In 1950 there were 24 metropolitan areas in the United States which crossed State lines. The Council of State Governments reports that 29 other metropolitan areas have, or soon will become interstate.

Using these figures it can be said that more than a fourth of the Nation's population is living in metropolitan areas that are interstate or soon will cross State lines.

Two articles in February editions of the Saturday Evening Post under the title of "Our Urban Revolution," report on "the biggest migration in our Nation's history—the great outpouring from the cities into the suburbs—and the profound social, economic, and political problems that we face as a

result." These articles describe a great "strip city of nearly 30 million people that is beginning to spread for 600 miles along a narrow belt of northeast coast, from north of Boston to south of Washington."

Even before we have begun to solve our metropolitan problems, the sociologists are envisioning a "megalopis" comprised of many metropolitan areas.

The Post article says the great migration that is filling up the space between the cities is not, therefore, a movement of people only. It is a movement of industry as well. Factories no longer tied to ports and harbors and railroad junctions, can be set up wherever the highway runs and the cloverleaf of the great expressway will become a center of sprawling city of tomorrow.

The problems attendant to these gigantic population concentrations stagger the imagination. Even now, there has been relatively little real effort made to meet the problems of our metropolitan areas which are concerned with cities over 50,000 population.

The Council of State Governments reports that the number of local governmental units averages 96 in each metropolitan area. Furthermore, as metropolitan areas grow, local governments have in most cases increased in number.

Perhaps the major problem arising from this situation is the inability of limited-jurisdictional units of government to deal with the overall problems of their areas.

The Government Affairs Foundation, Inc., reported in 1958 that a total of 112 general metropolitan surveys have been made in the United States since 1923. Of these 79 were initiated during the 10-year period 1948 to 1957.

A review of these surveys by the foundation showed that the studies generally agreed that the following four results seem to occur almost universally as the aftermath of mushrooming metropolitan growth:

1. The serious consequences of the absince of any areawide instrumentality to cope with areawide needs and problems are probably the greatest point of agreement among the survey findings. The question is how a multitude of local governments of varying size and competence can cope with areawide problems.

2. Inequities in financing local government services in the metropolitan area also are the concern of most surveys. An example of this is city services and public facilities financed from city taxes, which benefit the nontaxpaying suburbanites.

3. The inadequacy, or absence, of certain governmental services in parts of metropolitan communities.

4. The existence of barriers to democratic control of government in metropolitan communities. Complexity, duplications, and overlapping jurisdictions have caused dilution of citizen control of government.

The Council of State Governments says the metropolitan problem unquestionably is one of the most critical domestic difficulties facing an increasingly urban United States. "It presents a major challenge to the ingenuity of the people of our democratic societies * * * local governments are increasingly incapable of satisfying public needs that extend beyond individual governmental boundaries or range of authorized functions."

The council recommends that each State should establish legal authorizations for the creation of general metropolitan units that will be adequate in functions, financing ability and structure.

The council recommends three types of metropolitan government—the multipurpose metropolitan district, the federation arrangement, and the comprehensive urban county form.

The basic features of all three plans are the establishment of a metropolitan level of government to assume areawide functions and the retention of local governments to perform strictly local activities.

This committee believes that citizen participation on every level of local government is most important and must be retained in any governmental superstructure devised to meet these new problems.

Gov. Edmund G. Brown of California has appointed a 19-member commission on metropolitan area problems. He directed the group to make a serious study of metropolitan government.

"Explosive growth," he declared, "knows nothing about manmade boundary lines. The role of the commission will be to give statewide study and thought to the problems before they overwhelm us all."

The Governor listed five areas of inquiry for guidance of the committee in its work:

1. Transportation, freeways, rails, and streets, "how best can we move millions of men to and from work?"

2. Housing, redevelopment and land use planning, "how can we keep the central areas of cities from becoming slums?"

3. Maximum economy in handling the tax dollar, "do we have too many overlapping jurisdictions?"

4. Prevention of air pollution and water contamination, "what new measures are necessary to prevent poisoning of air in metropolitan regions?"

5. Larger governmental structures or districts, "what are the values and limitations of supergovernmental agencies?"

He declared that inflexible ideas should be abandoned and thinking should be in terms of meeting the needs of the communities of that State.

The 1955 Wilder Foundation report on Cincinnati, Ohio, clearly pinpoints the problem of the core areas of cities when they are deserted for suburban residential communities.

The Wilder report says the core cities of metropolitan areas have thus been forced to cope with increasing burdens of poverty, disease, and crime in blighted areas whose taxable wealth has exhibited a constantly decreasing ratio to the cost of administering them.

The Wilder report also points out that the core city is losing its most intelligent citizens who are best qualified for city government in the immigration to the suburbs.

The Wilder report and other surveys point to a fact that annexation has failed for the most part as a means for the core city to expand. The borough plan or federation of large communities has failed to receive public acceptance and therefore it does not present a solution. The city-county consolidation plan has gained little public acceptance because it represents the elimination of many incorporated areas and the vesting of all local autonomy in a single government usually remote from the localities within its jurisdiction.

The Council of State Governments believes the transforming of county governments into metropolitan units offers the greatest possibilities for effective metropolitan government. They point out that county lines usually more closely approximate the limits of metropolitan areas than do the boundaries of general local units. They argue that county governments have been growing stronger and that the conversion is easier to accomplish rather than create new general governments of metropolitan jurisdiction. They also point out that most other metropolitan approaches have been rejected or have proved unsatisfactory.

However, the Council of State Governments fails to explain how the county metrogovernment setup would be in any less difficulty in a few years than the present smaller governing units are now. The council admits that a major reorganization of county government structure and processes would be necessary before the county could assume metropolitan government responsibility.

It would seem to us that the use of metropolitan special districts or authorities offer the best solutions to the metropolitan problems which we will continue to face in greater complexity in the future. In many instances metropolitan districts now in operation are the closest thing we have to actual metropolitan governments. It is true they are not yet dealing with all the problems in their area and are generally limited to one or two specific functions such as supplying water or sewage facilities. The many successes of special metropolitan districts or authorities leads us to believe that this system could be highly successful on an expanded basis to include many of the services demanded by residents of metropolitan areas. However, a study of the metropolitan district or authority type of governmental unit suggests the need for more representative control by the units which it serves.

In setting up metropolitan districts or authorities it would seem to us that they would need to be empowered with more than one purpose for two reasons: one, it would keep the number of government units down and two, it would keep each authority from adopting too narrow a view.

I think we should emphasize here that metropolitan units—districts or authorities—must be confined to dealing with special services. For instance a metropolitan park authority would be responsible for planning, maintaining, and envisioning the future park needs of an entire metropolitan area which might encompass several counties. All communities in the area would be represented on the park board and contribute financial support in proportion to the size of their various respective communities. It would not seem farfetched to us, if this park board were to be given the problems of recreation. Police and fire protection might constitute another metropolitan board. Water, sewage, and garbage collection might form the basis of another.

Control of these various metropolitan boards could be in the hands of the people if each community elected its representatives to the board at regular elections. Overall policy decisions would be left to the various governmental units backing up the metropolitan area who would instruct their board representative on how to vote in matters requiring representative policy decisions.

We believe in this way actual democratic representation would be effected while increasing the effectiveness of public services.

It is important to note here again that the creation of metropolitan special districts would not destroy the basic governmental units of a community which require citizen participation and which we believe are so important to the continuance of our democratic government.

Some of the problems which we believe metropolitan districts would be better equipped to deal with are mass transportation, garbage and refuse disposal, flood control, air and water pollution, public health and safety, fire and police protection, water supplies, education, and certainly long-range planning.

In view of the magnitude of these services to meeting megopolis of the future which is already racing over county and State borders, we believe that certain steps must be taken not only by State and local government but by the Federal Government to create enabling legislation, financial support, and awareness of the immediate and the impetus to act.

The Saturday Evening Post article concluded: "Some new forms of government, greater than the city, less than the State,

must be evolved to link city and hostile suburbs together to their mutual benefit."

Therefore we recommend that a "Metropolitan Point 4" plan be established. This plan would first be acted on by the Congress of the United States with legislation creating metropolitan study committees for all communities whose dependent populations had extended beyond their state boundaries. These communities would be made up of representatives of Federal, State and local governments in varying ratios determined by the particular geographic and population sizes, with the majority representation going to the units involved.

The metropolitan point 4 program would supply funds for surveys, recommendations, and long-range planning. The metropolitan point 4 plan would be a continuing program which would costantly seek more efficient ways to supply services and deal with future growth. One of the most glaring deficiencies in local government is its inability to plan ahead under our accelerated population growth. Even those communities which attempted, usually in sporadic fashion, seldom effected coordination with adjoining communities resulting in unorganized confusion. Most communities, other than the largest cities, are unable to bear the cost of comprehensive master planning. Those who have completed master planning, in some instances have had to negotiate with adjoining communities over such long periods that the plan was outdated before it became a reality. We therefore believe that the financial burden should be shared by the Federal, State and local units in establishing and maintaining the metropolitan point 4 planning committees. While we believe this is essentially an interstate problem and involves the responsibility of the Federal Government, we think it is necessary that the greater responsibility rests with the State and local units of government. The decaying core areas of many of our larger cities has resulted in Federal assistance to blighted residential areas. We believe that the decaying business sections must also be given some attention if we are to preserve the city as a cultural institution which has always supported our great libraries, museums, theaters, along with our municipal universities, hospitals, welfare institutions, etc.

Metro point 4 would offer a coordinated plan to rejuvenate the entire core areas of the central metropolitan city in the metro population center. In areas where private capital is unable to meet the challenge of this revitalization program the Federal Government would be asked for assistance. In interstate areas metro point 4 committees would be set up by interstate compacts operating with representatives from each State.

An inportant function of the metro point 4 planning committee would be recommending local, State, and Federal legislation to solve the problems of metropolitan growth for their respective areas. We believe the problems of metropolitan government are very serious. They have gone unrecognized in many areas until only recently and have been dealt with in an expedient manner designed only to correct immediate problems. There has been almost no planning on a preventative basis designed to avoid future problems. We cannot continue to muddle through. Such a course will only compound our present troubles. Therefore we believe this problem must be attacked on a national scale immediately by establishing a separate department of government to avoid chaos from the lack of suburban planning and great areas of our farm land becoming future slums and the extinction of core area city cultural centers.

Flood Control—Blackstone River Basin

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. PHILBIN. Mr. Speaker, with reference to the general flood control project in the Blackstone River Basin in my district, I am informed that Gen. Alden K. Sibley, able and distinguished head of the Boston office of the Corps of Engineers, held recent hearings, March 29, 1960, at Uxbridge, Mass.

The purpose of the hearing was to determine the needs and desires of local interests relative to further measures for flood control and allied purposes in the Blackstone River Basin, in addition to the currently authorized and recommended projects.

I might mention at this time that the latter projects include West Hill Dam and Reservoir now under construction, the Woonsocket local protection project and Worcester diversion tunnel which are essentially completed, the Pawtucket flood wall which is presently in an inactive status, and protection for the lower section of Woonsocket which is currently being considered for authorization by the Congress.

I may also state that these projects and current studies are part of an overall program for the area which was inaugurated after the catastrophic 1955 floods, the basic projects of which have already been completed, or are under construction.

The additional projects projected at the hearing, and contemplated by those of us who have been interested in the completion of flood control for this area, include additional work protection projects, clearing, widening, and deepening the Blackstone River in several localities, and construction of additional reservoirs.

Channel improvement projects were suggested for the Blackstone River from the Rice City Dam in Uxbridge to the Rhode Island State line, the Rockdale and Riverdale sections of Northbridge, the Skull Rock Bridge area in Uxbridge, and in the vicinity of the drive-in theater in Lonsdale, R.I.

Suggestions and proposals also included installation of crest gates at the Rice City Dam in Uxbridge and the Kupfer Bros. Dam in Northbridge, enlargement of the storage capacity behind the Kupfer Bros. Dam and construction of a floodwall to protect the mill at that point.

Increased bridge capacity at Millville Road and Mendon Street in Uxbridge was also recommended. Additional flood control reservoirs in the Mumford River and tributary brooks in Uxbridge and Douglas were also requested.

In my capacity as chairman of the Massachusetts Delegation Subcommittee on Flood Control and Protection established after the 1955 floods, I have given most careful attention to the overall program and proposed new projects which, we hope, will, in effect, provide necessary safeguards against future floods.

In that connection, General Sibley of the Engineers has given extended and most effective attention to all these problems, and has assured me that the suggestions for additional improvements will be given careful consideration in his report on the Blackstone River which is scheduled for completion this year.

I may state again, as I have done so many times before, that without the cooperation and invaluable aid of the Army Engineers these tremendously vital projects could not have been completed in such a timely and effective manner, and I am privileged indeed to extend once more, in behalf of my constituency, as well as other people in our State and area, and I am sure for the Massachusetts delegation, our profound gratitude.

Certainly an overriding factor in the completion of the general flood control program in the area has been the consideration and timely assistance rendered by the House Appropriations Committee, as well as its counterpart in the other body, and I am proud indeed that the Members of the House and the Congress have expressed their confidence in the overall program and have given us assistance and unwavering support, thus making possible the great progress that has been made in protecting our State and neighboring States from the ravages of flood waters that periodically visit the area.

It is my hope and expectation that, with continuing cooperation by all of the agencies and officials concerned at local, State, and Federal levels, we will continue to make substantial headway toward maximum protection for the entire area, and that is surely an end which will not only have the wholehearted approval of our people, but will be very deeply appreciated by them.

Mutual Security Act of 1960

SPEECH

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, I would like to make three observations about the Hardy-Carnahan amendment we are about to vote on. First, the prohibition on advance allocations, reservations, earmarks, commitments, or set-asides by the Fund definitely applies to any formal action by the Fund's Board of Directors which would either bind the Fund or

constitute a basis for representing to the Congress that a given sum cannot be used for other purposes. It does not mean that the Fund's staff cannot, or should not as prudent bankers, informally discuss priorities of various proposals with prospective borrowers, or internally prepare work programs and give special attention to applications from key countries. It should be noted here that just last year the Congress directed in Section 202(b) of the act that the Fund "in its operations shall recognize that development loan assistance will be most effective in those countries which show a responsiveness to the vital long-term economic, political, and social concerns of their people, demonstrate a clear willingness to take effective self-help measures—." Obviously assistance to projects and programs in such countries are to be given priority.

Secondly, the amendment clearly calls for such data on the various types of projects and programs which the Fund finances as is appropriate to a preliminary judgment on the particular project or program.

Thirdly, the amendment does not constitute a limitation on the types of projects and programs which the Fund may finance although the data that the Fund will require on these will vary, depending on the Fund's share in the total financing and the existence of reasonably reliable evaluations that may already have been made.

I think it is important that the record be clear on these points. The amendment's purpose is not to put the DLF in a straitjacket, but to make sure that commitments are not made for projects before they have been studied sufficiently to insure that loans made for them will in fact be in accordance with the purposes of the DLF and reasonably certain of accomplishing its declared objectives.

"Attracting Industry Southward": Remarks of Hon. W. Cooper Green at Princeton University Conference

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. HUDDLESTON. Mr. Speaker, one of the outstanding men of the South today is the Honorable W. Cooper Green, former mayor of Birmingham and currently executive vice president of the Alabama Power Co., whose headquarters are in my district. He is a man thoroughly acquainted with every aspect of our region's social and economic life and thus when he speaks on the subject his words are well worth our closest attention. Recently, Mr. Green addressed a conference at Princeton University on the industrial development of the South. His speech, "Attracting Industry Southward," is one of the finest I have ever read, and I am pleased to bring it to the attention of the Members of this body:

ATTRACTING INDUSTRY SOUTHWARD

(Remarks of W. Cooper Green, executive vice president of Alabama Power Co., Birmingham, Ala., Princeton University Conference, Princeton, N.J., April 13–14, 1960)

I am honored and proud to be here as a visitor, and appreciate the privilege of speaking to you regarding my beloved southland. Gentlemen, I am not going to philosophize with you, endeavor to be a statistician and bore you with figures, or make comparisons in my talke to you on industrial development of the South. Anyone can philosophize, depending on his theories or beliefs—everyone has access to figures, and can prove or disprove a number of things depending on his point of view—and comparisons can be offensive depending on which good side of the track you were born. I am simply going to talk about what I know best—industrial development in the South, what has taken place, why, and the reason this industrial revolution will continue in our area.

Industrial development in my State and the South is big business, and a most competitive one. Throughout our Nation it has been estimated we now have 7,000 people full time in this field of endeavor. There is naturally a nationwide scramble to grab off the proposed plants of new and expanding industries producing new and improved products. This is especially true in the South where community is bidding against community, State against State. But never has there been so much teamwork among local business interests, teamwork within the States, local improvements, innovations, and minds at work devising new ways to attract this business.

Certainly this effort is a major occupation with all chambers of commerce, State governments, railroads, banks, southern utilities, and other organizations. Our area is showing again the competitive spirit which is the hallmark of America's progress.

Much has been written about the various methods and procedures used by industrial development organizations to attract industry to the South. There are no secrets unless they be research, hard work, teamwork, persistence and patience. None of us are responsible for the raw materials and other resources with which God endowed the South. A lot of our industry is just coming home where it always belonged. It is natural that textiles should be close to their source of supply—cotton, and the chemical industry that supplies basic materials for synthetics. Likewise, the woodpulp and paper industry belongs to the South, the area with the fastest growing timberlands in America. The chemical industry is just taking advantage of the natural mineral resources that have been there all along. When a region has 56 percent of all minerals produced in the United States, 33 percent of the forests, 70 percent of the Nation's petroleum, 80 percent of the natural gas, 22 percent of all coal, 75 percent of the graphite, 40 percent of the phosphate, 100 percent of the bauxite, and 61 percent of the Nation's navigable waterways, it is only logical for industry to move in that direction.

This movement to the South is one that was inevitable because of the richness of the region and its undeveloped potential. What organizations such as ours have done is to help uncover this potential and present our resources in a factual way to industry that could turn them into profits for itself, and at the same time give jobs to our people who would in turn enjoy a better way of life.

Because of this new payroll money and the population explosion, a great market has developed that calls for new industries to supply it. The South has at last entered a regenerative phase of the industrial cycle—the phase that feeds on itself and grows out of its own demands and supplies.

The southern industrial revolution is a continuing dynamic upsurge because its leadership is convinced that apparently there are no visible limits to the variety or volume of human consumption; and the capacity of man to enjoy the fruits of his labors recognizes no boundaries. New processes, new techniques, new designs for plants, the ingenious use of raw materials and supplies of power and water * * * these are the demands of modern industry, and they are being met promptly and adequately in the South.

Over 2 million jobs in the South have been created in the years since World War II. This growth, this productive activity in the southeastern section of America, is an irresistible, undeniable fact; it is like an ever-rising tide which no one, even if he wanted to, can stem or turn back. The Deep South is truly living through an unheaval more profound in many ways than the secession, but one that is basic and enduring, rather than emotional.

You might ask, who are some of the manufacturers who have benefited recently from the utilization of raw materials that have been waiting for centuries to be put to work?

For example, five new chemical plants along the Mobile River in Alabama owe their existence to a University of Alabama professor, Dr. Stewart J. Lloyd, who several years ago discovered a large salt dome a few miles north of Mobile while conducting a natural resources survey. Olin Mathieson built a huge chlorine and caustic soda plant to supply the fast-growing paper mill industry and other manufacturers of the southern area, using the salt as raw material. Then Geigy Chemical & Calabama Chemical Co., because of an assured chlorine supply, built insecticide plants to supply agricultural areas in the Southeast. Courtauld's Ltd. of England constructed a multimillion dollar viscose rayon plant in the area because Mathieson could supply the caustic soda necessary for production of rayon. Then Courtauld's also needed carbon bisulfide, and Stauffer Chemical erected a new plant nearby to supply it. All this because of raw material that, up to 1950, we didn't even know we had.

Alabama Metallurgical Corp., a joint venture between Calumet & Hecla Co. of Chicago and the Brooks & Perkins firm of Detroit, recently went into production of primary magnesium, and became the second producer in this country because of a dolomitic ore in Alabama that had the right chemical analysis. Formerly this ore had been used as a fertilizer, aggregate for roads, and for lining furnaces in the Birmingham steel industry. Incidentally, this plan came into being because of a chance meeting of two men vacationing in Key West, Fla., Mr. T. W. Martin, chairman of our board, and Mr. E. Howard Perkins, chairman and president of Brooks & Perkins. Mr. Perkins told Mr. Martin of his dream to build a magnesium plant based on dolomite as the raw material, and Mr. Martin asked him to let our department conduct a study to see if Alabama could meet his requirements. Mr. Perkins agreed and wrote us a three-page memorandum listing his specifications, asking if we could meet his rather difficult and critical needs. I am happy to report that after 2½ years of extensive geological and feasibility studies covering every aspect of the proposed operation, the plant was located at Selma, Ala. From this story you can understand we get our prospects in many different ways and sources.

In the papermaking industry, Coosa River Newsprint Container Corp. of America, Marathon Paper (now owned by American Can Corp.), International Paper Co., Scott Paper Co., and Gulf States Paper Corp., have taken advantage of our extensive timber and water resources in our State. These plants and others make up a total of 80 pulp and paper mills in the South today

and they supply 40 percent of all paper sold in this country. Our area is the largest producer of chemical woodpulp in the world.

Another example is a fine company, F. C. Huyck & Sons, who built a multimillion-dollar "felt" plant to supply this growing papermaking industry. They are using our navigable rivers to bring in wool from Australia.

Alabama alone has 1,600 miles of navigable waterways, and over 531 square miles of inland water area. The South, with the largest water resources in the Nation, is using only 4 percent of its available water supplies while the rest of the country is using 18 percent.

Then there are names like Reichhold, Goodrich, Goodyear, Borden, Minnesota Mining & Manufacturing, National Gypsum, Westinghouse, General Electric, Chemstrand, and many others who are taking advantage of materials, manpower and market in the South.

All the foregoing have located in our State. Other Southern States have shown a similar growth, so you can well imagine the great industrialization that has taken place. Since the end of World War II, the General Electric and Westinghouse companies have established at least 20 new plants in the South, employing from 20,000 to 30,000 workers turning out products ranging from electronic tubes, fluorescent lamps and electric blankets, to large transformers and major appliances. The DuPont Co. has invested several hundred million dollars in more than half a dozen new southern chemical plants. Ford Motor Co. has four auto assembly plants in the South. Since 1946 Western Electric built three plants in North Carolina that employ about 10,000 people. The aluminum industry is largely concentrated in the South where it has nine primary producing plants.

The work of our department and others in the South is based on presenting to manufacturers the factors that we call the 3 M's—"materials," "manpower," and "markets." I have spoken at length on our raw materials. As regards manpower for construction, operation and maintenance, adequate and productive labor is essential. Actually our labor poci has only been tapped in the last 15 years. An evidence of our labor supply is that we are not only providing labor for our own industrial expansion, but we are contributing substantially to the labor supply of other regions.

The southern industrial plant has an advantage of being located at the source of an assured labor supply. Not only is there no recruitment expense to speak of, but there is a wider opportunity for selecting better quality workers. In times of labor shortages it is easier to retain an experienced labor force. Even when a plant is shut down, key workers do not readily drift away, and many of them have small farms which provide income to tide them over.

Our labor is not cheap, unless you call it cheap production-wise, and this is true because it is healthy and independent in spirit. Since World War II, good and plentiful labor has been a lodestone that has attracted industry, and there are no signs that show any lack of magnetism in our day.

For example, one Alabama plant which had only 700 jobs reported an active file of 9,000 applicants, and one with 2,000 unskilled positions has over 15,000 active applications.

Although a lot of firms were initially uncertain and skeptical about southern labor, their almost unanimous conclusion (from their own experience) has been an enthusiastic endorsement of the quality, quantity, and performance of southern labor. They have found a better selection of workers who are easy to train, have high productivity because of their cooperative attitudes, low rates of turnover and absenteeism, and in most instances good labor relations. Let me quote a former manager of General Electric's electronic plant in Anniston, Ala.: "We are proud of the intelligent and interested men and women who have joined our organization. We are deeply satisfied that it has been possible to offer supervisory opportunity to so many young people in the area—an opportunity to develop real careers in the rapidly expanding field of electronics."

How has our market developed, and what have been the results of this market? Primarily the original influx of industry was based on raw materials. The payroll generated by these plants gradually raised our standard of living. There was more money to spend and our people wanted more of the necessities along with some of the luxuries of life. As a result there was a demand for more goods, more services, and so industry came to furnish this demand. This new money generated by additional employment is why a large number of the new factories in the South have been built to fulfill the needs of our people.

The gap is fast closing between the South and the Nation in per capita income because of this rapid and amazing growth. In the 1939–58 period the Southeast had an increase of 361 percent as compared to the national average of 270 percent. My State had a 444 percent growth in income during those same years.

I am sure you will agree that there is hardly a more accurate barometer of commerce and industry and the standard of living than electric power consumption. In 1947–58 period the Southeast showed an increase of 194 percent, as compared to 115 percent for the country as a whole. The growth of our own company has paralleled the rapid economic and industrial development of its service area. To assure an adequate and economic power supply for the future growth that we believe is certain, our company is engaged in the largest expansion program of its history and this faith is shared in like manner by other southern utilities. The company that I work for is in the initial stage of a 10-year program that will double its facilities. In 10 years we expect as much growth as was experienced in the 40 preceding years.

One other thing I would like to mention in passing; some would classify the friendliness and cooperative spirit on the part of existing industries, community leaders and citizens as an intangible factor, but let me assure you that it is most tangible and has played a great role in our industrial efforts. One of the basic desires of men and industry is to be wanted, and manufacturers have found that they are sincerely appreciated in the South.

Several years ago a prominent New York executive seeking a southern location for his company had this to say: "A warm feeling of welcome from citizens and from State and local officials was given us wherever we went, and we have learned that this welcome does not wear off."

I can assure all of you that our governmental climate, at all levels, is a healthy one, and the highest type of cooperation exists between government and business. A favorable tax structure has been created, and maintained, that makes the South an ideal location.

What will be the South's industrial future is like trying to answer "what is electricity?" We know what it has done and can do, but what it will do, given the opportunity, is anybody's guess. The South is still a land of unrealized and unlimited opportunities, waiting for the initiative and courage of man to develop it. But we do know its development is assured because it is based upon the region's raw material, abundance of good and productive labor, excellent transportation facilities, a promising amrket for goods and services of all types, based on a higher purchasing ability, and the wonderful enthusiasm of its people.

Our success is not measured by any idle boasting, nor any utopian dream, but by facts, tangible facts such as industries now prospering in our area. Industrially and economically, there is no longer any basic difference between the South and the rest of the Nation, unless it is that the South is rapidly catching up. There is no iron curtain between the North and South to block off the sound of the industrial growth that is going on below the Mason-Dixon line. The sound is one that has grown steadily for the last 15 years with no indication of hands growing tired that beat the drums. For all those who have eyes to see and ears to hear, there is no doubt that the South has literally lifted herself by her own bootstraps. For a land that was destitute after the War Between the States, without money, without industrial know-how, without time to do anything except worry about the necessities, without any lend-lease or Marshall plan to put it back on its feet, the South has shown a phenomenal growth. As one man from Georgia recently put it, "A lot of things have been happening down here since General Sherman's soldiers got careless with matches back in 1864."

Thousands of words have been written and spoken about attracting industry southward. There is a certain amount of frustration in describing fully the methods, procedures and results because of the time allotted and the many facets involved. I do hope that my words have given you some indication of what we have done, are trying to do, and why we believe the South is the new industrial frontier offering unrealized profits to those who will come and grow with us.

In conclusion, I would like to leave you with a saying often used in my part of the country. It is this: "The last half of the 20th century belongs to the South."

We Dare Not Dawdle

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Belleville News-Democrat of Thursday, April 21, 1960, entitled "We Dare Not Dawdle":

WE DARE NOT DAWDLE

The alarming degree of national defense unreadiness was forcefully reiterated by Lt. Gen. William H. Tunner, commanding the Military Air Transport Service, in testimony yesterday before a House Armed Services Subcommittee.

The disturbing truth is that MATS, which is depended upon to provide our Nation's strategic military airlift, can't deliver the goods. It has the will, high skill, and everything else it takes—except the necessary tools to do the job.

Hamstrung by the Air Force in the competition for defense dollars and bled by politicking commercial aviation lobbies which covet all airlift as their private province, MATS has been shamefully deteriorated. "The present (MATS) force is 90 percent obsolete and cannot meet the time

limitation established for airlift of Army forces," General Tunner said in supporting his plea for immediate modernization of MATS.

Of course, he wasn't telling the House group anything they hadn't already found out during a month of intensive probing of military airlift adequacy. Our own Congressman MELVIN PRICE is a member of this diligent subcommittee, which has determined that although MATS has a top priority job to perform, it is precariously poised on the bottom rung of the national defense ladder.

Announcing tentative conclusions, Chairman L. MENDEL RIVERS described MATS as "the outstanding orphan of the Military Establishment," and suggested that it be reorganized as a separate command directly under the Joint Chiefs of Staff, or else have its mission determined by statute.

This conviction affords insight into the high caliber of this penetrating and, in fact, long overdue investigation.

Most of all, though, the Rivers probe underscores the urgent necessity for immediate action to rescue and rejuvenate MATS. It is imperative that Congress act on this matter in this session. Continued dawdling imperils our national security.

Law Day

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. MACDONALD. Mr. Speaker, as chairman of the Capitol Hill unit, Federal Bar Association, I wish to take this opportunity to congratulate the American Bar Association and other law associations on their efforts on behalf of the national observance of Law Day, U.S.A, on May 1, 1960.

It is certainly fitting and proper that this day be specially set aside to commemorate our great heritage of liberty, justice and equality under the law. We must always remember that while ours is a Government of, by, and for the people, it is a Government of laws, not of men. It seems to me that we lawyers on Capitol Hill have a special obligation, and that is to make our system of laws even more efficient. We should also rededicate ourselves to uphold the law in our service to this Nation and its citizens. I, therefore, call upon all the members of the Capitol Hill unit, Federal Bar Association, to take particular note of this day and to join wholeheartedly in its observance.

I also urge all citizens of our Nation to take advantage of this occasion to further their knowledge of the great benefits they are receiving under our American law.

In this regard, I wish to bring to the attention of my colleagues a statement on the importance of Law Day, U.S.A. written by Mr. C. F. Brickfield, counsel of the House Judiciary Committee and a member of the Council of the Capitol Hill unit, Federal Bar Association. Mr. Brickfield's statement merits the attention of not only every Member of Congress but every person in America who is concerned with the formulation, administration, and enforcement of the laws of this Nation.

The statement follows:

LAW DAY—CAPITOL HILL UNIT, FEDERAL BAR ASSOCIATION

May 1 is celebrated across the Nation as Law Day, U.S.A. The purpose of this observance is (a) to strengthen the Nation's dedication to the rule of law as the foundation of our free society and (b) to freshen every American citizen's awareness of the rights and privileges he enjoys by reason of our system of law.

For the last 3 years, the Federal Bar Association has joined in the responsibility of helping to commemorate Law Day. Throughout the country chapters of the Federal bar have joined with the Federal and State judiciaries in remembering, through appropriate exercises, that our Nation's basic strength lies in the laws which protect the rights of its citizens.

The Federal bar has also joined with the Immigration and Naturalization Service in having prominent members of its bar address newly sworn citizens, impressing upon them the great benefits which our rule of law guarantees. In addition, because of its close relationship with Government lawyers, the Federal Bar Association has secured the aid of the general counsel of many of our Federal agencies who, in turn, have caused to be inserted in the bulletin for the month of each agency a description of what Law Day is and means.

Last year these activities of the Federal bar were carried out not only in the United States but in other parts of the world as well. In France, for example, the Paris chapter made special arrangements and held appropriate ceremonies in schools in the cities of Paris, Orleans, Poitiers, Verdun, and Chateauroux.

Happily, the Capitol Hill unit of the Federal Bar Association came into existence this year and has taken its place as a full-fledged unit of the Federal Bar Association. As such, it enjoys not only the benefits the Federal bar has to confer upon it, but also, and I might say properly so, the obligations which the Federal bar imposes upon it as a responsible member of its organization.

The Capitol Hill unit is therefore happy, as one of its first duties, to join with the other chapters and units in commemorating Law Day and, for its part, to remind lawyer-legislators on Capitol Hill of their role and responsibilities with regard to the rule of law.

One may wonder what is the relation of the individual lawyer to the great creature called the law and, more especially, what is the relation of the lawyer in the legislative branch of the Government to the enactment of legislation which becomes the supreme law of the land. Putting first things first, it is necessary always to be mindful of one of the prime tenets of our form of government—the dignity of the individual. The rights and privileges of each person in our great land are first and foremost. All of our instruments of government are created to secure those rights and are subordinate to those rights.

These rights are preserved and protected in the first instance through the laws of our Federal Government and of our States. The laws are enacted by lawmakers who are the elected representatives of the individuals whose rights are to be protected. These lawmakers are aided in this tremendous responsibility by persons trained in the precepts of lawmaking. These precepts include, of course, a knowledge of bill drafting and a knowledge of parliamentary procedure. But such knowledge is in essence concerned with procedures only. Just as important is the need for a thorough background in the substantive law which affects the rights and privileges of the individual. Without a thorough knowledge of the fundamental instruments of our Government, such as the U.S. Constitution, Federal Statutes, treaties, and without a proper training in the jurisprudence under the natural law as to what is right and just, no lawyer, especially a lawmaker, can adequately serve or adequately do the job of preserving and enhancing the dignity of the individual.

A lawyer, as a general practitioner, is, in lerge part, a businessman. He deals with businessmen and with other lawyers in a business way. In the final analysis only a small part of his total business and working hours are taken up with the drawing of legal papers and the researching of legal questions in law books.

The lawyer, as an elected representative, is essentially a political figure dealing in the policies of Government. Little of his time is devoted to bill drafting or parliamentary procedure. While it is true that he should be proficient in these subjects, nonetheless, like the general practitioner, he spends the greater part of his working day dealing with problems affecting human relations. The legislator consults with others to find out how better to increase the manifold benefits which the individual today enjoys; he seeks out abuses which exist and discusses with others, ways of eliminating such abuses. And the lawyer-assistant who help the legislator acts in much the same way for the problems of the legislator are in substantial part the problems of the assistant.

Without the basic understanding and acceptance of what is right and good, as those concepts are outlined and understood in our fundamental instruments, no lawmaker can adequately fulfill his role. So in this Law Day, when the Communist world is glorifying the supremacy of the State and the iron rule of the state, it would be well for us of the Capitol Hill Unit to remember our responsibilities as lawyers in the legislative branch of the Government and to renew our determination to strive to develop better the laws of our land so that they will remain a bulwark against totalitarian and Communist ideologies by holding preeminent the rights and dignity of individuals.

It Is Red China, Not the United States of America, Which Continues To Block Admission of American Newsmen

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release issued by the State Department on April 20, 1960. It is strange how many still believe it is our State Department that prevents American reporters from carrying on their work in Communist China:

A year ago the Department of State, in announcing (Press Release No. 281 dated April 23, 1959) the extension of the validation of passports of American correspondents to travel to Communist China, stated:

"The Department has repeatedly made it clear that if any bona fide Chinese Communist newspaperman should apply for a visa, the Secretary of State is prepared to consider recommending to the Attorney General a waiver under the law so that a visa

could be granted. Not one Chinese Communist correspondent has yet filed an application. American law does not permit the Department to do what the Chinese Communists demand, which is to agree in advance to admit an equal number of Chinese Communists, even before their identities are known to us. If the Chinese Communists were indeed interested in reciprocity, they would have an equal number of Chinese newsmen apply for visas."

In the year that has passed the Department:

1. Added 2 more to the list of the 30 American news organizations authorized to send one representative each to Communist China, bringing the total to 32.

2. Removed from the validation the reference to the Communist controlled portions of China, which reference several American newsmen had indicated might militate against their receiving a visa to enter Communist China. These passports now have no time limitation other than the periods for which they are normally valid. In the same year, despite U.S. initiatives:

(a) The Chinese Communists have not granted a single visa to an American correspondent to enter Communist China;

(b) Not a single Communist Chinese correspondent has filed an application for an American visa to enter the United States;

(c) The Chinese Communists have continued to insist that, if there is to be travel of newsmen to each other's countries, an agreement must be announced for this purpose. This agreement must promise "equal and reciprocal treatment."

It should be noted that the United States has never had such an agreement with any other country. Nor has the Peiping regime apparently found it necessary to conclude such an agreement, even with those countries where it has no diplomatic relations and where journalists of its official New China News Agency operate, i.e., France and Cuba. It is obvious that Peiping is seeking to use the issue of news representatives in an effort to force the United States into a formal agreement to improve the prestige of the Chinese Communist regime.

The U.S. position is simply that ample provisions already exist under the law to permit the "equal and reciprocal" travel of newsmen to each country. The fact that the Peiping regime has not yet allowed any of their journalists to apply for a U.S. visa casts substantial doubt on their professed concern for reciprocity. In July 1959 one American news representative was refused a visa on the grounds that it was "not convenient at this time". It is also known that the requests of several reputable free world journalists other than American have been either turned down or ignored in recent months. Therefore, on the basis of the situation as of today, the Department of State is obliged to conclude that Communist China, despite its statements, has no serious interest at this time in either the travel of its own newsmen to the United States or the travel of American newsmen to the China mainland. The representatives of this Government will, however, continue to press for a satisfactory solution to this problem with representatives of the Peiping regime whenever the occasion presents itself.

The 32 American news organizations, accredited by the Department on the basis of the established criteria, announced on August 22, 1957, namely that they had demonstrated sufficient interest in foreign news coverage to maintain at least 1 full-time American correspondent overseas, and that they wished to be represented in Communist China for 6 months or longer, are the following:

American Broadcasting Co., American Universities Field Service, Associated Press, Chicago Daily News, Chicago Tribune, Christian Science Monitor, Columbia Broadcasting System, Copley Press, Inc., Cowles Magazines, Inc., Denver Post, Encyclopedia Britannica, Fairchild Publications, McGraw-Hill, Minneapolis Star and Tribune, Mutual Broadcasting System, National Broadcasting Co., National Geographic magazine, Newspaper Enterprise Association Service, Inc., New York Herald Tribune, New York Times, Newsweek, North American Newspaper Alliance, Reader's Digest, St. Louis Post-Dispatch, Saturday Evening Post, Scripps-Howard Newspapers, The Sun (Baltimore), Time Inc., United Press International, U.S. News & World Report, Wall Street Journal, and Westinghouse Broadcasting Co., Inc.

Reciprocal Trade Standards

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein an article from the November 8, 1959, edition of the Japan Times, published in Tokyo, entitled "Cottage Industries."

I hope that every Member of the House will read this revealing editorial and then inquire how American industry can possibly compete with foreign labor receiving $2.80 per month. I recognize that the national wage level in Japan is somewhat above that level, but nevertheless it is unquestionably low in comparison with our own high wage rates here.

We all want friendly relations with Japan and other nations of the free world, and all nations of good will, but it is clear that we can no longer afford to allow foreign goods produced at a mere fraction of the cost of production in our own country to flow into this Nation in large volumes, attacking our markets, undermining our wage standards and our conditions of work, and posing serious threats to the survival of a great many American industries.

This situation is getting worse every day, and I urge once more that Congress do something about it, before it is too late.

These cheap goods and materials of many kinds are flooding the American markets, and other markets of the world, so that high-priced American products cannot compete with them.

We will either find some way to regulate this cutthroat trade or we will face an economic debacle.

The article follows:

COTTAGE INDUSTRIES

A part-time worker doing contract labor for a rubber footwear company died in Tokyo the other day of benzol poisoning. The tragic death pinpointed anew the need for a cottage industry labor law.

This is not the first time that a debate has risen over legislation to protect workers in cottage industries. Poverty and unemployment have combined to drive a large number of people into badly crowded living conditions today and a large percentage of them have turned to accepting piecework in their ramshackle homes under contract to small industrial plants.

The law does not protect them, and the government has done little for them.

A labor ministry survey states that 330,000 families throughout the country are employed in bare subsistence work in cottage industries. This is not a small number by any means.

Moreover, even in families fortunate enough to work more than 6 hours a day, the monthly income comes to around 1,000 yen, give or take a little, according to the survey. How any family could survive on this sum—equal to $2.80—is a miracle. The word tragic does not even begin to describe the lot of these unfortunates.

At the root of this evil is the fact that the national labor law does not extend its protection to the workers in cottage industries. And the labor standards law does not apply.

Because of this, workers in cottage industries have no legal protection against accidents. They are not eligible to receive compensation, and they have no guarantee of minimum piecework rates.

The business firm which places the order with each cottage unit dictates the rates. It makes them or breaks them, and there is nothing the workers can do about them. And the longer the term of the contract, the worse these conditions are.

Without protection from the law, cottage industry workers have only two choices—to demand better working conditions and face the certainty of not eating tomorrow or to swallow their conditions silently and at least assure themselves of a little food in their rice bowl.

There is a minimum wage law. But it is applied only when there is danger that rate agreements between contractors would not be observed and small industrial plants would be placed at a competitive disadvantage. In effect, the minimum wage law has been protecting the businessmen, not the workers, in the cottage industries at least.

Piece rates for work farmed out to cottage industry units today are so low as to defy commonsense. That is why an effective cottage industry labor law is needed today.

Such legislation should include a minimum wage law with teeth in it, protection of end-contractors and their workers from unilateral cancellation, and rigid safety provisions for the workers.

Only by such means can we help the tragic people working in cottage industries and prevent further mishaps such as deaths from benzol poisoning.

TWUA Favors Enactment of S. 722

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. William Pollock, general president, Textile Workers Union of America:

TEXTILE WORKERS UNION OF AMERICA,
New York, N.Y., April 26, 1960.

DEAR MR. REPRESENTATIVE: We urge your immediate help in getting the proposed legislation for area redevelopment (S. 722) onto the floor of the House and we urge you to support such legislation.

You know well the plight of the textile workers who have been left stranded by mill closings in all parts of the country. Publicly announced mill liquidations are estimated to exceed 800 for plants employing over 220,000 people. Further shutdowns are likely to occur. These are reported in all parts of the country. Moreover, technological change has reduced employment so that there has been a net contraction in employment of over 400,000 production workers in the past decade.

Unfortunately, these mills have been located in communities where there were few alternative employments. Some of these towns and cities have tried valiantly to attract new employments. Some have been moderately successful but the overwhelming number of these areas remain distressed and have suffered this plight for many years.

The basic reasons for their difficulties is that the communities and facilities have to be modernized and redeveloped in order to make them attractive for the newer types of employment arising in many other areas. The distressed communities have been unable to finance these improvements and have not had the local resources and, in some instances, the leadership necessary for this gigantic undertaking. They have need of a helping hand to guide them in their programs and financial aid to initiate the renewal of their facilities and construction of the needed additional ones. Many communities must erect pilot industrial or commercial establishments to provide evidence to our economic leaders of their determination to reconstruct their economies.

The proposed area redevelopment legislation will provide this help to the hundreds of communities which need technical and financial aid.

We urge your endorsement and active support. This is the time when your help will count most.

Sincerely yours,

WILLIAM POLLOCK,
General President.

Another Incredible U.S. Supreme Court Decision

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial which appeared in the St. Louis Globe-Democrat on Wednesday, April 20, 1960, as follows:

ANOTHER INCREDIBLE DECISION

The decision of the Supreme Court, by a 5-to-4 vote, allowing a railroad union freedom to strike to enforce demands for a voice in management, is another milestone in an incredible series of decisions of the current High Tribunal.

The Order of Railroad Telegraphers in this case maintained that the Chicago & North Western Railroad must secure its approval before severing hundreds of surplus employees from the payroll.

These employees, mainly local agents along branch lines, worked as little as 12 minutes a day in their one-man stations, with a daily working average of 59 minutes. Pay for some ran as high as $300 per hour.

The railroad, in dire financial straits, sought to consolidate these offices under a central agency plan. The union threatened to strike to enforce retaining them and the railroad applied for an injunction.

The Supreme Court decision states that the railroad must secure the approval of the union and that the union can strike.

This decision vitiates the Norris-LaGuardia Act which, although it forbids courts to enjoin strikes in labor disputes, does not prevent Federal courts from issuing injunctions barring "unlawful conduct or strikes to force acceptance of unlawful demands." Thus, in effect, the demand of the union for a voice in managemet is a lawful one, according to the majority of the present Supreme Court.

The railroad did not invoke the Railway Labor Act in the belief that a demand for a voice in management was not within the realm of collective bargaining.

Under this astonishing decision, railroad unions can insist on the rights of management and enforce them by a strike, notwithstanding orderly provisions of law to avoid railroad strikes.

The Supreme Court decision tortures the interpretation of law. The only light we see is that the decision may make the railroad business so chaotic that the various unions which have steadfastly resisted all attempts to eliminate featherbedding and made work will finally, as a last desperate measure if anything is to be saved in their industry, agree to some orderly procedure for working out the problems which are strangling the railroads and costing the jobs of railroad workers.

How can any union in good conscience insist that an unnecessary job be maintained and paid at rates as high as $300 an hour?

For that matter, what justice is there in insisting on the retention of jobs which have been eliminated by technological improvements or by insisting that a workday consists of traveling 100 miles, just as it did in the 1880's when that was the distance generally traveled in an 8-hour day by wood-burning locomotives and hence the yardstick of a day's work?

Elimination of featherbedding and made work is certainly not antiunion nor is it promanagement. It is, rather, the only way in which the present disastrous trend in railroad employment can be checked and reversed—a trend which has seen a million jobs on the railroads vanish in the past two decades.

The unions have just as great a stake in the solution of this problem as the railroads themselves or the public. Eventually there will be no railroad unions if there are no railroads. Every time a train is taken off a run because it is unprofitable, that many more engineers, firemen, conductors, brakemen, telegraphers, pullman porters, and all others connected with that train lose their jobs.

How vastly much better it would be if the union, instead of sticking to an insistence on an outmoded system of operation, which demonstrably has been depriving them of thousands upon thousands of jobs every year, would work with management toward a solution of these problems.

In the end, there might well be more and better paying jobs, based on realistic standards of work, instead of $3 an hour for a telegrapher who probably doesn't take in that much money for his employer in a month's time.

The Supreme Court majority, consisting of Chief Justice Warren and Justices Brennan, Black, Douglas, and Harlan, has rendered a body blow to stable management-labor relations.

The resounding dissents of Justices Whittaker, Clark, Frankfurter, and Stewart, protesting the decision, may light the way to a stronger Court in the future.

As a sidelight, one of the greatest mistakes of President Eisenhower may well be his appointment of Chief Justice Warren and Justice Brennan to the Court. These two, more than any others, have consistently found themselves on the side of those who oppose strengthening the Nation, whether it be by intelligent bargaining in labor-management relations or, in an entirely different field, protecting the Nation from the Communist conspiracy.

Birmingham Commissioners Demand Retraction of New York Times

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I am inserting in the RECORD an article from the New York Times of Wednesday, April 27, 1960. The article includes the text of the Birmingham city commissioners' letter to the Times and relates to their plan to bring suit against the Times because of the libelous nature of two articles about the city of Birmingham penned by Times reporter, Harrison Salisbury. In addition to the commissioners' statement, the article also includes the comments thereon by Mr. Turner Catledge, managing editor of the Times.

I would especially like to call to the attention of the Members of the House the last two paragraphs of Mr. Catledge's statement:

The two articles about Birmingham constituted a story of the tension that our reporter concluded exists there. We recognize that the articles did not stress the obvious fact that an overwhelming percentage of the citizens of that city lead happy and peaceful lives in a growing and prosperous community. Nor did the article stress the equally obvious fact that this substantial element of the citizenry deplores any lawlessness that may exist in their city and is working in its own way to correct and reduce such tensions as exist.

Should further investigation by the Times indicate that any statement in the Salisbury articles is incorrect or inaccurate in any respect the Times will publish an appropriate correction.

It is interesting that the Times now concedes, as Mr. Catledge's statement strongly indicates is the case, that only one side of the Birmingham story was presented. Also, it would appear from his mention of "further investigation by the Times," Mr. Catledge even feels that one side of the story was not presented accurately.

We shall await further action by the Times to right the great wrong they have done a fine community and its elected officials.

The article follows:

THREE IN BIRMINGHAM ASK A RETRACTION—CITY OFFICIALS DEMAND ACTION BY THE TIMES ON ARTICLE—EDITOR ISSUES REPLY

The New York Times has received letters from the three city commissioners of Birmingham, Ala., demanding that it "publicly

retract as a whole" an article about race relations in their city published on April 12.

Identical letters were sent by Mayor James W. Morgan; Eugene Connor, commissioner of public safety, and J. T. Waggoner, commissioner of public improvements. Copies were addressed both to the Times and to Harrison E. Salisbury, the reporter who wrote the article.

A statement on the letters has been issued by Turner Catledge, managing editor of the Times.

COMMISSIONER'S LETTER

The text of the identical letters by the commissioners follows:

The undersigned member of the city commission, the governing body of the city of Birmingham, acting under section 914, title 7, Code of Alabama of 1940, hereby respectfully demands that you publicly retract as a whole the article defamatory of him published under the heading "Fear and Hatred Grip Birmingham" in the April 12, 1960, issue of the New York Times.

The undersigned member of the city commission, the governing body of the city of Birmingham, acting under section 914, title 7, Code of Alabama of 1940, hereby respectfully demands that you publicly retract the matter defamatory of him contained in the article entitled "Fear and Hatred Grip Birmingham" appearing in the April 12, 1960, issue of the New York Times, and particularly the false inference and insinuation that the undersigned has encouraged or condoned racial hatred or religious intolerance, contained in the following:

"Volunteer watchmen stand guard 24 hours a day over some Negro churches. Jewish synagogues have floodlights for the night and caretakers. Dynamite attempts have been made against the two principal Jewish temples in the last 18 months. In 11 years there have been 22 reported bombings of Negro churches and homes. A number were never reported officially."

The undersigned, a member of the city commission, the governing body of the city of Birmingham, acting under section 914, title 7, Code of Alabama of 1940, respectfully demands that you publicly retract the following separate and several portions defamatory of him, of the article entitled "Fear and Hatred Grip Birmingham," published in the April 12, 1960, issue of the New York Times, viz:

1. "Fear and Hatred Grip Birmingham."
2. "Racial Tension Smoldering After Belated Sitdowns."
3. "Birmingham seems veiled in the poisonous fumes of distant battles."
4. "But more than a few citizens, both white and Negro, harbor growing fear that the hour will strike when the smoke of civil strife will mingle with that of the hearths and forges."
5. "It is not accidental that the Negro sit-in movement protesting lunch-counter segregation has only lightly touched brooding Birmingham."
6. "The reaction has been new manifestations of fear, force and terror punctuated by striking acts of courage."
7. "Every channel of communication, every medium of mutual interest, every reasoned approach, every inch of middle ground has been fragmented by the emotional dynamite of racism, reinforced by the whip, the razor, the gun, the bomb, the torch, the club, the knife, the mob, the police, and many branches of the State's apparatus."
8. "Telephones are tapped or there is fear of tapping."
9. "Mail has been intercepted and opened."
10. "Sometimes it [mail] does not reach its destination."
11. "The eavesdropper, the informer, the spy have become a fact of life."
12. "Birmingham's whites and blacks share a community of fear."
13. "By Birmingham custom, persons charged with vagrancy are not admitted to bail. They are held incommunicado for 3 days. In actual practice, such a prisoner is sometimes permitted to make one telephone call. But not always. A person arrested on a vagrancy warrant simply disappears for 3 days. His friends and family may not know what has happened to him."
14. "Police Commissioner Connor was elected in 1958 on race hate platform."
15. "He [Commissioner Connor] went into eclipse for several years, but made a comeback in 1958, running on a platform of race hate."
16. "'Bull is the law in Birmingham, like it or not,' a businessman said."
17. "He [Commissioner Connor] once said: 'Damn the law—down here we make our own law.'"
18. "On another occasion he [Commissioner Connor] declared: 'White and Negro are not to segregate together.'"
19. "A test of the forces symbolized by Mr. Connor is now in the making—a product of the seismic Birmingham reaction to the Negro student sit-ins."

CATLEDGE'S STATEMENT

The statement by Mr. Catledge follows:

The New York Times and its reporter, Harrison Salisbury, are threatened with a libel suit by three commissioners in the city of Birmingham, Ala., growing out of two articles written by Mr. Salisbury which appeared in the issues of the Times of April 12–13, 1960.

In accordance with Alabama statutes plaintiffs in a prospective libel action have the right to make a written demand upon the defendants for a public retraction and apology of the matter published. If the defendants publish within 5 days a full and fair retraction no vindictive or punitive damages can be recovered. The commissioners of Birmingham have made such a demand. It is being published in full in today's paper.

The stories from Birmingham were prepared by a reliable and experienced reporter. They were based on interviews with residents of Birmingham and in addition brought together material which had previously been reported in the Birmingham press and elsewhere. The Times standards require the reporting of the news in its fullest and most balanced form. In keeping with those standards the demand for retraction is being published so that our readers may know the elements of the Salisbury articles which the Birmingham commissioners feel are unfair.

In addition, we have invited William T. Engel, chairman of the Birmingham Committee of One Hundred, to prepare a statement of its point of view, which the Times will publish when it is received. The Committee of One Hundred is composed of leading Birmingham businessmen and has been in existence for a number of years to attract industry to settle in the Birmingham area.

The two articles about Birmingham constituted a story of the tension that our reporter concluded exists there. We recognize that the articles did not stress the obvious fact that an overwhelming percentage of the citizens of that city lead happy and peaceful lives in a growing and prosperous community. Nor did the article stress the equally obvious fact that this substantial element of the citizenry deplores any lawlessness that may exist in their city and is working in its own way to correct and reduce such tensions as exist.

Should further investigation by the Times indicate that any statement in the Salisbury articles is incorrect or inaccurate in any respect the Times will publish an appropriate correction.

National Science Foundation's Program of Summer Institutes for Science and Mathematics—Springfield, Mass., Receives 23 Awards

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. BOLAND. Mr. Speaker, all of us can point with pride to the National Science Foundation. It was established 10 years ago to promote the progress of science in America. It has done and is doing an outstanding job in this field.

All of the programs of the National Science Foundation are important and all are contributing to a remarkable activity in the development of scientific interest in America. This interest has been stimulated by the fantastic progress that has been and is being made on all levels of scientific endeavor. Atomic energy, missiles, and space technology have highlighted many of the Federal Government programs. These, of course, are the more glamorous efforts that catch the headlines. But scientific advances run the whole gamut of our national life. The Nation can continue to advance in this whole field only if it continues its herculean effort. This effort can succeed only if trained people participate. It seems to me, that participation must be predicated on an informed and educated people.

The National Science Foundation is one of our Federal agencies dedicated to and responsible for the task of stimulating interest in science and mathematics. It has developed a fine program to this end. All of us are pleased to know that it is producing excellent results.

Mr. Speaker, one of the program objectives is designed to improve the effectiveness of teaching in science, mathematics and engineering in American schools, colleges and technical institutes. This program is the Institutes For Science and Mathematics Teachers. The National Science Foundation-sponsored institutes began in fiscal year 1953 with two summer institutes for college teachers. The program was immediately successful, and the continuing evidence of success has resulted in rapid expansion. Institutes for high school science and mathematics teachers have been provided since fiscal year 1954. General enthusiasm for these has led to continued emphasis on the provision of such special training opportunities for high school teachers. The program for the coming fiscal year of 1961 will make it possible for approximately one-fifth, or about 28,000 of the secondary school science and mathematics teachers in the country to participate in an institute.

Mr. Speaker, one vital area which must be strengthened if we are to be successful in improving the teaching of science and mathematics lies virtually untouched. This is in the elementary schools. Studies show that elementary

school children ask more questions about science than any other subject. Their interest in the field is enormous. However, the typical elementary school teacher has a meager background in science, and is unable to answer the questions. Often times, the subject is poorly taught, if not shunned completely. By the time the children reach secondary schools, many have lost all interest in science, convinced that science is difficult and not for them. Many fear the science and mathematics they must take. Many potential scientists of high ability are lost to the field and to the Nation. Adequately prepared secondary school teachers can help in some measure to overcome this difficulty, but it is important to remember that much of the trouble is generated in the elementary schools.

I am convinced that the program, now in the pilot stages, of the National Science Foundation is one of the most needed in this area. In the fiscal year 1961 this program embraces some 12 summer institutes for approximately 500 elementary school supervisors and key teachers.

Mr. Speaker, all over the United States, communities are participating in these excellent programs sponsored by the National Science Foundation. I am convinced that it is one of the most worthwhile endeavors of this outstanding Federal agency. Its success means so much to the future of our Nation. Without the manpower to do the great job that confronts this country in the scientific fields, we would surely be doomed to failure. The programs of the Foundation will help immensely to meet the need and supply the manpower.

Mr. Speaker, I am pleased to insert in the RECORD, a news clip from the Springfield (Mass.) Union of April 27, 1960 indicating National Science Foundation-sponsored awards to teachers in that city. I congratulate the recipients of the awards and am pleased to know that my community is actively participating in the program:

AWARDS GIVEN 23 TEACHERS IN SCIENCE STUDY—FOUNDATION'S FELLOWSHIPS GO TO RECORD NUMBER IN CITY HIGH SCHOOLS

A record 23 Springfield high school teachers have been awarded full tuition summer fellowships by the National Science Foundation under a program aimed at promoting better science and mathematics teaching in the Nation's secondary schools.

FROM TECH HIGH

Deputy Superintendent M. Marcus Kiley announced Tuesday that 11 of the recipients are from Technical High School, 4 each from Classical High and Buckingham Junior High, and 1 each from Trade High, Chestnut Street, Forest Park and Classical Junior High Schools. One woman was included in the group.

Winners were picked by the foundation on the basis of ability after evaluation of applications by a panel of scientists. The fellowships carry travel and tuition costs and a weekly stipend averaging $75. In addition, there is a dependency allotment of $15 a week to a maximum of four dependents. Studies at the universities normally run from 6 to 12 weeks. The teachers will take two courses in the fields of either biology, chemistry, mathematics, or physics.

Fellowship recipients and colleges they will attend:

Technical High: George O. Comer, 173 Navajo Road, University of Connecticut; James M. Curran, 672 High Street, Holyoke, Clark University; Norman P. Forest, 36 Valley Road, Brown University; John J. Haynes, 52 Woods Avenue, East Longmeadow, Oneonta College; Henry A. Hewitt, 209 Gifford Street, Clarkson College; William C. Kennedy, Jr., 322 Elm Street, East Longmeadow, Fordham University; William F. Dolan, 42 Carver Street, University of Vermont; Francis M. Lamoureux, 102 Miller Street, Ludlow, Brown University; David P. Lawrence, 95 Thompkins Avenue, East Longmeadow, Clark University; John V. O'Keefe, 115 Anthony Street, Agawam, Worcester Polytechnic Institute.

CLASSICAL'S REPRESENTATIVES

Classical High: Walter F. Szetela, Jr., 230 Hadley Street, South Hadley, Princeton University; Mrs. Beulah S. Towne, 27 Glenwood Circle, Longmeadow, Bowdoin College; Robert F. Wessman, 33 Marengo Park, Holy Cross College; William R. Young, 44 Myrtle Street, Rensselaer Polytechnic Institute.

Trade High: Boyd M. Afton, 35 Maple Street, Brookfield, Worcester Polytechnic Institute.

Buckingham Junior High: Gerard F. Magee, 24 Dorne Street, Rutgers University; Robert B. Stevens, 203 Albemarle Street, Brown University; John A. Stone, 2111 Wilbraham Road, University of Connecticut; Ronald A. Whyte, 163 Breckwood Circle, Indiana University.

Chestnut Street Junior High: Leo J. Santucci, 11 Foster Street, Palmer, Williams College.

Classical Junior High: Kenneth E. Cook, Jr., Bald Mountain Road, Bernardston, Wesleyan University.

Forest Park Junior High: John J. Sullivan, 278 Franklin Street, Holyoke, Hamilton College.

Mission Accomplished?

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. DORN of South Carolina. Mr. Speaker, in these times of bipartisanship, coverup, and censorship, it is most refreshing to see the Washington Evening Star raise questions about the conduct of our State Department in Korea. The State Department contributed to the violent overthrow of the Rhee government by raving mobs. If the State Department's objective in Korea was to get rid of the father of the Korean Republic, then their mission has been accomplished, but to raise up on a stable government in its place on the wings of violence and emotionalism is an entirely different matter.

The following is an editorial from the Washington Evening Star of April 22:

MR. RHEE IS THROUGH

The real objective of the Korean rioters—to get rid of President Syngman Rhee—now has been realized. Mr. Rhee has resigned, and there is nothing for the American people to do now except to wait and see what emerges in Korea.

Actually, the Rhee government was doomed a week ago when, at the peak of bloody rioting, our State Department issued a public rebuke to the Korean "strong man." This was in the form of a statement which termed the "demonstrations" in Korea a product of repressive measures "unsuited to a free democracy," which indicated apprehension concerning "repercussions abroad," and which called upon President Rhee to prevent "unfair discrimination against political opponents of a party in power." Inevitably, in our judgment, and despite after the event disclaimers, this was interpreted in Korea as indicating State Department sympathy with the objectives of the rioters. At any rate, after this State Department pronouncement, the rioting, once suppressed by martial law, flared up anew and brought down the Rhee government.

Now the question is: Who will govern in Korea? Will the shape of the new government be dictated by the students—by those who looted and sacked the home of the Korean Vice President, not to mention side excursions in burning, pillaging and vandalism? Or will it be possible to find some responsible new leader who will be able to assert and exercise the authority which undoubtedly is required—and this without regard to whether it is described as democracy or dictatorship? This is something for which the State Department has a large responsibility and with which it should be busily concerning itself. For there is much basis, we fear, for the reported feeling among some Asian diplomats that the United States has acted too hastily in this matter. It is one thing to bring down the head of a small and dependent state on grounds of wrongdoing or dictatorship. It is something else to raise up an adequate replacement.

Competition in a World Economy

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. SIKES. Mr. Speaker, for printing in the CONGRESSIONAL RECORD, I submit a strong and important address by Edward A. O'Neal, Jr., president of the Chemstrand Corp., which was presented to the Charlotte (N.C.) Textile Club, on April 11, 1960. It is entitled, "Competition in a World Economy." I strongly recommend its careful reading.

COMPETITION IN A WORLD ECONOMY

(By Edward A. O'Neal, Jr., president, the Chemstrand Corp., Decatur, Ala., presented to the Charlotte Textile Club, at Charlotte, N.C., April 11, 1960)

We have moved into a new decade—a new decade by the calendar and the second decade for my company, the Chemstrand Corp.

We have just left the fifties, when despite a major recession our Nation's economy showed great growth and development and our science and technology continued to move ahead at a rapid pace.

Now we have entered the sixties—a decade in which the population is on the rise and within the next 5 years is expected to top 200 million in the United States. Consumer incomes are expected to reach new heights. Total national output of goods and services is expected to exceed $500 billion in 1960 and to continue that rising trend into this 10-year period.

It can be the brightest period in the economic history of the United States—if we do not allow its problems to outweigh its promise.

During the years which followed on the heels of World War II, we were conditioned to expanding markets which absorbed

all we were able to produce. The major problem we faced was to build production. Our own people in the United States were hungry for goods. Nations around the world, rebuilding war-torn economies needed our products.

Within the last 2 or 3 years, we have seen a drastic reversal of this situation. We find ourselves in a tough, competitive world—and we must, if we are to remain strong economically—condition ourselves to meet any competition. We must show that we have not forgotten how to compete.

As a businessman and a representative of the textile industry, I would like to suggest steps we can take toward strengthening our competitive position.

1. We should place great emphasis on our programs of research and development. It is unthinkable that this country which has been noted for its ingenuity and ability to innovate, should lag behind in new products and new applications.

2. We should seek to engender a change in the political philosophy and attitudes of our governmental leadership. We must make sure that our leadership is attuned to the needs of the Nation and realistically facing the facts of life.

3. We should develop better market planning—marketing programs that are aggressive where they must be aggressive and subtle where there is need for subtlety. Better means of distribution for our products.

In short, we must be able to compete internationally and establish a firmer place in the world markets. At the same time we must be able to maintain and build our markets domestically.

The sixties will definitely offer greater challenges and pitfalls than did the fifties. The latter was a good period for us, particularly, for Chemstrand. For if you disregard the year in which it was organized and chartered (1949), you can say that our company was a child of the fifties. That was the decade in which it became a producing company with its Acrilan acrylic fiber facilities at Decatur, Ala., and its nylon producing facilities at Pensacola, Fla. This was the decade in which we gained recognition in the field of chemical fibers. Now that we are in the sixties, we like to think we have gained a measure of maturity, with at the same time capacities for continued growth, both at home and abroad.

My company decided several years ago to license our acrylic fiber patents and know-how abroad. We realized it was inevitable that the great industrial areas would have their manmade fibers. We licensed in the United Kingdom for the British Commonwealth, in Italy for the European Common Market, and in Japan for the East. In each case, we participate in the equity of our associates abroad and retain directorships in these companies in proportion to our holdings. Although in the case of Italy and Japan we do not have financial control, our ideas and advice are sought and honored. In a small way, we are part of the economy of these countries. All three foreign companies started production in early 1959. In addition, the free exchange of know-how, both technical and commercial, is already of assistance to the corporation. We are firmly convinced that the future of our segment of the textile industry depends upon our ability to sell and compete on an international basis.

Chemstrand, as a producer of basic fibers, is inseparably linked with the textile industry. That we have advanced is proof that the textile industry has moved ahead during the same period.

We are one of the largest and most important industries in the United States and in the world. Although it is one of the oldest industries in the world—one which reaches back to prehistoric times—we find that during the past three decades or so, the textile industry has kept pace with, and in many ways led the advancing world. Our technology has improved, and today the textile industry has better equipment and more and better materials with which to work than ever before.

The development of manmade fibers has spurred research in all fibers. Even the natural fibers, which largely were unchanged for centuries, have taken on new versatility as the result of improved processes and recently developed finishes which fit them for dozens of new end uses.

At the same time you have a selection of manmade fibers which offers totally new concepts in fabrics and specific advantages for certain applications. Moreover, in this highly competitive field you find producers of these chemical fibers working constantly to improve fiber qualities and to engineer them to new specific applications. These fibers—which are synthesized from coal, gas, air, and water—can be controlled to the closest of specifications. Variations of the fiber properties to meet end uses will be limited only by the ingenuity of the chemist and the engineer.

Modern living with its almost universal central heating and air conditioning in homes, offices, and even in the family automobile has created demands for lighter clothing and covering. Chemical fibers have provided the means to meet this challenge and have made possible concepts of care in clothing far beyond anything thought possible 10 years ago.

Consumer demand for these qualities and properties in fabrics has brought tremendous growth to the chemical fiber industry. The noncellulosics, which right after World War II made up less than 1 percent of total fiber consumption, had by last year achieved a penetration of approximately 9.3 percent.

If we can believe forecasts, not only by our own market analysts but by independent sources as well, this trend is expected to continue, and use of noncellulosics in the United States should exceed a billion pounds before 1965.

There is always speculation about the possibility of newer types of fibers. The potential is great, and vast sums are being spent on research exploring many avenues. The strongest current trend of development, however, is toward the modification of existing fibers, both chemically and physically, to impart to them properties that better suit them for consumer and industrial applications. Examples can be found in two Chemstrand innovations developed during the past year—our Cumuloft textured nylon carpet yarn, which is expected to develop in better quality nylon carpets during the year, and dope-dyed Acrilan acrylic staple fiber, which is making its initial market penetration in men's half hose. At present, my company's overall development expenses—including basic and application research, engineering research, and process improvement—run annually into eight figures. And there are six other major companies now producing chemical fibers, some of which I am sure spend as much or more on research activities in the field as we do. This vast effort must inevitably produce results which will provide better materials for the textile manufacturers and ultimately better products for the buying public.

Now let's turn from the bright side of the picture to the problems we discussed earlier—specifically the rising competition in many parts of the world. Low-cost textile products are moving into this country in ever-increasing volume, while our export market is declining; the combination results in excess capacity on our farms, in our mills, and in our factories. Mr. Harry Dalton, my friend and colleague, in his able address before you in February, gave you a thorough analysis of the import-export situation, its effects on the industry and the economy.

There are several points I should like to emphasize in this matter of international trade and its effects on the well-being of our overall economy, and our industry in particular.

This Nation is the strongest force and still the greatest economy in the world. The latter is the cornerstone around which the other free nations have rebuilt their economic security since World War II. We must remain strong industrially and economically if the Western World—and our own Nation—is to be able to withstand the pressure of the Communist bloc.

In respect to our general economy we have built the highest standard of living ever known, and we have assisted in building up the economies of our friends and allies through a very generous contribution of our effort, our technology, and our earnings. In developing our own standard of living and assisting our friends, we have allowed an inflationary trend to build into our economy, thus adversely affecting the value of our currency. We have traded away through our policy of free trade too many of the checks and balances our fathers built into our democratic system.

Under the guise of the Foreign Trade Agreements Act of 1934, as amended, and extended to June 1962, we have destroyed and will continue to destroy the balances required to maintain our high standards by negotiations at the international level through the agency General Agreements on Tariffs and Trade. We have sent Government minions into negotiations against specialists. I call to your attention the fact that our Congress has never recognized this agency formally. We have been at least inept in our negotiations, if not illegal under our Constitution. In accepting the results of these negotiations to lower our tariffs, we have accepted so-called reciprocal tariff reductions abroad, while ignoring other more potent restrictive practices abroad, such as currency control, import licenses, subsidized exports.

There are laws on our books which, if administered more in our interest, would clear up this peril. There is current legislative action tabled in Washington urging the correct administration.

We must recall the sense of values that built us into the powerful nation we are today. To mention a few, "A full day's work for a full day's pay." "A penny saved is a penny earned," "Profit is the result of productivity." Here again, over the last 25 years individual initiative and effort have been dulled by the paternalistic theories of big government (and its inefficiencies) that the Government owes everyone a living. We can lose and we are losing the rights of the individual so well provided for by our Founding Fathers. We have allowed legislation that is leading to loss of man's right to work; we permit taxation as a discriminatory tool to spread the wealth and destroy savings, to subsidize and thus make noncompetitive whole segments of our economy (cotton for example).

We are a strong nation; we have the greatest industry in the world. We are a religious people. We are ahead in our standard of living, in our technology, productivity, and salesmanship. Militarily, we are the strongest nation on earth. Our problem is to stay ahead.

Do you remember that old song "Accentuate the Positive"? I think it's worth remembering. I believe we may be drifting into a negative approach—everyone is emphasizing the negative. Russia is first with their sputnik, so we're behind in science, education, and adaptation. Because we like to own two automobiles and have air conditioning and proper food, we are going soft, and ad infinitum.

First, then, let us accentuate the positive and, in the American way, pitch in and eliminate the negative.

Second, we have a great leadership in our Government, our President and his staff, our Senators and Representatives. Our job is to tell them what we want and in no uncertain terms. I would like to dwell on this just a moment.

We elect our Senators and Representatives. That is our first responsibility. Apparently, we're inclined to let it rest there. We also have the responsibility of keeping them informed of our requirements, national and local, and to insure by all means available to us their actions on our behalf. I'm afraid we wait for them to come to us and suggest our needs and requirements, especially in an election year. May I suggest we reassume our responsibilities?

This is a major undertaking and, in our case, a test of industrial leadership. We will have to do a grassroots job here. Badgering the executive and judicial branches of our Government is all well and good. But in my estimation, this is not the answer. The answer lies in the legislative branch, where the laws are made and our moneys appropriated, and we elect our Representatives and Senators. It is on them we must relie.

I firmly believe that should the entire textile industry—including wool and cotton growers, manmade fiber producers, and the textile manufacturing industries—set common goals and develop economic information for the total industry, then use our knowledge and common purpose to inform and instruct our Senators and Representatives as well as the public and the Government, we will do a job. I believe that in nearly every State in the Union the votes of people engaged in our industry would be sufficient to get serious attention, and action.

Our textile industry has done a great job in the face of increasing difficulties. We are one of the largest employers in the country; we have a loyalty among our employees unmatched in industry, and we propose to maintain this relationship. We are constantly improving our efficiencies, our processes, our machines, and methods of operation to produce better goods at lower cost. We continuously study our markets and devise new and better methods of distribution.

Nevertheless, these efforts must be stepped up if we are to stay ahead of competition. We should be unafraid to explore new techniques and procedures utilizing the fine tools which science and technology have given and are giving us. We may need to streamline our manufacturing processes, taking full advantage of such relatively new tools as our electronic computer systems.

We should throw greater emphasis (expenditure) into research. Our mills and factories will continue to sell those things unique in design and performance.

We must accelerate the art and science of distribution. Here is an area in which, perhaps, some of us have been remiss. Our marketing programs must be the result of long-range planning, and yet with a high degree of flexibility built in. Instead of sitting in paralyzed panic, waiting for the coup de grace from low priced imports, we should explore the foreign field to see what we can sell them. This will require that we make an effort to determine what other countries want. We must study foreign requirements, designs, styles, colors, and qualities of performance that appeal to potential oversea buyers. We should innovate, and take full advantage of the appeal of newness.

We should make certain our oversea representatives have at least a good fundamental understanding of foreign customs and manners. The resurgence of industry in countries around the world means a greater potential market for the goods we have to sell. It is a market we can ill afford to overlook.

Above all, let us not depend wholly upon Government to solve our problems. The tariff question is not one to be approached hastily, and with the thought only of today, tomorrow and the next day. It is worthy of deep, thoughtful consideration. I personally feel that until the standards of living in other nations more nearly approach that of ours, some program of selected tariffs will be necessary—perhaps one based on the differentials in wage rates. This would make provision for a lowering of tariffs as wages and standards of living rise in other countries.

We can do much to become competitive, however, through our own efforts; through concentrated efforts to provide superior quality goods and service to our customers. If price alone determined sales, General Motors would never sell Cadillacs. We must make our great advantages count for the maximum—our well organized programs of research and development; our production know-how and our marketing skills.

Let's accentuate the positive.

Newsweek Calls Draft "Campus to Chaos"

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in the April 4 issue of Newsweek magazine there appeared a thoughtful article on the system of military personnel procurement we now use, the draft. This article highlights the deficiencies in that system, deficiences that affect not only the quality of our military manpower but also the operation of our civilian economy. The question is not whether to let young men "get out" of their obligations to the country, and the article points this out quite well; the question is how to get the best in terms of military organization and defense.

I would like to place this article in the RECORD:

[From Newsweek, Apr. 4, 1960]

THE DRAFT—CAMPUS TO CHAOS

Is there any sense trying to plan a career? Is it worthwhile to look for a permanent job? Should I get married? These are questions that tens of thousands of young men graduating from college must face up to now, as they bump squarely into four words "Uncle Sam needs you."

For most who graduate from high schools, there will be time to postpone the question of military service. But what about the young men of 21 and 22 who know the draft is coming soon. Will they be drafted? And how soon? How can they find out?

Or should they just enlist and get it over with? Or what about signing up for one of the reserve programs? And if so, which one of a bewildering variety of alternatives should they choose?

At some time, almost every American family will be touched by the draft—now in a state of terrible uncertainty and confusion. For the first full appraisal of the draft, and its effect on the Nation's youth, a team of Newsweek correspondents headed by General Editor Jack Iams talked to students, parents, draft boards, and public officials across the Nation. Following is the summing up—and the answers to all-important questions:

The conscientious father in Arlington, Va., was both hurt and disturbed when his college sophomore son spoke up: "Dad, do you realize you've got me locked in with this darned draft thing until I'm 35? The other guys are just kissing it off until they're 26; and then they'll be exempt."

"I told you to do what the draft board requires," said the father. "To apply for a student's deferment while you're in college. Keep your grades up. It's true that makes you liable until you're 35. But that's the law."

"It may be the law," said the sophomore, "but the other guys aren't bothering. They say it's the only way you can beat the draft."

Father, sure he was right, reached for the phone. But the woman clerk at his son's draft board shook him to his conscientious core. "Your son's right," she said. "We just aren't bothering with college deferments any more. It's mostly redtape and the boys aren't filing requests for deferment. They hardly ever get called until they're 23 and they're out of college by then, so why bother? But, of course, since your son did apply, he's liable until he's 35. Otherwise, the liability ends at 26."

That is one example of draft-law confusion. Another, and a more common one, is provided by 23-year-old Robert Reed, who was graduated from Princeton in 1958 and is waiting patiently at his home in Chicago's suburban Lake Forest for his local draft board to tap him. "Ever since college, I thought it would be just a couple of months. Then as time went by I thought maybe they had forgotten all about me. Two months ago I had my physical. I guess I'll be called any time now. I've been waiting so long, it'll be a relief." But, relief or no, nearly 2 years of uncertainty will have gone out of young Reed's life, with 2 years of active duty and 4 years Reserve obligation still to come.

Or there is the Detroit officeboy, high school graduate James Gentner, now 21. "In June of 1957 I volunteered for induction. They deferred me for 3 months. They were supposed to call me in October that year, but they haven't done it yet. They may call today, tomorrow, a year from now. They've got me hanging." And while he's hanging, young Gentner marks time in a "just for now" job.

Another, and less resigned attitude, is that of 22-year-old Tom Taylor, a recent University of California graduate currently looking for a job in San Francisco. "I don't want to be drafted. It seems to be a waste of time in terms of career and the little good it does. I want to go into advertising but I can't get a good job because of the Army thing. I just hope there'll be a draft cut."

THE ODDS ARE 99 TO 1

These are typical cases, chosen at random. They can be multiplied thousands of times with individual variation in any part of the Nation today.

Few, if any, of these uncertain and badgered young men—and there are an eligible million and a half of them now in the draft age bracket of 18½ to 26—are unwilling to serve their country if they are really needed. But many wonder how great that need is, particularly when they know that the draft is currently taking fewer than 100,000 men a year (an estimated 93,000 in fiscal 1961). No wonder the temptation is to play "roulette," to lie low, say nothing, and hope to reach the magic age of 26 before one's number comes up.

But "draft roulette" is a game that plays havoc with nerves and with self-respect. Also, the chances of winning are slim. Right now, the Pentagon insists that "virtually no nonfather who is otherwise eligible is currently 'escaping' the draft." The word "virtually" is a slippery one, of course. But Pentagon officials say the odds are at least 99 to 1 against the "roulette" player.

But even those who gamble on waiting it out are weighted down by what many young men consider the heaviest burden imposed on them by the draft as it stands today: The near impossibility of going into a desirable

job upon which a career can be built. Obviously, the great majority of employers are reluctant to hire young men for positions of any real responsibility when there is no telling just how soon they may be plucked for service. Conversely, many of the young men themselves would prefer to mark time in some run-of-the-mill job—working in a filling station or at a soda fountain—rather than embark on a serious working life that may be interrupted at any time.

A dean speaks: The way a majority of college students apparently feel is summed up by Amherst's Associate Dean John C. Estey, Jr., himself an Air Force veteran of Korea and student adviser on military obligations:

"In my experience in counseling some thousand students, I think I could characterize their reaction to the draft as one of uncertainty, inequity, and—I am extremely sorry to say—frustration and demoralization.

"They are uncertain when they will be called, if at all. They sense the inequity involved when they see friends with the money and inclination go on to graduate school, planning to stay deferred until age 26 when they will be free men. They sense the inequity in the indefinite deferment of their friends who precipitate marriage and have a family, often with the sole purpose of avoiding the draft.

"If it is true that raw manpower is still needed in great numbers by the Armed Forces, this message does not get through to the college student. He does not see why he is needed. He reads about the competition with Russia in research, technology, engineering, economics, culture, and he wonders why his brains and training are not as valuable as his feet and back. Finally, he sees so many men being deferred for apparently flimsy rasons that he is bound to say, "How shall I get out of it?' rather than 'How shall I serve?' "

Ways out: For those who frankly want "to get out of it" there are a number of more hopeful prospects than "roulette." Some are matters of chance; some aren't. Briefly, these are the main avenues to "freedom":

Rejection for failure to meet physical or mental standards.

Fatherhood. Actually, fathers are not exempt or even automatically deferred; but they are far enough down on the order of preference to give them what is tanamount to indefinite deferment.

Continuance of graduate schooling until age 26—providing that a high average is maintained. The fact that this requires money has caused critics of the present draft setup to cry "one law for the rich, one for the poor." Representative WILLIAM H. MEYER, Vermont Democrat, has even compared the educational deferment to the Civil War practice of a draftee's hiring a substitute.

Pursuance of certain essential occupations, such as science, engineering, agriculture, and teaching. Decisions as to degree of essentiality are up to local draft boards.

The ministry, and study for the ministry. This is a flat exemption. It has raised problems, according to a California draft-board official, with such sects as Jehovah's Witnesses, some of whose members claim to be ministers though they hold full-time jobs.

Hardship cases—again determined by local boards. About a million and a half are currently listed in this category.

To what extent any or all of these categories are being exploited by the unscrupulous draft-dodger, nobody knows for sure. Draft-board officials are generally convinced that the successful faker is rare, indeed, though the tendency these days is toward leniency, and as one put it: "We stretch a point not to create hardship."

But where the question of fatherhood is concerned, there is simply no way of knowing when a young man has cynically and deliberately got himself married and started a family strictly for draft avoidance. There are now 400,000 fathers who are as good as exempt. A recent Labor Department study estimates that 35 to 40 percent of the men reaching the age of 22–23 will have become fathers. Certainly many a parent must wonder uneasily if his son has made a hasty and perhaps foolish marriage, saddling himself with a family that he may not be able to support. One New Jersey father put it like this: "My kid, who is 22, swears that he wouldn't think of getting married except for old-fashioned romantic reasons. But in the same breath he talks about friends of his who have started families just to get out of service." And it is a standard gag among deferred students at the University of Southern California: "If your grades fall you'd better have a fertile girl on tap."

The job problem: If the normal course of marriage is upset by the draft, the normal path of starting on a career is even more seriously affected. The college graduate who wants a job as a steppingstone to better things is just out of luck. In a great many cases, as long as the draft hangs over him. It's true that if he is drafted out of a job, his employer by law must rehire him when he is free. But the fact is that most employers don't want to hire a 1–A in the first place.

Large companies with elaborate personnel systems are inclined to insist that draft imminence is no factor in their hiring policies. But a far more widespread attitude was bluntly put by the San Francisco Bank of America's vice president, Frank E. Young: "We usually wait until a young man has completed his draft requirements. If you take a man and put him through training and then let him go off for 2 years in the Army, we have to start him again from scratch and this isn't worthwhile."

Employment agencies are still more outspoken. An official of Detroit's Action Center put it: "Many employers express the stipulation that employees be 4–F or have completed military training. It is rather prevalent as a stipulation."

The fresh college graduates themselves say flatly there is almost no chance of getting a decent job—one that will lead anywhere—during the months of limbo between the bright day of graduation and the dark one when Uncle Sam's greetings arrive. What burns up the eligibles is that during this same period their friends who are rejected as unfit or who have become fathers are walking into the jobs of their choice and getting a long head start.

How vital? This disruption over the draft during what is, nominally anyway, the peacetime American way of life, raises a basic national question: What justification is there for continuing a law passed in a time of stress, namely 1940?

The very history of that law provides a partial answer. It was dropped at the beginning of 1947. It was renewed 15 months later, in 1948, when the Soviet aggression threat appeared clear and present. Even then the law's teeth were not really felt until the summer of 1950 and the outbreak of the Korean war. In September of that year, 50,000 were called up (compared with the present monthly average of about 7,500).

The draft law has been renewed fives times since then, most recently in February of last year for another 4-year stretch, until July 1, 1963. (It was no accident that Congress chose to set a nonelection year for the next bubbling up of the controversial issue.)

Baby crop: There was some opposition to renewal in Congress last time. There will almost certainly be more in 1963—barring some world upheaval—because that's when the postwar bumper baby crop will start crowding the registration lists. That means that the draft, purely in terms of providing the armed services with manpower, will be only a drop in the bucket. For that matter, it isn't much more than a drop in the bucket today, providing as it does less than 100,000 men annually to a total defense manpower of 2.5 million.

If that is so, why is the draft necessary even now?

Defense officials, led by Lt. Gen. Lewis B. Hershey, have plenty of answers, but they mostly boil down to this: If it weren't for the hot breath of the draft, volunteer enlistments would drop far below the point of sufficiency.

Assistant Secretary of Defense Charles C. Finucane, in charge of manpower and reserves, puts it simply: "Even if we don't take many people in the draft, we need it for a proper flow of enlistments. The Armed Forces would dwindle if you removed that impetus. We would never have time in an emergency to rebuild a Selective Service System if it were dissipated. Selective Service is the machinery in being, a pillar of our ability to mobilize manpower in an emergency." It is a hard argument to answer. One answer may come from England: there conscription has been abolished as of the end of this year, on the ground that sufficient volunteers are available to meet Britain's military commitments—and provide more efficient forces. But skeptical American officials reply that results of the British experiment won't be known for another 2 years.

It should also be stated, on the side of the draft, that the civilian officials who carry out most of the actual, backbreaking work of administering the law do a first-class, thoughtful, considerate job ("a beautiful job," says Georgia Tech's Dean Fred Ajax)—and furthermore, the bulk of them do it without pay.

Nevertheless, the great problems of disruption, delay, uncertainty, confusion, and general demoralization, where the flower of the Nation's young manhood is concerned, are undeniably present, casting their shadows across a nation opposed since its birth to the militaristic tradition. What can be done about it?

Two presidential aspirants have ideas on the subject:

Senator HUBERT H. HUMPHREY says: "I am not at all satisfied with the present law. One immediate step should be taken. Our whole program should be reviewed and revised by a special manpower commission of civilian members."

Senator STUART SYMINGTON, the candidate most deeply immersed in defense problems, says: "A force made up of volunteer professional military personnel is more effective and less costly than one dependent upon involuntary draftees. If the current atmosphere of complacency were dissolved, and a military career made more respected and attractive, the draft could be eliminated."

Keep it: Vice President RICHARD NIXON, on the other hand, has never changed from the position he voiced in 1956, when he said there was no "easy way" to maintain defense, and the draft, however hard a way, was indispensable to national security.

The average youngster, for all his grumbling, knows full well that behind all the confusion and uncertainty of the draft, behind the rosy promises of service recruiting officers, behind the inequities and the skulduggery and the smart-guy stuff, there lies the simple, basic need of his country's welfare. His complaint is not: "Why should I serve?" It is: "Tell me when and how I should serve, and to the best of my ability." He doesn't want his time wasted—and his time, in the long run, is the Nation's time.

At the time of the hearings and vote on the extension of the draft in the 1st session of this Congress, I presented testimony before the Senate Armed Forces Committee. In the light of this article, I think that this testimony bears repeat-

ing. I would like to enter this testimony in the RECORD:

STATEMENT OF HON. THOMAS B. CURTIS, OF MISSOURI, BEFORE SENATE ARMED SERVICES COMMITTEE, MARCH 3, 1959

Mr. Chairman, I appreciate the opportunity to testify before this committee on the very serious question of the extension of the induction provisions of the Universal Military Training and Service Act.

This act had a difficult birth and its life has been a strange one. If anyone doubts it let him ponder over its title. It is probably neither universal, military, nor training. It is theoretically a draft act, as it is popularly called.

I would like to review the legislative birth of this act from the time it received its undescriptive title if I had the time. Instead I will refer to the remarks I made on the floor of the House during various debates upon it. The first, April 3, 1951, pages 3220-3222 of the CONGRESSIONAL RECORD; April 12, 1951, pages 3786-3787; February 29, 1952, pages 1674-1678; May 17, 1955, pages 6497-6498; and stress the highlights.

Before doing this I would like to refer to the testimony I gave before the House Subcommittee on Education and Labor which reported out its version of the National Defense Education Act of the last Congress, an act which also does not live up to its title.

I quote: "Before Congress undertakes to extend the Federal Government's authority in the field of education it is essential that it thoroughly appraise the Federal Government's present role in this important area to determine whether its role is proper and conducive to the growth and stability of the educational system. Regrettably, this appraisal has not been made to any great extent to date. I am convinced that the greatest damage that is occurring in our educational system today stems from the role of the Federal Government during the past 8 years.

"Under the guise of a peacetime draft law the Military Establishment has effectively disrupted for the past 8 years the education and training of every youth in America. Even those who have not been drafted have had their plans disrupted by uncertainty. Those who have been drafted include potential teachers, engineers, scientists, and indeed any potential professional man or technician who have had 2 to 3 years taken out of the most crucial periods of their education. Their time has been devoted to largely sitting on their hands in a military uniform. If the military utilizes the peacetime draft system for its intended purpose, i.e., acquiring the personnel needed to carry out its functions, it would be an entirely different matter. Unfortunately, the peacetime draft law is being used to carry out the specious, impractical, and rejected philosophy that 'every American boy should have military training.' I say rejected philosophy because the Congress rejected the Military Establishment's request for universal military training. It was rejected, in part, because the military could never define by curriculum or even in general terms what constituted military training. During the debates on the various bills, members of this Committee on Education and Labor raised the point that if the bill really was to be a training bill it should be referred to the Committee on Education rather than to the Committee on Armed Services. Members of your committee warned, and I joined in that warning, that UMT would badly damage our educational system. I charge that the peacetime draft has been perverted in its use to a quasi-universal training program and indeed it has badly damaged our educational system and is continuing to do so.

"The first step that should be taken by this committee is to examine into this charge to see if it is substantiated. If it is, then it should recommend to the Congress what steps must be taken to require the Military Establishment to carry out the intention of the peacetime draft law and not subvert it. Such positive action should bring positive results, to wit: (1) We would improve our educational system, particularly in the area of scientists and technicians; (2) we would improve our defense strength because we would be getting our men trained in military science back to the jobs they are trained for and away from education for which they are not trained; (3) we would save billions of dollars that are presently being wasted on inadequate training and usage of personnel.

"In the 1920's and 1930 the American Legion sponsored a universal military training bill that was based upon an extension of the high school ROTC program. It had proved quite effective in training men for wars like World War I and to some degree World War II. The basis of this plan was the proper utilization of the educational facilities already existing in the society, rather than an attempted duplication of these facilities in the military.

"The need in modern warfare for technical skills, as opposed to close-order military drill skills indicates that we should be utilizing the educational facilities that exist in the society in the field of vocational education, instead of having the Military Establishment duplicate them at the cost of billions of dollars.

"We achieve at least three things by following a program based upon utilization of the educational plant already in existence, to wit: (1) We get better trained technicians; (2) we get these technicians at one-tenth the cost; (3) we work with rather than foul up the civilian educational system.

"Fortunately, this is not a matter of theory. It is a matter that was proved conclusively in World War II by the Seabee personnel procurement system. To illustrate, the Seabees needed bulldozer operators. They did not take 18-year-old boys with a couple of weeks boot training camp experience and send them for a few months to a bulldozer operating school set up by the Navy. Instead they offered enlistment opportunity with a suitable rating to the experienced bulldozer operators in the civilian society and accepted them even though they were fat and 40—if they really knew how to operate a bulldozer. The accomplishment of the Seabees in World War II is fabulous and resulted essentially from this personnel system.

"The Seabee formula was abandoned when the war was over. The Navy now operates a bulldozer operators school and takes young men, whether they want to be bulldozer operator or not and sends them to this school for a few months. The results are obvious: (1) You don't have a very good bulldozer operator; (2) after the enlistment period is up the man involved may or may not take a civilian job operating a bulldozer * * * likely not * * * so the skill is lost * * * (the Reserve program has not been carried out successfully to retain these skills); (3) the cost to the Navy of running the school is considerable; (4) the talents of the naval personnel who run the school are taken away from the fields where they could be efficiently utilized."

Unfortunately the House Subcommittee on Education and Labor did not make the studies I recommended. No committee in the Congress or executive agency to my knowledge has made such studies. Yet the truth of my basic observations is borne out by our common experiences and requires some pretty strong evidence to rebut.

The reason I am before this committee in the Senate is because the House Armed Services Committee made no study into these important charges. In hearings covering a period of 4 days and lasting only 7 hours and 13 minutes according to the committee's own records the extension of this draft act was passed out unanimously by the committee. An examination of the hearings demonstrates that it received the most cursory type of study. Not one educator testified. Not one person in the field of technical training testified. The testimony was exclusively that of representatives of the armed services and various church and other groups who were concerned with the spiritual aspects of the draft law.

I am concerned with the efficacy of the draft law in providing the type of defense this country needs. Not so strangely the most efficacious measure to provide the strongest defense happen to be the least costly. A fat man never could fight with efficiency and a fat Military Establishment can't fight any better.

The speeches I referred to in my opening remarks give sufficient detail to follow up the points I shall now state. If this committee undertakes to make a real study of these points I should be happy to supply to your committee staff the many reference books and other materials I have accumulated on this subject, hoping that some day some committee or even executive commission would undertake this important study.

The points:

1. An enlistee is considerably more valuable than a draftee. Enlistees are obtained by making the military service as attractive as possible.

2. Draft laws are necessary if there are insufficient volunteers. Yet relying on the draft law to meet personnel needs tends to weaken the efforts to attract volunteers. It is like getting used to relying on a crutch.

Therefore, drafting as a basis for getting personnel should be abandoned just as soon as possible. Indeed, it should be abandoned on a trial basis—just as a crutch should be abandoned—to see if a system of attracting volunteers will not work. And to test different methods of attracting volunteers.

3. To defend our way of life without having the very defense we set up destroy our way of life we must rely on a small standing military force backed by Ready Reserves:

(a) To make a Reserve system work the regular Military Establishment must try to make it work. One good test of whether they have tried to make it work is whether they are in a position to testify in detail as to why it does not work. The testimony of the leaders of our Military Establishment over a period of years on the inadequacies of the Reserve and National Guard systems demonstrate beyond much doubt to one who looks a little beneath the surface that they have not tried to make either system work.

4. Modern warfare (even the World War II variety) requires 90 percent noncombatant skills and of these noncombatant skills an increasing proportion are technical skills:

(a) Most of these skills have their civilian counterparts and these civilian type skills are readily adaptable to their military counterparts.

(b) The civilian educational system, including the vocational, trade, industry, etc., schools, has the specialists in the field of education and training.

(c) The leaders of the Military Establishment are specialists in the field of military science. Military science is a different field from education and training.

Therefore, the 90-percent noncombatant skills needed by the Military Establishment should be taught through the civilian educational system. The 10-percent combatant skills should be taught by the Military Establishment.

Corollary: The 10 percent needed for combatant duties could undoubtedly be procured through volunteer enlistment, particularly if the bright uniforms, medals, honors and veterans' benefits were reserved for this group.

Corollary: The 90-percent noncombatant skills could be procured through voluntary enlistment inasmuch as the men would be moved by the greatest incentive there is to be employed in skills they know and like.

5. A–1 physical specimens are not needed for noncombatant skills. A one-legged man can be a stock clerk. A midget an airplane mechanic. Only one thing seems to serve as a check on utilization of personnel with physical limitations: The cost of veterans' benefits. But if veterans' benefits are reserved for combatants this problem is eliminated.

6. Military law and discipline is required for combat and those who might be in combat. It is not the best or most efficacious system for utilizing noncombatant skills.

The Code of Military Justice of World War II evolved from centuries of battle experience was found to be inadequate when applied to the 90-percent noncombatant personnel. Without appreciating the fact that the error lay in trying to apply a system of discipline and law in an area where it was inappropriate we junked this time-tested code for a watered-down code which is no longer effective for combatant activity and doesn't do very well in the noncombatant area.

We should take a new look at the code for military justice. Set it up for combatant activities and combatants and withdraw it from noncombatant activities.

In other words, there is no sense in putting a military uniform on a Pentagon clerk. In fact, we cut down on the ability to recruit good clerks by subjecting them to military law.

7. A thorough job analysis of the technical skills needed by the Military Establishment should be done. At the same time an inventory of the civilian counterpart skills should be taken. Match the two groups to determine what may be lacking and set up an incentive system to encourage the training and the enlistment for training through the civilian educational system in those areas where there are skill shortages. Have a reserve system set up geared to receive these skills to keep them from becoming rusty and to keep them up to date with the needs of the military. Have a stepped-up civilian-type law during war or emergency to deal with absenteeism and malingering and I believe we will have a strong defense system.

Gentlemen, these are the points that have not been studied. I am satisfied a study of them would give a sensible answer to what some have looked upon as insoluble problems of how we are to have defense in modern warfare and sustain its cost, how we are to preserve and strengthen the education system that will continue our advance in science and technology and yet have the manpower necessary to man the defenses, how to defend our way of life without destroying it, or setting it aside for the nonce saying we will reset it up after the emergency.

The committee has several months to study this serious matter. I pray that you take the time to make this study.

Our military manpower policies are of great and far-reaching importance. Their implications are, unfortunately, too often lost to those to whom they are the most important; those groups which should have the most interest in this situation, the educators of the country for example, have been strangely silent.

It would be a shame to perpetuate a harmful system simply because the system in being is in being and there is no earnest search for a suitable alternative.

Goals for America

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. SMITH of Iowa. Mr. Speaker, Mr. Donald "Duke" Norberg, of Iowa, has for many years written for a number of newspapers in Iowa. He has become known to Iowans for his ability to state, with both brevity and clarity, whatever he concludes. He recently introduced a statement which was approved by the Democratic Midwest Conference at Detroit, Mich., on March 26, 1960. It forcefully sets forth the goals and the program of action which the vast majority in the Midwest States now endorse. This concise statement is as follows:

GOALS FOR AMERICA—AGRICULTURE

The abilities of the people of the United States of America to operate an expanding domestic economy with full recognition for human values, and provide dynamic and constructive world leadership, are inevitably tied to a realistic, responsive food and fiber policy.

This fact has been rejected by an inflexible, unimaginative, unfeeling Republican administration for 8 years and the rejection has had a disastrous impact upon agriculture as well as contributing to fringe hazards affecting the total welfare.

Results of Republican negativism, of reaction rather than action, are evident in statistics:

Net farm income has dropped 25 percent since 1952, and true purchasing power of farm families is at the lowest point since 1934. A further decline in farm income is predicted for 1960.

While the producer's share of the food dollar has been dropping to a 20-year low, there has been no corresponding decrease in the consumer's outlay for food. Further, the cost of ineffective Republican farm programs has multiplied many times, establishing an alltime record for consumption of taxpayers' dollars.

Remedial legislative efforts, launched by Democratic Congresses, have been crushed by presidential veto and administrative edict.

Comparative statistics tell only part of the story of shameful failure to manage abundance.

The family farm for generations has been more than a source of food and fiber. It has provided an environment rich in appreciation for social, cultural and spiritual values. It has energized schools, churches, and governments in rural communities across the land. It has been the base for businesses and professions that call a town home.

A society that permits allout destruction of the family farm contributes to more than economic ills. It helps bring on its own heart trouble.

While needlessly adding emphasis to the natural effects of technological progress on the rural economy, the Republican national administration has neglected to fully utilize the avenues for distribution of our abundant food resources. A food-stamp authorization that would benefit the undernourished at home goes unused, while underdeveloped countries which would benefit from a clear-cut policy of American food utilization are left wavering between hope and conjecture.

Recitation of failure is no comfort for the afflicted, nor is it adequate motivation for political philosophy and action. Americans know what's wrong. They have confidence that among them is the know-how that will correct mistakes. What they seek is leadership with purpose, with vision, with faith and determination that will help open the door to a new era of democratic achievement.

Traditionally they have found this leadership in the Democratic Party. Hopefully, they look toward it now.

The Democratic Midwest Conference respectfully recommends for adoption by the Democratic Party of the United States of America, for implementation by its elected officials with the advice and consent of producers and consumers, the following policy for American agriculture:

1. The adoption of production goals for food and fiber that will:

(a) Meet the demands of the domestic market.

(b) Fulfill the requirements of special domestic nutritional needs, including school lunch and milk programs and care of underprivileged.

(c) Meet the commercial demands of the foreign markets, on a cooperative basis with other exporters of food and fiber, and the special foreign program demands—primarily those which figure in economic growth of underdeveloped nations and enrich the prospects for peace.

(d) Meet the requirements for an adequate food and fiber reserve.

(e) Make possible, for farm families, realization of a fair share of the national income.

2. The utilization, in achievement of the goals, of varied methods of production and adjustment including land retirement, conservation practices, marketing agreements and quotas, compensatory payments and payments in kind from Government reserves.

3. The modernization of farm credit programs, with consideration for the current emergency needs in this field resulting from the agricultural depression.

4. A fresh and vigorous approach to the poverty problem in the low-production farm areas.

5. A strong system of farmer-elected committees which play a contributing role in formulating the positive food and nutrition policy, in referendums related to marketing agreements and production and marketing quotas, and in the local and national administration of the adopted programs.

Payroll Study

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. BOW. Mr. Speaker, the proposal for a salary increase for postal workers appears to be heading toward a deadlock between those who believe circumstances require an immediate increase and those who wish to postpone action until we have the benefit of the BLS study of the entire Federal payroll structure.

In order to take care of the most pressing needs of the postal employees, while recognizing the wisdom of a general pay-

roll revision, I suggest that we enact a bill increasing postal salaries at once with a termination date of December 31, 1961.

Such a measure would assure that the next Congress will consider and act promptly upon recommendations for a general payroll revision which will then be available. I believe this assurance might overcome the steadfast opposition of those who now oppose a salary increase, and it may be the only way to avoid repetition of what occurred in 1957. The Congress will have ample time in 1961 to go into the pay structure thoroughly so that a sensible, fair, and equitable system can be established before the expiration date of the temporary increase I have recommended.

The Federal Tax Collector Versus Local Responsibility

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a letter which I received from a constituent commenting upon a recent newsletter of mine to my constituents:

BALLWIN, MO., *April 18, 1960.*

Hon. THOMAS B. CURTIS,
Member of Congress,
Old House Office Building,
Washington, D.C.

DEAR TOM: I have just read the March issue of your newsletter, "A Report From Your Congressman." In this issue, you have gone to some length emphasizing the philosophy of government that what government matters can be handled locally should be handled. You particularly point out the Blatnik bill which would provide Federal aid to construct sewage disposal plants.

As you will note, I am a resident of Ballwin, Mo., and also an alderman in this community. We have been confronted with a deplorable sanitation problem stemming from the excessive use of septic tanks in our community. They have not been satisfactory in this area. This being the situation, our community has investigated the possibility of sewers, their costs and presently have a bond issue election on May 17, which will provide for a municipal sewer system which would serve 100 percent of our community. We're a small town with the population estimated at only some 6,000. The proposed bond issue would raise the present tax rate to our residents by $1.50 per $100 valuation.

My point is this: Even though Federal aid, or State aid, or county aid, or any aid on the surface would certainly seem a desirable thing in the construction of our sewer system and disposal plant, and having been directly confronted with this difficult problem, I wholeheartedly agree with your stand that this is a local problem and a local government should contend with it. And, I believe this is the will of most people. I know our mayor and board of aldermen have agreed that what the local government can cope with, it should. I believe the people are beginning to realize that services provided by the Federal Government for local projects are, in the final analysis, far more expensive than what the expense would be if provided by local governments. Our neighboring communities, Ellisville and Manchester, Mo., just recently voted expensive bond issues for a sanitary sewer system. It is gratifying to see small communities arise to the occasion when local conditions threaten their welfare.

Congratulations on your stand on the Blatnik bill, as well as the philosophy of government of which it is a part.

Yours truly,

HARRY SWANSON.

Eisenhower Says Connole Must Go

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1960

Mr. IRWIN. Mr. Speaker, confirmation has been given to the reported intention of the White House to drop William R. Connole as a member of the Federal Power Commission. It was asserted that the move is being made because of a belief that a better man can be placed in the job.

As in the case of the first report of administration intentions, the confirmation has been followed by public statements strongly in support of Commissioner Connole's reappointment. I feel obligated to include in the RECORD, under permission previously granted, an article published in this morning's New York Times and a letter appearing in the same edition of the Times, to bring to the attention of the Congress the opinions of persons close to the field in which the Federal Power Commission functions.

In addition to voicing support, the letter, which is from the professors of law at Columbia, Harvard, Yale, and Pennsylvania Law Schools, makes this telling point—a topnotch man will hardly be inclined to leave his business to take a regulatory agency post in Washington when he sees that a good performance, such as Commissioner Connole's, does not assure continuance in the agency position.

The article and the letter follow:

EISENHOWER SAYS CONNOLE MUST GO—TELLS NEWSMEN HE CAN FIND A BETTER MAN FOR FPC—OUSTER PROTESTS RISE

WASHINGTON, April 27.—President Eisenhower confirmed today that William R. Connole would be dropped as a member of the Federal Power Commission.

Asked why, the President told his news conference with evident irritation: "I think I can get a better man, that's all."

Shortly after the President made the decision known, a new testimonial came in for Mr. Connole. His reappointment was endorsed unanimously by the Great Lakes Conference of Railroad and Utilities Commissioners, meeting in West Virginia.

This conference includes the regulatory boards of 10 States and the District of Columbia.

OTHERS VOICE SUPPORT

Last week, it was learned, the utility commissioners from the Southeastern States endorsed Mr. Connole. Earlier, regulatory commissioners from the New England States, California and Tennessee had urged his reappointment.

Asked for comment on the President's statement, Mr. Connole said he had "never known the basis for this decision nor who made it."

"I believe I have discharged my duties on the FPC creditably," Mr. Connole said. "This opinion plainly has been shared by many others, including professional regulators throughout the United States. This is evidenced by the efforts that have been made by the State commissions of some 30 States urging the President to reappoint me.

"President Eisenhower has never indicated to any person that I know, and certainly not to me, wherein he has been dissatisfied with my performance."

TERM UP JUNE 22

Mr. Connole, a Connecticut political independent, has served on the Commission since 1955. His term expires June 22.

The case has aroused considerable controversy because Mr. Connole has been regarded for the last few years as the member of the Power Commission most determined to hold down natural gas rates. A group of mayors, calling for his reappointment, said he alone on the Commission had tried to protect the consumer.

Industry publications have said that Mr. Connole's reappointment was blocked by natural gas producers. Others have suggested that he was dropped because a more politically advantageous appointment could be made.

His place must be filled by either a Democrat or an independent.

URGES INQUIRY

Senator THOMAS J. DODD, Democrat, of Connecticut, issued a statement today saying that Mr. Connole had done a good job and that the reason for the opposition to him should be "smoked out."

"We've had a lot of trouble in Washington with Commissioners," Senator DODD said. "Some of them have resigned under fire. It hasn't been a pretty story. Now that we have a good one, let's keep him."

Senator WILLIAM PROXMIRE, Democrat, of Wisconsin, also deplored the decision. He said the apparent reason was that Mr. Connole "favors stricter control of the gas and oil industries than does Eisenhower."

The professors of administrative law and regulation at Columbia, Harvard, Pennsylvania, and Yale Law Schools wrote the New York Times today deploring the President's decision. They said they were shocked at the news.

DIRE EFFECTS SEEN

"A failure to reappoint Mr. Connole," they said, "will be a body blow to Government regulation, regardless of the merit of the new appointment.

"A first-rate man thinks twice before pulling up stakes and going to Washington if a good performance will not assure his reappointment."

The professors said they "earnestly hope that the President will reconsider."

Signers of the letter were Profs. Walter Gellhorn and William K. Jones of Columbia, Paul M. Bator, Clark Byse, Louis L. Jaffe, Albert M. Sacks, and Donald T. Trautman of Harvard, Paul J. Mishkin and Louis B. Schwartz of Pennsylvania, and Thomas I. Emerson of Yale.

It was disclosed last month that Mr. Connole, along with two other power Commissioners, had been visited privately by an attorney in a pending gas rate case, Thomas G. Corcoran.

A congressional hearing on the matter is scheduled for next Monday.

The White House decision not to reappoint Mr. Connole was made before the Corcoran matter was disclosed.

Asked today whether the decision against Mr. Connole had anything to do with the Corcoran visit, James C. Hagerty, the President's press secretary, said: "Not so far as I know."

REAPPOINTMENT OF CONNOLE URGED

To the EDITOR OF THE NEW YORK TIMES:

The undersigned, professors of administrative law and government regulation in the Columbia, Harvard, Pennsylvania, and Yale Law Schools, are shocked by the President's statement that he does not intend to reappoint William Connole to the Federal Power Commission.

The regulatory agencies have been undergoing a severe loss of public confidence. In some instances standards of propriety have been lax and zeal in pursuing the public interest inadequate. There have been proposals for institutional reform. But no reform can dispense with the need of good men.

On the public record Mr. Connole has been such a man. "Keenest of the Commissioners" is the judgment of a writer in Fortune magazine. "Mr. Connole alone in the FPC," says a mayor's committee, "has held out for effective regulation." He has shown energy, intelligence, and zeal. His concern for the consumer has earned him the support of State utility commissions and the reported opposition of the companies.

A failure to reappoint will be a body blow to Government regulation, regardless of the merit of the new appointment. A first-rate man thinks twice before pulling up stakes and going to Washington if a good performance will not assure his reappointment. It becomes just that much more difficult to find capable men for jobs which at best have a limited appeal. We earnestly hope that the President will reconsider.

Paul M. Bator, Clark Byse, Thomas I. Emerson, Walter Gellhorn, Louis L. Jaffe, William K. Jones, Paul J. Mishkin, Albert M. Sacks, Louis B. Schwartz, Donald T. Trautman.

CAMBRIDGE, MASS., *April 27, 1960.*

Ways and Means Committee Amendments to H.R. 5

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the House that the Committee on Ways and Means has today adopted two amendments to H.R. 5, the Foreign Investment Incentive Tax Act. The committee proposes to offer these amendments to the House when the House reesumes consideration of H.R. 5. In view of the fact that it is expected that the House will resume consideration of H.R. 5 in the very near future, I am submitting the text of these amendments as well as the text of a press release issued by Chairman WILBUR D. MILLS in explanation of the committee amendments. I expect to submit at an early date a full, technical discussion of these amendments.

As pointed out in the press release, the major amendment would limit the provisions of the bill to the less developed countries. This amendment follows the recommendation of the Treasury Department and of the President in his budget message this year.

The text of the committee amendments and Chairman MILLS' press release follows:

Chairman WILBUR D. MILLS, Democrat, of Arkansas, Committee on Ways and Means, House of Representatives, today announced that the Committee on Ways and Means had adopted two amendments to H.R. 5, the Foreign Investment Incentive Tax Act, introduced by the Honorable HALE BOGGS, Democrat, of Louisiana. Chairman MILLS said that the committee would offer these amendments to the House when the House resumes consideration of H.R. 5.

The first amendment would limit the provisions of H.R. 5 to income earned and reinvested in less-developed countries and would also eliminate the so-called gross-up with respect to the dividend income of the Foreign Business Corporation. The second amendment would require corporations to meet the labor standards of the foreign country in which they are operating in order to qualify under the provisions of H.R. 5.

An explanation of the committee amendments follows:

1. (a) Limitation to less-developed countries.

The committee amendment limiting the provisions of H.R. 5 to income earned in less-developed countries follows the recommendation of the Treasury Department. Under the amendment, in order for a corporation to qualify as a Foreign Business Corporation and in order for a subsidiary of the Foreign Business Corporation to qualify, 90 percent or more of the gross income must be from sources within less-developed countries. The term "less-developed country" is defined as any foreign country, other than any area within the Sino-Soviet bloc, which the President of the United States has designated as a less-developed country, except that the President is not permitted to designate any of the following countries as a less-developed country: Austria, Belgium, Canada, Denmark, France, Federal Republic of Germany, Italy, Japan, Luxembourg, Monaco, Netherlands, Norway, Portugal, Sweden, Switzerland, United Kingdom of Great Britain, and Northern Ireland. The term "less-developed country" is defined so it may include oversea territories, departments, provinces or possessions without including the mother country.

The committee amendment also provides that the distribution rules relating to investment and payroll situated outside the United States and to prohibited investments in the United States are amended to refer to investment and payroll situated in the less-developed countries and to prohibited investments outside of the less-developed countries.

(b) Elimination of gross-up.

This committee amendment also provided for the elimination of the gross-up with respect to the dividend income received by foreign business corporations from foreign subsidiaries. The committee has before it a bill, H.R. 10859, on which public hearings have been held, which would provide for the gross-up with respect to the dividend income received by domestic corporations generally. The committee's decision, therefore, was to treat the foreign business corporation on a comparable basis, with respect to the "gross-up," with all other domestic corporations earning dividend income from foreign sources.

2. Substandard labor conditions.

This amendment provides that a foreign business corporation or a qualified subsidiary of the foreign business corporation will be disqualified for any taxable year for which the Secretary of Labor has determined that the corporation has operated in any less-developed country under substandard labor conditions. Any such determination by the Secretary of Labor is reviewable by the courts.

The concept of substandard labor conditions is defined in the amendment as a situation in which the corporation's aggregate remuneration (including remuneration other than in money) for employment is below the minimum standards required under the laws of the country concerned. If there are no such minimum standards, the amendment provides alternative tests. The first alternative test is the average standards prevailing for other employers in the same industry in such country or, if there are no other employers in the same industry, the average standards prevailing for other employers in similar industries. If the first alternative test is not available, then the second alternative test will be used by the Secretary of Labor, namely, where the remuneration is substantially below the standards generally prevailing in the industries of the country concerned.

The amendment provides that an investigation can be instituted by the Secretary of Labor on his own initiative or on application by any affected domestic party.

AMENDMENTS TO H.R. 5 (LESS DEVELOPED COUNTRIES AND ELIMINATION OF GROSS-UP)

Page 23, strike out the period at the end of the first line after line 17 and insert: ", etc."

Page 24, strike out the period at the end of line 1 and insert: ", ETC."

Page 24, strike out lines 7 and 8 and insert:

"(1) It derives 90 percent or more of its gross income from sources within less developed countries (within the meaning of subsection (e)),"

Page 24, lines 23 and 24, strike out "without the United States" and insert: "within less developed countries".

Page 25, line 2, strike out "without the United States" and insert: "within less developed countries".

Page 27, line 13, strike out "without the United States" and insert: "within less developed countries".

Page 27, lines 22 and 23, strike out "FOREIGN" and insert: "LESS DEVELOPED COUNTRY".

Page 29, after line 8, insert:

"(e) LESS DEVELOPED COUNTRY DEFINED; ALLOCATION OF ITEMS TO SOURCES WITHIN OR WITHOUT LESS DEVELOPED COUNTRIES.—For purposes of this subpart—

"(1) LESS DEVELOPED COUNTRY DEFINED.—A less developed country is any foreign country (other than an area within the Sino-Soviet bloc) or any possession of the United States with respect to which, on the first day of the taxable year, there is in effect an Executive order by the President of the United States designating such country or possession as an economically less developed country for purposes of this subpart. For purposes of the preceding sentence, an overseas territory, department, province, or possession may be treated as a separate country.

"(2) CERTAIN COUNTRIES EXCLUDED.—No designation shall be made under paragraph (1) with respect to—Austria, Belgium, Canada, Denmark, France, Federal Republic of Germany, Italy, Japan, Luxembourg, Monaco, Netherlands, Norway, Portugal, Sweden, Switzerland, United Kingdom of Great Britain and Northern Ireland.

"(3) SOURCE RULES.—Items of gross income, expenses, losses, and deductions shall be allocated to sources within or without less developed countries under regulations prescribed by the Secretary or his delegate. Such regulations shall, to the extent the Secretary or his delegate finds practicable, be consistent with the principles of part I of this subchapter (relating to determination of sources of income)."

Page 29, strike out lines 20 and 21 and insert:

"(A) the gross income from sources without less developed countries, and".

Page 30, strike out line 3 and all that follows through line 4 on page 31, and insert:

"(2) The taxable income of a foreign business corporation shall be the amount determined under paragraph (1), minus the sum of the deductions allowed by this chapter which are allocable to sources without less developed countries.

"(b) REINVESTED FOREIGN INCOME DEFINED.—

"(1) IN GENERAL.—For purposes of this subpart, the term 'reinvested foreign income' means the taxable income from sources within less developed countries.

"(2) SPECIAL RULES.—In determining the reinvested foreign income for any taxable year—

"(A) No deduction shall be allowed for income, war profits, and excess profits taxes which are allocable to sources within less developed countries and which are paid or accrued to any foreign country or to any possession of the United States.

"(B) If the net long-term capital gain from sources within less developed countries exceeds the net".

Page 33, strike out lines 4 through 8, and insert:

"(ii) the ratable portion of the income, war profits, and excess profits taxes which are allocable to sources within less developed countries and which are paid or accrued to foreign countries and possessions of the United States during the taxable year of the addition out of which the substraction is made."

Page 34, strike out lines 14 and 15, and insert:

"(b) DISTRIBUTION BY REASON OF INVESTMENT AND PAYROLL WITHOUT LESS DEVELOPED COUNTRIES.—"

Page 34, line 25, strike out "within the United States" and insert: "without less developed countries".

Page 37, line 20, strike out "without the United States" and insert: "within less developed countries".

Page 42, strike out lines 16 through 22 and insert:

"(A) any income, war profits, and excess profits taxes which are allocable to sources within less developed countries and which are paid or accrued during any taxable year to any foreign country or to any possession of the United States by a foreign business corporation shall not (except as otherwise provided by this subsection) be taken into account for such taxable year, and".

Page 43, beginning in line 1, strike out "such taxes paid or accrued to foreign countries and possessions of the United States" and insert: "such taxes so allocable and so paid or accrued".

Page 44, after line 3, insert:

"For purposes of paragraph (2), the taxable income from sources without the United States shall be determined by including the amount subtracted from the reinvested foreign income account for the taxable year and, if the corporation is a foreign business corporation for the taxable year, by excluding the items referred to in section 952(b) (relating to definition of reinvestment foreign income)."

Page 44, strike out line 10 and all that follows through line 2 on page 45, and insert:

"(c) FOREIGN TAXES INCLUDE DEEMED TAXES.—For purposes of this subpart, any reference to income, war profits, and excess profits taxes paid or accrued to any foreign country or to any possession of the United States shall be treated as including such taxes deemed paid under section 902."

Page 46, line 17, strike out "without the United States" and insert: "within less developed countries".

Page 47, lines 6 and 7, strike out "without the United States" and insert: "within less developed countries".

Page 48, line 1, strike out "a foreign country" and insert: "a less developed country".

Page 48, line 13, strike out "without the United States" and insert: "within less developed countries".

Page 50, strike out "foreign" in lines 5, 14, and 19, and insert: "less developed".

Page 52, line 15, strike out "paid" and insert: "which are allocable to sources within less developed countries and which are paid".

Page 54, lines 12 and 13, strike out "without the United States" and insert: "within less developed countries (within the meaning of section 951(e))".

Page 58, line 19, strike out "without the United States" and insert: "within less developed countries (within the meaning of section 951(e))".

AMENDMENT TO H.R. 5 (SUBSTANDARD LABOR CONDITIONS)

Page 29, after line 8, insert:

"(f) DISQUALIFICATION FOR SUBSTANDARD LABOR CONDITIONS—

"(1) IN GENERAL.—For purposes of this subpart, a corporation referred to in subsection (a) or (c) shall be treated as an ineligible corporation within the meaning of subsection (d) for any taxable year during which it operates in any less developed country under substandard labor conditions. Any determination that this paragraph applies to any corporation for any taxable year shall be made by the Secretary of Labor. Any such determination shall be final, except that it shall be subject to review by the courts (including the Tax Court of the United States) in a proceeding for the recovery of income tax or for a redetermination of a deficiency in respect of income tax.

"(2) SUBSTANDARD LABOR CONDITIONS.—For purposes of this subsection, the term 'substandard labor conditions' means aggregate remuneration (including remuneration other than in money) for employment which is—

"(A) below the minimum standards required under the laws of the country concerned, or

"(B) if there are no such minimum standards—

"(i) below the average standards prevailing for other employers in the same industry in such country or (if there are no other employers in the same industry) for other employers in similar industries in such country, or

"(ii) where there are no average standards referred to in clause (i), substantially below the standards generally prevailing in the industries of such country.

"(3) DETERMINATION AND CERTIFICATION BY SECRETARY OF LABOR.—

"(A) INVESTIGATIONS.—On application of any affected domestic party (if the Secretary of Labor has reason to believe that the conditions described in this subparagraph exist), or on his own initiative, the Secretary of Labor shall make an investigation to determine whether any corporation referred to in subsection (a) or (c) has operated in any less developed country under substandard labor conditions.

"(B) ATTENDANCE OF WITNESSES; PRODUCTION OF DOCUMENTS.—For the purpose of any investigation under subparagraph (A), the provisions of sections 9 and 10 (relating to the attendance of witnesses and the production of books, papers, and documents) of the Federal Trade Commission Act of September 16, 1914, as amended (15 U.S.C., secs. 49 and 50), are hereby made applicable to the jurisdiction, powers, and duties of the Secretary of Labor or any officers designated by him.

"(C) CERTIFICATION.—If, pursuant to any investigation under subparagraph (A), the Secretary of Labor determines that a corporation has operated in any less developed country under substandard labor conditions during any taxable year, he shall promptly certify such determination to the Secretary of the Treasury or his delegate.

"(D) ADMINISTRATIVE PROCEDURE ACT INAPPLICABLE.—The Administrative Procedure Act shall not apply with respect to investigations and determinations by the Secretary of Labor under this subsection.

"(E) TAXABLE YEARS AFFECTED.—No determination shall be made by the Secretary of Labor with respect to any corporation for any taxable year unless, during such taxable year, the taxpayer has been notified that an investigation under subparagraph (A) has begun, or is continuing, with respect to such corporation for such year.

"(F) REGULATIONS.—The Secretary of Labor may prescribe such regulations as may be necessary to the performance of his functions under this subsection.

"(4) CROSS REFERENCES.—

"For provisions relating to the authority of the Secretary or his delegate to require the taxpayer to furnish information, see subsection (a)(5) and the last sentence of subsection (c)(1)."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

SENATORS WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: Senate Office Building, Washington, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Faith or Fear

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. MUNDT. Mr. President, earlier this month, Director J. Edgar Hoover of the FBI delivered a magnificent address in the African Methodist Episcopal Church of Chicago. In his address entitled "Faith of Fear," Mr. Hoover called attention to some of the most serious and troublesome problems of our era and suggested steps which good citizens everywhere might take to be helpful in preserving the best that is in America.

Because of the importance of this address, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FAITH OR FEAR

(Address by J. Edgar Hoover, Director, Federal Bureau of Investigation, before Quinn Chapel, African Methodist Episcopal Church, in Chicago, Ill., April 18, 1960)

The honor you have conferred upon me this evening I accept on behalf of my associates, without whose dedication to duty and personal sacrifices the accomplishments of the FBI would not be possible.

My pleasure in being with you is deeply enhanced by the fact that your invitation was personally extended by Dr. Archibald J. Carey, a trusted official of our Government at the White House, and a devoted servant of God. As Chairman of the President's Committee on Government Employment Policy, he is helping to promote the basic American concept of fairness and equal opportunity for all. In this undertaking, he has the full endorsement and support of every right-thinking citizen.

It is a privilege to share this evening with the members and friends of Quinn Chapel of the African Methodist Episcopal Church. Quinn Chapel is steeped in rich tradition. This was the first congregation established by Negro Americans in Chicago and it is the city's second oldest Protestant church.

The development of the African Methodist Episcopal Church into a vigorous member of the Christian army is truly a great American story. The founder of this church, Bishop Richard Allen, was born to slavery in Philadelphia 200 years ago. Today, his name occupies a place of high and respected distinction in the annals of American history. Bishop Allen, like all other Americans who have made positive and lasting contributions to the growth of our Nation, possessed a true faith in God.

This Republic was born out of such faith held by the Founding Fathers in a Supreme Being and His divine plan. It can continue to exist in freedom only if that faith remains forthright and strong, and the voice of the people, bulwarked by intelligent and basic moral concepts, guides its destiny. Reason and patriotism are still the Republic's first line of defense in these troubled times.

The truth of these words is found time and again in the stories of the lives of great patriots from the contemporaries of Bishop Allen to the outstanding national figures of the present day. No one can dispute that deep religious conviction dominated the thoughts and actions of Abraham Lincoln, that great humanitarian and statesman whom the State of Illinois sent to the White House nearly 100 years ago. It was Abraham Lincoln who, during a time of grave peril, told the American people, "Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it." The words of our martyred President still ring true today.

As we enter the new decade of the 1960's, doubt and unrest plague the minds of people everywhere. Fear silences the voice of freedom for nearly 1 billion people who have been forced under the yoke of Communist oppression. Fear silences the voices of protest even in a certain non-Communist area in our own hemisphere where intimidation and terror at the hands of Communists and their dupes is the ruling force. And fear silences the voices of decency in many communities across the United States where racketeers—often posing as officials of industrial, labor or political organizations—use strong-arm tactics and lawless economic pressures in their lust for profit and power.

The crime syndicates, the ruthless mobsters, the lawless legions that infiltrate legitimate businesses, unions, political organizations, and government constitute a deadly enemy to our society. They use every type of terrorism, force, and trickery to suit their sinister purposes. These parasites are a shame to our Nation as well as to our honest law-abiding businessmen and labor leaders. They are a blight on every taxpayer.

The two greatest problems confronting the law enforcement profession today are presented by those persons who, through indifference or fear, fail to carry out the responsibilities of good citizenship—and by those who complacently tolerate explosive social conditions in their own back yards. Where moral issues are concerned, there can be no compromise. Too many apathetic persons are unwilling to take an active part in the clearance of moral slums. Righteous anger is an inevitable ingredient of a truly noble life. Supine indifference always is a sign of moral deterioration.

Either we display the courage and determination to actively uphold our God-given heritage of freedom and decency, or we surrender ourselves to an evil cause. If the values we profess to hold dear are to be protected and nurtured, we must have a rebirth of faith and belief in their worth.

In the fight against crime and subversion, a critical need exists today for all of us to share Abraham Lincoln's faith "that right makes might" and to dare to do our duty as we understand it.

We, the American people, are confronted with a very serious era of criminality. Each time the clock ticks off 20 seconds, another serious crime is added to the Nation's total. A murder, forcible rape, or assault to kill is committed every 4 minutes. There is a burglary each 46 seconds; a robbery each 7 minutes. More than 30 automobiles are stolen every hour.

During the past decade, the Nation's crime problem has grown four times as fast as our increasing population. Despite the best efforts of law enforcement agencies, day by day our vast criminal army continues to grow.

In terms of dollars and cents alone, crime exerts a tremendous burden upon all of us. The Nation's annual cost of crime now totals $22 billion—the equivalent of $128 for every man, woman, and child. For every $1 contributed to churches, $9 goes to crime. And for every $1 we spend on education, crime costs us $1.11. We cannot afford a $22 billion a year tribute to the barons of the underworld. We need funds for churches, homes, schools, and defense purposes.

But by far the greatest tragedy in this appalling crime picture is the role played by our youth. Teenage hoodlums—too long and too often shielded under a cloak of considered leniency and incredible tenderness—constitute a critical threat to decency and personal safety and, more seriously, to the future of our country.

During the past 5 years, arrests of persons aged 10 through 17 have increased 50 percent. Today, youthful offenders account for one-fourth of all the arrests for robberies, one-half of the burglary and larceny arrests, and two-thirds of all automobile theft arrests. No generation has ever before witnessed such extreme sadism, sacrilege and senseless brutality as that practiced by the young thugs who have turned their backs on God to join a surging juvenile underworld.

There can be no worse indictment of adult society than facts such as these. America's juvenile criminality is directly traceable to the failure of adults to meet their obligation to train young people for their rightful responsibilities to society. Obviously, the basic needs of thousands of young peope have not been met. In almost every instance, primary responsibility rests with the parents. Healthy homes do not produce morally sick children such as the ruthless young muggers, brawlers, and rapists who terrorize entire sections of our cities.

The solution to your youth problem does not lie in the unrealistic approach which is followed in many communities. Pampering and overprotection, whether practiced in the home or the courts, do not educate a child to respect the law or the rights of others. Vicious young criminals must be required to face moral and legal responsibility for their acts of violence. Youthfulness is no excuse for brutality and lawlessness.

For many years, we have seen the advocates of soft justice, the coddling of youthful criminals, and easy clemency gain more and more control in high places. Now we can see where they have brought us—to an avalanche of crime and terror which threatens decent citizens everywhere.

The soft approach to juvenile treatment sponsored by many well-meaning but misguided sentimentalists is becoming more and more damaging to our moral fabric and to lawful authority. There is no justification for treating those on the threshold of legal maturity as if they were prankish children when they commit vicious crimes.

Juvenile delinquency and its inevitable road to more serious crime is our greatest tragedy because young people are the Nation's most important asset and its greatest investment. Our hope for the future rests squarely in their hands. Either we imbue the younger generation with the faith and moral courage to resist all forms of indecency and lawlessness, or the United States is destined to fall from its pinnacle of leadership into the ranks of other nations, once great, which have crumbled from within.

Morality cannot be maintained without religion. The Holy Scripture gives us our guide: "The people that do know their God shall be strong, and do exploits."

Faith in God is the time-tested armor which neither crime nor subversion nor any other form of moral debauchery has been able to penetrate. That is why you will not find a man who truly believes in God among the vast legions of America's criminal and subversive enemies. And tht is why you find such intense fear and hatred of our Judaic-Christian principles among the peddlers of atheistic communism.

In the past four decades we have seen the forces of international communism reach out from the Kremlin to threaten all nations of the world. Today the Communists control approximately one-fourth of the earth's land surface—an area inhabited by nearly 1 billion people. And the ultimate goal of communism is to dominate the entire earth.

International communism is the vilest form of atheism ever devised by the mind of man. It is completely unrestrained by moral considerations. Its methods are lies, immorality, treachery, and deceit. Its agents are the almost 35 million fanatics who comprise the 83 Communist Parties throughout the world today. Here are the legions from which world atheism draws its strongest support.

Last year the official Soviet newspaper Izvestia openly declared: "The narcotic of religion must be combated with skill and persistence. Our ideology will never compromise with religion." These same views are shared by the Communist Party, U.S.A., a group of fanatically pro-Soviet conspirators led by a Moscow-trained ex-convict who constitute the largest subversive organization in our Nation today.

Despite the party's public record of treachery, deceit, and inhumanity, tolerance of the danger of communism continues to grow. Today, those of us who actively oppose the subtle tactics of the Communist Party find ourselves subjected to mounting abuse and ridicule. Misguided and ill-informed persons, posing as alleged experts on Communist subversion, would have it believed that the party is a shattered, broken and threadbare group of harmless misfits. Nothing could be further from the truth.

The war between communism and the free world is not fought with bombs or other tangible weapons. It is being fought now by subversion through the medium of ideas.

It is not an accident that the greatest concentration of Communist workers has been found in three fields—education, unions, entertainment. These are the areas where ideas flourish and thinking patterns are formed.

The Communists are not the only purveyors of an alien ideology in our midst. Nor are they the sole subversive element which seeks to capture the minds of America's youth.

In recent months, still another dangerous threat against decency and life has asserted itself with renewed vigor on the American scene. I refer to the hate groups, the rabble rousers and other lawless elements which have dedicated themselves to maligning, intimidating and terrorizing vast segments of our population.

Prejudice and intolerance, hate and fear, are a disease as infectious as a virus. The general increase in organized prejudice is most disturbing. It includes anti-Protestant, anti-Catholic, anti-Jew, and anti-Negro individuals and groups. These merchants of hate, slander, and insinuation clutter the mails with their obscenity. Some of it falls into the hands of impressionable juveniles, neurotic dupes and moronic adults who then resort to smearing and damaging churches, synagogues, schools, and homes.

All the various forms of the virus of bigotry exist, either dormant or active, in every community—large or small.

These elements have hurled a critical challenge at the law enforcement profession and other forces for decency across the Nation. The person who would bomb a school, desecrate a house of worship, or spread the doctrine of hate toward his fellow man constitutes a real threat to our American way of life. He lives in a vacuum of moral degeneracy. His crimes are so outrageous it is unthinkable that anyone except the extreme lunatic fringe could rationalize or condone them.

Invariably, these hatemongers attempt to drape themselves in a cloak of patriotism, but their real objective is to destroy the very American ideals which they claim to uphold. They preach mobocracy—disrespect for the law, for our Constitution, and disregard for the welfare of others.

I place the fiery cross of the vicious Ku Klux Klan in the same category as the swastika of the Nazis and the godless hammer and sickle of atheistic communism. All ignore the rights of everyone to life, liberty, and the pursuit of happiness.

All right-thinking citizens know that there is no place in America for vigilantes, rabble rousers, the lunatic fringe and those who make a profit—political or material—out of merchandising prejudice.

No problem is so acute, no crisis so severe, that terrorism can be tolerated in our society. Intimidation and mob action are not the American way—nor are they God's way—of accomplishing any objective which is truly worth while.

The best answer to the outrages perpetrated by these elements is effective action within the local community. No human force is more powerful than the indignation of a free and God-fearing people. Throughout our Nation's history, this fact has been proved over and over. In President Lincoln's words, the real strength of America does not rest in the Government but in those citizens who dare to do their duty as they understand it.

We must be ever alert to the evil influences of groups which spread hatred and bigotry. We cannot have full citizenship for some and part citizenship for others. We must all work together to dispel intolerance and promote brotherhood among all men.

America was carved out of the rugged wilderness by the heroic efforts of men and women who made great sacrifices that they and those to come after them might live in freedom under God. Faith, courage, devotion to a noble cause: These were the driving forces which spurred the early settlers to blaze new trails through virgin forests, across uncharted mountains, into valleys where civilized man never before had trod.

Our forefathers had a great vision of a nation where men could live together and worship together without fear. Today, we hold this same vision for the future—the faith and determination to insure that America remains the beacon of freedom and promise for the oppressed peoples of the world.

Freedom is not the absence of discipline but the use of disciplines which will enable us to enter into our inheritance and accomplish our destiny.

When man surrenders his ideals, he dies spiritually. Only by protecting America's God-given heritage of liberty and justice for all can we preserve this Republic for generations yet to come to live in "freedom's holy light."

Comprehensive Planning Project Called Unusual

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of this body to the following news story from the Madras (Oreg.) Pioneer, a weekly newspaper in my district. The study reported on is, as far as I know, unique in character. It is not only vital to the Warm Springs Indians, but, as is pointed out in the story, may well furnish a yardstick for future work with other tribes. The problems that face the Warm Springs Indians are not unique, but similar to problems facing Indians on other reservations across the Nation. This pioneer study thus has importance far beyond the confines of the Warm Springs Reservation and the State of Oregon.

The story follows:

[From the Madras (Oreg.) Pioneer, Apr. 7, 1960]

COMPREHENSIVE PLANNING PROJECT CALLED UNUSUAL

When the tribal council of the Warm Springs, Oregon's last intact Indian reservation, signed a $100,000 contract with Oregon State College 1½ years ago, it launched a developmental study unique in the records of both American Indian tribes and American colleges.

There are hard fiscal facts back of the decision of the tribal leaders to invest a large amount from their people's share in the Celilo Falls fishing settlement in this comprehensive planning project. Population on the reservation is climbing almost twice as fast as in the rest of the State. (From about 800 in 1938 to 1,465 on tribal rolls this year.) As it climbs and as the profit from the reservation's main source of income, timber, grows less, annual per capita payment was $1,100. This year it is $900.

DEATH RATE

While the reservation death rate of 20 per 1,000 is more than twice that of the 9.1 in the State, the birth rate more than makes up for it—40.2 compared to the statewide 22.9. Where 50 percent of Oregon's population is 35 or younger, on the reservation more than 50 percent are 25 or less.

This unpublicized action research project in the shadow of Mount Jefferson is dramatically different in that a key assumption was that human factors were as important or more important than the agricultural, industrial, and natural resources planinng. To this end, the man chosen to head the study, Dr. Norman McKown is a social psychologist by training, and the staff working with him has included 25 from virtually all departments of the college.

RECOMMENDATIONS DUE

It is different in the college's written as well as moral commitment to follow through with help to the Confederated Tribes of the Warm Springs after the recommendations are in next fall.

In the Portland office of the Bureau of Indian Affairs, the area director, Don Foster,

said he knew of no other Indian tribe which had attempted anything quite like this liaison with a college. Most such developmental inventories are short time, hot-shot appraisals, he said, that find their way into the tribal archives and die there.

"The slow, patient process of bringing the Indians themselves into the planning so that they understand the recommendation," he said, "sets this study apart * * * it is a yardstick by which we can plan work in the future with other tribes."

PARK AREA FOUND

A sidebar of the study has been the discovery of a magnificent wilderness park area on the reservation near Madras—1,100 acres virtually unknown even to the Indians themselves.

This is the only mountain scenic area left in the Cascades that is not tied up with the national parks or Forest Service and thus is open for private recreational development. For the Warm Springs, it could be like finding gold at the grassroots, according to Paul Tschirley, of the OSC natural resources staff. The area is north of Mount Jefferson, bordering on the Forest Service's Jefferson Wilderness Park. Tschirley called it a fantastic natural complex of Alpine and sub-Alpine terrain.

REPORT IN JULY

The council of the Confederated Tribes (the reservation includes Waco and Paiute as well as Warm Springs Indians) will receive the exhaustive OSC report in July, and Dr. McKown and his associates will spend 2 full months holding explanatory meetings with the Warm Springs people.

"It is our philosophy to get the results used," Dr. McKown said. "This is a joint project; the work of the college will be of no use to the Warm Springs people unless the people themselves are ready to use it."

Science, Technology, and National Security

EXTENSION OF REMARKS

OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Science, Technology, and National Security," which was delivered by a friend of mine, who is a very distinguished American, before the Senate Subcommittee on National Policy Machinery, on April 25. The gentleman to whom I refer is Dr. James A. Perkins, vice president of the Carnegie Corp., and his statement was delivered before the subcommittee headed by the distinguished junior Senator from Washington [Mr. JACKSON]. Dr. Perkins is a distinguished scholar in his own right, and presently he is an adviser and consultant to the Research and Development Board, of the Department of Defense.

I believe that the statement which Dr. Perkins delivered before the subcommittee deserves careful study by all Members of the Senate, because of the importance of the suggestions he made.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SCIENCE, TECHNOLOGY, AND NATIONAL SECURITY

(Statement by Dr. James A. Perkins, vice president of the Carnegie Corp., before the Senate Subcommittee on National Policy Machinery, April 25, 1960)

Science and technology are the real revolutionaries of our time. Together they have helped to spawn the industrial revolution that is the hallmark of the modern state—a revolution still in progress. Together they have also helped to revolutionize military weapons and military policy. And both the industrial revolution and current military requirements have, in turn, placed increasing pressure on science and technology for further invention and engineering capability. The response has only served to produce still further requirements. We live today in the midst of this accelerating cycle and it is wise and proper that this committee give the most serious attention to its impact on our national security policies.

It should be stated at the outset that we are dealing with problems of enormous importance and complexity. There are no simple formulas for their solution. We are concerned with nothing less than our organized response to the most central problems of our century.

Let us now turn to the specific features of this technological revolution and to the problems it has created for national security planning. The central fact is that scientific invention has largely conquered the three historical barriers to the application of force—namely, barriers of power, distance, and time. Decades of quiet research in a dozen different countries slowly and methodically put together the puzzle of the atom. This knowledge has been engineered to produce a weapon no larger than a compact car that can obliterate a city in one blow. And even greater power is in immediate prospect. We are almost at the point where our conquest of power raises some real questions as to what to do with it. In any event, power is certainly no limiting factor in weaponry or strategy.

On another scientific front, scientific research of recent decades into the nature of heat, electricity and aerodynamics has provided the scientific capability that has conquered the factors of time and distance through the jetplane and the intercontinental ballistic missile. And who knows what capabilities will develop out of the orbiting satellite combined with even more powerful fusion weapons? But it is clear that these systems that can deliver almost infinite power anywhere in the world in a relatively few minutes have finally mastered the traditional barriers of power, time, and space. We shall see in a moment how this conquest has profoundly altered the very nature of our national security programs and our established systems for devising these programs.

But before we deal with this issue, we must register several other conditionary factors that are prime determinates of the management and shaping of national security policy.

The conquests of power, distance, and time have not been purchased without a price. The complexity of weapons, their early obsolescence as new invention piles on new invention, the geometric increase in cost, the multiplication of systems as new technology opens doors to new capabilities—all these interlocking developments have required a major realinement of public expenditures. As research ideas grow to prototypes, to production orders, to established weapon systems—costs rapidly increase from thousands to billions of dollars. And, by definition, a program that will cost a billion dollars involves a high-level policy decision. Thus, the process itself has forced research projections up to the level of high administrative concern.

The two derivative consequences of this cycle have been the injection of scientific considerations into our basic plans for national security. The other derivative has been the importance of the scientist and his output to the future growth and security of our country.

Let us summarize the points already made before we proceed further. Science and technology have through research and engineering invention produced weapons that can place almost unlimited destruction anywhere in the world within minutes of time. These weapons and the military requirements they have produced are responsible, on the one hand, for profound instabilities in our relations with the U.S.S.R. and the rest of the world, and, on the other hand, for profound instabilities in our domestic economic and political arrangements and allocations of resources. Our response to both types of instabilities has been to return to our scientists for assistance that will produce stability. And, finally, we have found it necessary to plan our future by anticipating likely problems and making sure the connected pieces of the puzzle, both foreign and domestic, will fall in place at the right time and with the right effect.

And now to our most central question—has our planning for national security programs kept pace with the driving factors just described? Since Americans are never satisfied with the adequacy of their social arrangements, it will presumably not be out of order to suggest some directions which might lead to improvement. I obviously cannot do more than suggest three or four specific areas of concern. I will leave any reference to the National Security Council until an executive session at the end of my testimony.

I. The global sweep of modern weapons makes it clear that foreign policy and military policy are inextricably linked. And yet there are few indications, indeed, that this fact has influenced either the organization or the procedures of the Department of State. There is no high official in the Department who has these considerations as his specific responsibility. There is no counterpart to an Assistant Secretary of Defense for International Security Affairs. There is not, as far as I know, any regular briefing of the top officials of the Department on the military component of our foreign policy. Junior officers do not attend military staff colleges in any significant numbers. If the military component is a decisive ingredient, there are few visible indications that the State Department has taken appropriate steps to develop the necessary internal expertise.

It is not an adequate reply to say that this marriage takes place at the summit of the Government. Coordination at the top of two hierarchies will never produce real fusion of policy without adequate preparation for that fusion from the first steps in the process of policy formation. Or to put the matter another way, State policies that take little account of military considerations until they reach the top may suffer from unrealism. Clearly, the same organizational attention should be given to military considerations as is given to economic factors. The latter were introduced into the Department several decades ago and are now dignified with an Under Secretary for Economic Affairs. Does the military component deserve much less significant treatment?

This is no academic point because there is abundant evidence that the absence of this

expertise has in the past presented some acute practical difficulties. The doctrine of massive retaliation as an automatic reply to any Russian aggression seemed to ignore completely the existence and implications of a Russian strike capability. Early statements about our interest in southern Korea might have been differently phrased with a better understanding of the military importance of southern Korea to the defense of Formosa and Japan. The case for greater organizational attention to military considerations within the Department of State is fairly conclusive—both in principle and based on actual experience.

Several recommendations on this front worth considering might be:

1. Regular scheduled military briefings for all officers of the Department, from Department Chief on up.

2. The appointment of a civilian officer for military affairs at the level of Assistant Secretary.

3. At least two dozen middle grade officers a year should be assigned to the National War College for their regular program of courses and instruction.

4. Consideration might be given to develop the appropriate relations with a semiprivate research organization like Rand to secure appropriate assistance in the analysis of the military and strategic considerations involved in various foreign policies.

5. As a general objective, the Department should have the same level of expertize in military affairs as does the Defense Department in political and international affairs.

II. Just as modern weapons require military knowledge in the State Department, modern weapons and derived modern strategy have made largely obsolete existing organization in the Pentagon. If anything is clear, it is that modern warfare does not divide itself up into problems of land, sea, and air. Weapons have made the globe one large integrated battlefield and strategy; tactics and the organization to support these must recognize this fact. Functional tasks now divide along lines of strategic deterrence, limited warfare, continental military defense, civil defense, and military assistance to allies in support of the above. The hard, unvarnished truth is that it has been imposible to assign tasks on a functional basis along existing service lines.

We have really known this, but tradition, requirements of service morale, and plain inertia have kept us from making the necessary hard decisions to really unify the separate services and to create an organization in accordance with the tasks to be performed. Not willing to do so, we have tried to solve the problem by leaving the services intact and by loading additional paper authority on the office of the Secretary of Defense. It has come as a surprise to no one that the rationalizing of land, sea, and air services with modern functions of strategic deterrence, limited war and continental defense has not come off. We have plainly expected the impossible from the Secretary of Defense, who could not succeed if he were the most skilled political parliamentarian and experienced manager of military programs on earth. But actually we have tried to resolve the irresolvable through the administrative skills of government officials whose first government experience of any substantial magnitude started the day they walked into their new office in the Pentagon. The present Secretary of Defense is a happy reversion to the tradition of Forrestal, Marshall, and Lovett, which assumed that some prior experience would be useful.

This formula for resolving the problem of service divisions and functional tasks has also complicated the business of making the best use of our scientists and engineers. Bush's dream of an integrated research and development program has, at least until recently, fallen on the rocks of service rivalries and the operating weakness of the office of the Secretary of Defense. I am told there is currently a warm and relaxed working relation between Herbert York and his equivalent in the three departments. The basic structure will require solid proof of miracles accomplished before I can believe that the ability and above-service orientation of the present research and development managers have surmounted them.

Vivid memories linger of research demonstrations of air defense systems that were supposed to be 99 percent foolproof and strategic systems that drop bombs with pinpoint accuracy. The service missions they served had a profound influence on the point of view and led us into untold expenditures on marginal systems.

III. A third concern has to do with the role of the scientist himself. We have seen how his services have become of decisive importance at all stages of the development of national security policy. My point is that he is in danger of being both underused or overused. He will be underused when he is placed in a Government laboratory and given detailed instructions and blinders and told to solve the problem, please. Experience has long since demonstrated the value of an arms length arrangement that makes it possible for a scientist to bring to bear his creative imagination on a widely and lossely defined problem. Scientific laboratories under military direction have frequently not prospered. On the whole, a civilian management is preferable and, on the whole, the more creative the approach required, the more substantial the case for putting the scientist in a university environment on a contract arrangement.

But he can be overemployed, too. As the man with the answers to our deepest fears we are inclined to translate important special authority into authority in general. A specialist on atomic energy does not necessarily speak with equal authority on infrared devices or jet propulsion. Even less does he speak with authority on problems of strategic deterrence or on the outcome of the cold war. We are in some danger, it seems to me, of repeating the mistakes of the thirties when the fears of depression produced an overvaluation of the general skills of the economist. The scientist like the economist has special skills of greatest importance. But only when they have, through experience or unique training, translated themselves into generalists should they be allowed to have a decisive vote in the public processes. It is no accident that two great and effective men, Killian and Glennan, did not come to their substantial administrative tasks directly from the laboratory.

IV. Finally, this problem points up the long range importance of an educational system that identifies, respects, and cultivates scientific talent. Real talent, creative talent is our most precious commodity. Unless it is forthcoming, all other arrangements for its better use are only arrangements. It follows, therefore, that the most decisive element for the long run in the whole complex of national security is the best possible educational system. Impoverish this and we are doomed.

But three specific tasks devolve on our educational system if it is to give the broad support required for the complex management of our national security affairs.

First, as suggested, our program of scientific education must be of the best. This is not now the case. For details I refer to the statement by the President's Science Advisory Committee called "Education for the Age of Science" and published last May.

Second, our future scientists must receive a thorough grounding in the social sciences and humanities for the simple reason that, as the revolutionaries of our era, they should be acquained with the society they are helping to change. They must also be in a position to speak the language of the generalists and administrators who will become increasingly interested in their work.

And last, but far from least, we must make heroic efforts to raise the whole level of scientific understanding of the general citizenry. In a democracy scientists and engineers can probably go no further than the enlightened public will understand and permit. The two worlds so graphically described by C. P. Snow must be united or at least adequately bridged if we are to survive as an effective, dynamic, and secure society.

Senator Mundt's Labor Record

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. CASE of South Dakota. Mr. President, an article published in the April 1960, issue of Partners magazine discusses the role played by my colleague, Senator MUNDT, in enacting labor legislation.

It now appears that his efforts aimed at insuring freedom in labor unions and protecting the rights of workingmen are to be misinterpreted in a massive campaign designed to defeat him in the coming election.

Partners magazine deplores such tactics in view of his record in this field.

I ask unanimous consent that this article be printed in the Appendix of the RECORD in order that the real facts about Senator MUNDT's record may be better known.

There being no objection, the article was ordered to be printed in the Appendix of the RECORD, as follows:

WASHINGTON MEMO

MUNDT AND CURTIS ARE CHIEF TARGETS

Aware of Senator MCCLELLAN's undisputed strength in Arkansas, enemies of the act are placing chief emphasis on Senators they feel they have the best chance of defeating: Senator KARL E. MUNDT, of South Dakota, and Senator CARL T. CURTIS, of Nebraska.

Records show that Senators MUNDT and CURTIS have done as much to protect the businessman, the rank-and-file worker and the public from racketeers in the labor movement as have any men in Congress. It is the labor racketeers who has most to gain from their defeat, and the curious thing is that union leaders who themselves are not racketeers and who proclaim their desire to clean up the labor movement from within should join forces—as many of them appear to be doing—with their less wholesome brethren to punish two of the truest friends an upright labor movement has ever had.

OPPOSITION MAY PROVE HELPFUL

Perhaps, however, such opposition will turn out to be healthy and act as a support, rather than a detriment, to the Senators in question. The mail that is reaching members of the House whom Teamsters Boss Hoffa is openly out to get seems to indicate that a cross section of the voting public are well aware of who's who in the labor picture and that the character of a candidate can also be judged from the character of the people who oppose his election. In this connection, it was not without significance that

recently in New York, when Hoffa summoned his faithful to Madison Square Garden to hear his political dictates, he spoke to a half-filled auditorium—to roughly 8,000 teamsters out of a total local membership of upwards of 150,000.

Not only was the rally a weak one attendancewise, it can also be safely assumed that a fair proportion of the final audience were on hand more to see with their own eyes a notorious union figure than to take notes on what candidates he wants defeated. Thus, as the editor of this magazine has stoutly held over the years, it is one thing for a labor leader to shout his ability to "deliver the labor vote" and another thing to control the minds of his constituents—and if this be true in Madison Square Garden it is doubly true in a public election, where ballots are secret and the coercions of union bossism are unable to squeeze into the voting booth.

SENATOR MUNDT CARRIES ON

Meanwhile, "even in an election year," Senator MUNDT continues to serve what his conscience tells him is American labor—the workers who toil in industry and shoulder the cost of unionism, both good and bad, not the leaders who seek to make of the labor movement a private estate.

Already the author of that portion of the Landrum-Griffin Act which requires that the election of union officers be on a two-party basis fully protected by a secret ballot, accredited polls watchers, etc., he is now interested in extending the principle of full democracy to the casting of strike votes, in line with Editor Frank's proposal outlined on pages 37 and 38 of the present issue of Partners.

The word is, as of this writing, that Senator MUNDT has taken this proposal in hand and is developing a bill that will cover its salient points. As soon as the bill is in final legislative form it will, as we understand, be put in the hopper for early reference to the Senate Committee on Education and Labor. Such, in all likelihood, will have been accomplished before this issue of Partners is off the press.

Behold, then one who is proud to stand on his principles—whether this be an election year or not.

A Realistic Appraisal

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the April 22, 1960, edition of the Eugene (Oreg.) Register-Guard. In my opinion the editorial neatly sums up some glaring flaws in the U.S. foreign policy.

I only hope the warning it contains—"Someday, if we get hurt badly enough, we'll learn how to give back the diplomatic fraternity pin" does not have to be validated again and again and again.

OUR WEAKNESS

Syngman Rhee is no rose. Neither are Chiang Kai-shek, Franco, nor a basketful of Latin American dictators. Yet, in the eyes of too much of the world, these are "Uncle Sam's picked people." And there is some truth, too much truth, in this view of repressive dictators who seem to be in orbit with the United States.

How do we get ourselves into such company?

Part of the fault, it seems to us, lies in an American naivete. Right now we're sore at Communists. So are Rhee, Chiang, Franco, and some Latin American strong men. We reason that anybody who dislikes the same people we dislike must be a stout fellow, indeed. So we support our enemies' enemies.

We did that in World War II. We were mad at the Germans. The Russians were mad at the Germans, too. So we went into a national hysteria about what brave, noble patriots the Russians were. We didn't look beyond their anger at our common enemy. Now that the world situation has changed we buddy up to anybody who is disenchanted with Communists.

Another American failing is that we've never learned how to stop going steady. We cling to people like Rhee long after we've learned that he is not as he was advertised. Someday, if we get hurt badly enough, we'll learn how to give back the diplomatic fraternity pin.

Every Day Loyalty Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial with reference to Loyalty Day on May 1, which appeared in the National Tribune-The Stars and Stripes, on April 28, 1960:

EVERY DAY LOYALTY DAY

Before his departure on his goodfellowship world tour, Commander in Chief Louis G. Feldmann of the Veterans of Foreign Wars designated the week of May 1–7 as National VFW Week. This will be the ninth annual observance of such a week by the VFW.

In his message to the membership, Commander in Chief Feldmann also points out that the first day of National VFW Week falls on May 1 which is also observed as Loyalty Day throughout the United States.

May 1, or May Day, as we may have pointed out at some earlier date, was the day when the Reds of Europe chose to march and display their strength and their disregard of all that we hold dear here in the United States—all things which are dear to the hearts of all free people.

The word "loyalty" has been defined in various ways but we like to think of it in the terms expressed by Oliver Wendell Holmes, the old "autocrat of the breakfast table" when he wrote:

"Wake in our breasts the living fires,
The holy faith that warmed our sires;
Thy hand hath made our Nation free;
To die for her is serving Thee."

It is interesting to note that Loyalty Day as conceived by the Veterans of Foreign Wars back in 1952 was welcomed wih enthusiasm by the people of the United States and State after State, through their Governors, proclaimed that May 1 of each year be regarded as a day when the citizens of the United States should demonstrate that the spirit of our Founding Fathers had not been forgotten and present themselves in a nationwide showing that our people still remembered the fundamental principles upon which the United States of America were based.

The VFW idea of Loyalty Day was so well accepted that on July 18, 1959, a bill was signed by President Eisenhower proclaiming May 1 of each year Loyalty Day. After 7 years of local observation the day was made official.

As we have said, the word "loyalty" has many definitions. It might mean constancy to a superior, adherence to a firm belief—religious or otherwise, faithfulness in love—but we believe that when the Veterans of Foreign Wars first suggested the observation of such a day they were thinking, primarily, of loyalty to country.

It is for that reason that we have quoted the lines from Oliver Wendell Holmes which appear in this editorial and which we feel truly express that love of country which should fill the heart of every citizen.

We realize that outward expression of love of country is becoming a bit on the old-fashioned side. We do not believe that our people as a whole are less loyal to the tenets of their ancestors but we do feel that they fear to express themselves in this regard lest they be regarded as out-of-date "squares" in the language of the day or "sick," which appears to be the ultimate in scorn which our young people use in describing what, perhaps, in their upbringing, they do not understand.

On the contrary, we do not agree that an expression of love of country is square or sick but a demonstration of belief in the reasons which have made this country one of the greatest on earth.

Firm in our belief in the greatness of our country we only wish that every American citizen might be treated to a sight which those living in the Nation's Capital are privileged to enjoy.

We have in mind here the Washington Monument, rising on a slight hill, but sufficiently set apart that it may be seen by every passerby and from afar, when approaching the center of the city of Washington, D.C.

Someone conceived the idea that it might be a fine thing to place the American flag, set in high flagstaffs and arranged in a circle around the monument.

The idea was put into effect only a couple of years ago but to us, as simple Americans, the sight of the Star-Spangled Banner floating in the breeze around the monument erected to the Father of our Country is a solemn, soul-stirring sight.

We have been fortunate to pass by this spectacle frequently and the sight of those flags waving in the breeze never fails to give us a thrill.

It would seem as if Nature herself had conspired to make this a sight worth while. Never have we passed the monument but we found our flag floating proudly, wafted by the gentle winds, so that each flag stood out as if proclaiming the reasons why the United States of America was formed.

It is well for us to observe Loyalty Day on May 1. It would be better for all of us if we observed Loyalty Day every day, always mindful of what our country stands for and why we should be proud of its achievements.

The Exploration of Space

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. SCHOEPPEL. Mr. President, I was privileged to hear a most informa-

tive address the evening of April 25, at the dinner of the Notre Dame University Club of Washington, D.C., given by Mr. John A. Johnson, General Counsel of the National Aeronautics and Space Administration.

This is entitled "The Exploration of Space," a subject of such keen and compelling interest that I ask unanimous consent for it to be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EXPLORATION OF SPACE

(Address by John A. Johnson, General Counsel, National Aeronautics and Space Administration to the Notre Dame University Club of Washington, D.C., April 25, 1960)

The subject of my remarks this evening is the Nation's program for the exploration of space. It is a sign of the sophistication of our age that we have already learned to speak these words almost casually. The exploration of space. What does it mean? What does it signify for man as he enters the 7th decade of the 20th century?

It was less than 2 years ago that Congress enacted the National Aeronautics and Space Act of 1958—truly a revolutionary piece of legislation. It established a new Government agency, the National Aeronautics and Space Administration, and gave it a responsibility radically different from anything that had gone before. For thousands of years man has been devising forms of government and writing laws, but never before had he presumed to deal with the limitless reaches of outer space. Now, for the first time, a new role for Government was conceived. Now, for the first time in the long history of legislation, these words, "the exploration of space," were written into a law. After months of careful deliberation, in the spring and summer of 1958, Congress enacted a statute which directed the new agency, NASA, to conduct such activities "as may be required for the exploration of space." It became law when the President signed it on July 28, 1958. Thus the United States officially entered the space age.

I say again that this was a revolutionary piece of legislation. From man's earliest beginnings, he has been engaged in one kind of exploration or another. The very word "exploration" calls to mind some of the noblest enterprises of mankind. We think of the great voyages of discovery of Columbus and Balboa, of Magellan and Cook, and, in our own century, of Peary, Scott, and Amundsen. Man is an explorer by nature; there is something of it in each of us. Man demands that the unknown be reduced to knowledge; that the unfamiliar and remote, wherever possible, become the stuff of human experience.

It is not a new thing for governments to be concerned with exploration. Motivated by desires for trade, conquest, and colonization, many of the sovereigns of the past have engaged in the business of exploration and discovery, and nations have risen to greatness because of such activity. But in 1958, our Nation soberly and deliberately conceived for the first time that it should be an essential and continuing function of government to undertake the exploration of a boundless new realm without regard to any of the motives which have moved nations in the past to reach beyond themselves into the unknown. The exploration of space is not a national program today because it holds the prospect of new worlds to conquer by the sword; nor because it offers opportunities for colonization; nor even because of the promise of economic benefits, although these may turn out to be substantial. No, the exploration of space is a national program because at this point in history man realizes, more intensely than ever before, that knowledge is power. Today, greatness as a nation depends upon mastery and control of man's physical environment; and the extension and perfection of scientific knowledge is fundamental to that mastery and control. Man's environment is not limited to the earth; it includes the great spatial sea in which the earth itself moves. Today, man has at his disposal for the first time the tools which make it possible for him to venture forth into that great sea of space, to explore and to discover, to investigate and to learn. These tools, which future generations will doubtless think primitive, must be improved, perfected, and used in the service of enlarging the boundaries of man's knowledge. What benefits this may ultimately bring to mankind, no one today can predict, although some are already foreseeable. But one can prophesy with certainty that the exploration of space will be a great new human adventure, and one from which it is inconceivable that man will withdraw, regardless of the frustrations, the heartaches, and the costs that it is bound to entail.

In considering our Nation's space exploration program, it is well to know first of all what it is not. It is not a military program; it is a civilian program. It is not a program designed to create new and more powerful weapons or, for that matter, defense against such weapons. It is a program devoted to peaceful purposes.

The National Aeronautics and Space Act of 1958 starts out with an important declaration of national policy. It states "that it is the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind." In furtherance of this end, the Congress established a civilian agency, NASA, to be given responsibility for all of the Nation's space activities except, in the terms of the act, "activities peculiar to or primarily associated with the development of weapons systems, military operations, or the defense of the United States," which remain the responsibility of the Department of Defense. The creation of a civilian agency for this purpose was a legislative act having the most profound implications; henceforth it was to be clearly understood that the policy of our Nation is to emphasize activities in space for civilian, rather than military, purposes.

The exploration of space, then, is by law a civilian undertaking, and is to be pursued for peaceful purposes. It is the mission for which NASA is responsible under the law. And it is a mission which does not embrace the military uses of space.

Our armed services, of course, also have a clear-cut mission. That mission is the supremely important one of the defense of our Nation, and in carrying it out the military must make use of every means available to it. This includes the utilization of space whenever that medium provides the best means for accomplishing the mission of defense.

The armed services, however, are under no obligation to perform any part of the defense mission in space merely because space is now, for the first time in history, accessible to man. For the military, space is just another place, another medium, like the land, the sea, and the air, where military functions can be performed for the defense of the Nation. The military utilization of space, and the research and development effort directed by the Armed Forces toward that end, are integral parts of the total defense program of the United States. Military space projects are undertaken only to meet military requirements, and they presumably must compete in the military budget with alternative, and more conventional, means of accomplishing the same military objectives. For the military, the test must be: Is the utilization of space in this particular manner, all things considered, the most prudent way to expend our resources to achieve the best defense of the Nation?

The mission given by law to NASA, on the other hand, is to undertake the exploration of space for peaceful purposes. No qualifications. No ifs, ands, or buts. The exploration of space has been recognized by law as an end to be pursued, a mission to be carried out, for its own sake and without having to justify it either in relation to the defense of the Nation or the economic benefits which may possibly flow from it.

The exploration of space comprehends all the means of expanding man's knowledge of the space environment—by the conduct of scientific experiments in space, and by observation through the use of unmanned vehicles equipped with the most ingenious instruments man can devise. But it doesn't stop there. Ultimately, and essentially, it means the sending of man himself into space. It is the prospect of man escaping from his earthly environment that makes the whole business the most exciting enterprise of our age. It is the thought of man being projected into a totally alien environment, whether in orbit about the Earth, or standing for the first time on the Moon, or preparing to land on another planet, that stimulates the human imagination as nothing else has stimulated it since the first days of powered flight half a century ago.

If we bear these considerations in mind, I think we can see more clearly where we are going in space and why we are going there. I think, too, that we will understand better the shape and content and dimensions of our space exploration program.

Now I am not going to recount the details of what our Government has been doing in space since NASA was established, since I am sure that you are more interested in hearing about where we are going than where we have been. Each of our failures—and there have been several—and each of our successes—and there have been quite a number of these—have been duly headlined by the press around the world. It is evident to all, I think, that the pace of the program is quickening and that successes are becoming more frequent and notable than failures. I shall simply summarize progress to date by noting what we like to call the boxscore. Up to the present time, the United States has launched a total of 18 earth satellites, 10 of which are still in orbit. The Soviet Union has launched 4 and, of that number, 1 is still up. In addition, the Soviet Union has one satellite orbiting the sun, while the United States has two, Pioneers IV and V. So, I think that we can all agree that the boxscore looks pretty good. In addition, it is fair to say that the volume of useful scientific information which has been published as a result of U.S. launchings to date substantially exceeds the Soviet output.

As all of you know, the past several weeks have been a period of particularly intense activity on the part of the United States in exploring space. I will mention only two of our recent successes, Tiros I, launched on April 1, 1960, which has produced a remarkably fine batch of photographs of the earth and its cloud cover, and Pioneer V, launched on March 11, 1960, which is now orbiting the Sun between the Earth and Venus. Early this morning Pioneer V passed the 6-million-mile mark on its journey from the earth, and its messages are still being regularly received. In the next few weeks, it is probable that a command will be sent to Pioneer V to turn on a more powerful 150-watt transmitter which, if successful, could make it possible for scientists to remain in communication with it for a distance of 50 million miles or more.

I cite these two instances of Tiros I and Pioneer V as evidence of the richness and diversity which characterizes our space ex-

ploration program. In addition, in just another 10 days, if all goes well, another launching will take place which promises to be a dramatic first in space. On May 5, NASA plans to launch from Cape Canaveral a 100-foot inflatable sphere for use as a communications satellite. The sphere, made of a very light plastic, coated with highly reflective aluminum, weighs only about 150 pounds. When launched, it will be folded into a spherical container about 2 feet in diameter. It will be aimed for going into orbit about the earth at an altitude of about 1,000 miles. At this point, the container will be opened by an explosive charge. In the vacuum of outer space, the sphere will inflate rapidly as the result of expansion of a small amount of air trapped within it. Inflation of the sphere will be maintained in outer space by evaporation of about 30 pounds of a sublimating powder. The fully inflated sphere, if it were resting on the ground, would be about as high as a 10-story building, almost as large as any office building we have in Washington.

The objective of this experiment, which we call Project Echo, is to test the feasibility of a satellite communications system on a global basis. The vapor-deposited aluminum skin of the big satellite will give it a high degree of radio-wave reflectivity. After it is placed into orbit, NASA hopes to establish radio communication between the east and west coasts of the United States by bouncing signals off the 100-foot sphere. Such satellites may some day be used as relay stations for transmission of telephone and telegraph messages and even worldwide television.

Incidentally, launching of the sphere is planned for a time of day so that it will remain in continuous sunlight for about 2 weeks. It will circle the earth every 2 hours and should be easily visible to the naked eye, having a brightness comparable to that of Vega, one of the brighter stars in the heavens. Quite aside from the practical benefits it promises, it should be a thrilling new celestial phenomenon.

With all of this activity going on, why do we still hear talk about the so-called space lag, and the alleged superiority of the Soviet Union in space? Before attempting to answer this question, we shall have to take a look at one of the major elements of space technology.

First of all, before we can think seriously about doing anything in space we must have the means of propelling a useful object, such as the Tiros satellite or the manned space capsule which the Mercury astronauts will ride, from the earth into outer space. The propulsion and guidance systems necessary to put a spacecraft into orbit about the Earth or into a flight path toward the Moon are combined in what we call launch vehicles. In front of me here today are models of the launch vehicles currently used and several that are planned for the future. Up to the present time, the launch vehicles which we have used in our space exploration program have largely employed rockets developed for use in our ballistic missiles, the intermediate-range Thor and Jupiter and the intercontinental-range Atlas. The Russians likewise have been able to use rockets developed for their long-range ballistic missiles. Theirs are presently more powerful than ours, and there is a simple historical reason for this. I feel it is so important that this be understood, that it is worthwhile for us to spend a few minutes reviewing a bit of recent history.

In the late 1940's the United States chose to continue and further develop the heavy bomber as the delivery system for nuclear weapons. At that time the Soviet Union, having no heavy bomber force nor bases from which to stage intercontinental flights, chose to build high-thrust rocket systems for ballistic missiles to perform the delivery task. Thus, they gained a head start of several years in the concentrated research and development work that ultimately led to the big rockets now being used in both the missile and space business. Furthermore, they began development at a time when the Russian nuclear warheads were very large, heavy, and relatively inefficient, and so they were compelled to develop a more powerful launching vehicle than was later selected by us. The early versions of our atomic bombs were heavy and large also, but we concentrated at that time on the manned bombers—the B–47 and the B–52—as the means for delivering our nuclear warheads. Only after we had solved the problems of producing lighter, smaller, and enormously more efficient atomic and hydrogen bombs did we start a determined all-out program to produce a rocket to carry these bombs to the target. Thus, our decision to develop rocket propelled ballistic missile systems was made only after nuclear warhead development had proceeded to the point where we could plan on smaller vehicles to deliver the same punch. This was in late 1954 and early 1955. Now, in a little more than half the time taken by the Russians, our scientists, engineers, and industrial contractors have produced the Thor and Jupiter IRBM's and the Atlas ICBM as operationally useful missiles capable of carrying to the target, with the required accuracy, warheads as powerful as may be needed. The difference in thrust between the Soviet rockets and our rockets in no way means that our ballistic missiles are inferior to theirs. As a matter of fact, it is probable that the rockets which the Soviets today possess are more powerful than they now need for military weapons purposes.

The story is different when we turn from the missile business to the space business. While our rockets can carry a warhead to the desired target with accuracy in the same manner as the Soviet rockets can, their more powerful rockets, when employed in space launch vehicles, have enabled them to achieve some spectacular feats in space which we have so far not been able to match. The Russians, with their higher thrust propulsion systems, can project into outer space more heavily instrumented payloads than can the United States.

Up to the present time, we have had to rely almost entirely upon the 150,000-pound-thrust Thor and Jupiter rockets in providing propulsion for our space launch vehicles. In only a few experiments has the United States used the higher thrust Atlas, having somewhat more than twice that amount of thrust. The Soviet scientists, on the other hand, have had at their command a rocket which we estimate is in the 600,000- to 800,000-pound-thrust range.

This disparity in thrust enables the Soviet Union to undertake very difficult space missions, some of which are completely denied to us today. Until we develop more powerful launch vehicle systems, we cannot exactly duplicate the Soviet achievements in space.

Space technology, of course, is a very complex thing involving innumerable elements other than rocket propulsion. I think it is safe to say that, in every other aspect of space technology, the United States is at least equal with, and in some cases ahead of, the Soviet Union. But this matter of total thrust in our launch vehicles is a real limiting factor for the moment.

Now you might quite properly ask what we are doing about it. The answer is, "Plenty." Both NASA and the Department of Defense are urgently engaged in developing a family of launch vehicle systems that will correct this imbalance. The family currently consists of the Scout, the Thor-Agena B, the Atlas-Agena B, the Atlas-Centaur, and the Saturn. Of these, all are NASA development responsibilities excepting only the Agena B upper stages to be used with Thor and Atlas rockets.

In comparing the expected performance of these new launch vehicles, it is necessary to use a common yardstick. This yardstick is the number of pounds of payload each of them will be capable of placing in orbit about the earth at an altitude of 300 nautical miles. Using this standard, the Scout, which is designed to be a relatively low-cost utility vehicle, will place a 200-pound payload in such an orbit; Thor-Agena B, a 1,600-pound payload; Atlas-Agena B, a 5,000-pound payload; Atlas-Centaur, 8,500 pounds; and Saturn, about 30,000 pounds. Scout should be available later this year, and Thor-Agena B, Atlas-Agena B, and Atlas-Centaur in 1961. We hope to launch the first operational Saturn vehicle before the end of 1964.

Looking further down the road, we expect to have the Nova vehicle, truly a monster, some time after 1965. The engines for Nova are now under development. Each of them will produce about 1,500,000 pounds of thrust, relatively equivalent to the entire thrust of Saturn and about four times that of the present Atlas. These tremendous engines will be clustered in Nova to produce a total thrust of 6 to 12 million pounds, conceivably as much as 30 times that of Atlas.

As the result of this development program, within the next 12 to 18 months we should have available launch vehicles that will enable us to exceed what the Soviet Union has done to date. We cannot, of course, assume that they will not progress in the meantime. So our goal cannot be merely to catch up. Consequently our highest priority project in the launch vehicle field is Saturn, which, as I mentioned earlier, will enable us to place approximately 15 tons into orbit 300 miles above the surface of the earth—a capacity of an entirely different order of magnitude from anything that has been demonstrated to date by the Soviet Union.

Aside from the development of new and more powerful launch vehicles, NASA has formulated a 10-year program of space exploration. Our scientists and engineers have told us that there are no insurmountable scientific or technical barriers to sending a man on a round trip to the moon during the 1970's. This is the presently foreseeable goal of space exploration during the coming decade, and it will shape our entire program and determine its dimensions. It is, in fact, already determining it. Project Mercury, our manned satellite project, is the first step in this direction. If all goes as planned, some time late in 1961 the first Mercury astronaut will be boosted into orbit from Cape Canaveral and will circumnavigate the globe three times in 4½ hours before returning to join his earthbound fellow men. With that event, a whole new epoch in the human adventure will have begun; and everyone, from the simplest to the most sophisticated, will know it.

Project Mercury is NASA's biggest single effort to date, and it has been assigned the highest national priority. Project Mercury relies on the Atlas booster to place a manned capsule, weighing somewhat over a ton, into orbit at an altitude of 120 miles above the earth. This is the limit of our capability for manned space flight with presently available boosters developed in the military missile programs. But the needs of space exploration obviously do not stop there. Mercury is but the first limited, though very significant, step toward our long-range goal—manned flight to the moon and the nearby planets. Present plans contemplate that several years later it will be followed by manned flights around the moon—circumlunar flights, in the vernacular of the space experts. Such a venture will require launch vehicles having many times the thrust of the Atlas.

Here is where Saturn comes in. As presently conceived, Saturn involves the clustering of eight engines of types used in the Thor and Jupiter missiles to produce 1½ million pounds of thrust in the takeoff stage. Various combinations of upper stages will be employed in the later development of this vehicle. With the anticipated growth development of Saturn, it should ultimately be capable of sending men on a trip around the Moon, and then back to the Earth.

The next stage, beyond Saturn, is a vehicle which will enable man to land on the Moon and then return safely to Earth. The development of Nova is pointed toward that goal. It is too early to predict the time when that goal will be achieved, but it appears that it will have to wait until some time in the 1970's.

The vehicles which I have described will have other uses, of course. Their tremendous weight-lifting capabilities will permit us to place large useful payloads far into space, to land robot vehicles on the Moon and nearby planets, and to place scientifically effective payloads into orbits closely approaching the Sun.

To sum up, I think we can derive much satisfaction from the solid accomplishments of the past 2 years. The box score looks pretty good. But more important is the long-term program in which we are now engaged. Our present deficiency in the weight lifting capacity of launch vehicles will, we hope, soon be remedied. I want to reiterate most emphatically that this present deficiency in no way indicates that U.S. science and technology are inferior to that of the Soviet Union. It is simply the direct result of decisions made several years ago in connection with the development of ballistic missiles for our defense.

Our long-range program is designed to achieve the goals of space exploration with the greatest speed consistent with sound scientific and technical management. While we are not engaged in an event-by-event space race with the Soviet Union, we do have a program that we are confident will achieve for the United States a preeminent position in this new business of space exploration.

The spirit of the American people is the same today as it was in the days of Lewis and Clark, of Peary, of the Wright brothers, and of Lindbergh. They will expect and be satisfied with nothing less than leadership in this new venture. If we keep our sights on the real goals of space exploration—5, 10, and 20 years ahead—and pursue them with steadfastness, we can be confident of success.

A Study Is a Study Is a Study: Positive Action Is Needed in the Field of Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the March 31, 1960, issue of the Machinist:

RUNAROUND

Eight years ago, President Harry Truman set up a special Commisison to study the health needs of the Nation. IAM President Al Hayes was 1 of the 15 members of that Commission. After a year of painstaking study with hearings in many cities, the Commission published its findings in 5 big volumes covering 1,600 printed pages. That report underscored the need for public health insurance, especially for the aged.

Six years ago, the House Committee on Interstate and Foreign Commerce set up a subcommittee under former Representative Charles A. Wolverton, of New Jersey, to investigate the people's health. Three of the seven volumes of that testimony deal with the inadequacy of private health insurance policies.

Four years ago, the Health Information Foundation published the results of its nationwide survey on "Family Medical Costs and Voluntary Health Insurance," a 251-page volume.

Two years ago, the House Ways and Means Committee asked the Secretary of Health, Education, and Welfare to study and report on the health needs of the aged. That 117-page report was submitted by Secretary Flemming in April 1959.

Last year, a subcommittee of the House Ways and Means Committee conducted hearings on the Forand bill to provide hospital, surgical, and nursing home care to social security pensioners. That testimony covers 720 pages.

This year, the Senate Subcommittee on the Aged and Aging has reported on the results of its hearings in seven cities across the Nation. Its volumes of testimony are packed with facts on the health needs of our senior citizens. Its 186-page report is backed by a 155-page appendix.

Last week, President Eisenhower let it be known that before his administration will support any bill to provide health insurance for the aged—or anyone else—he wants the subject studied.

It's like meeting yourself coming back or, as some like to call it, the runaround.

Gov. Gaylord Nelson, of Wisconsin, Calls for Sound Constitutional Reform in Wisconsin

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. PROXMIRE. Mr. President, the Governor of the State of Wisconsin, the Honorable Gaylord Nelson, has already established an outstanding record in our State, of which Wisconsin citizens in both parties are very, very proud.

Recently Governor Nelson called for a constitutional convention or, at least, for a study of the Constitution of Wisconsin, preliminary to a constitutional convention, so that our State can revise what is the oldest State constitution in America—a State constitution which has not been revised since 1848.

Governor Nelson made a very thoughtful and sound speech in connection with the matter of constitutional revision; and I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

For many years, students of government and civic-minded groups such as the League of Women Voters have tried to stimulate interest in one of the most fundamental problems in the State of Wisconsin—the problem of constitutional revision.

There has been a general feeling that the State constitution should be revised, a feeling which I share. But past efforts to achieve revision have been sporadic and have failed to muster the popular support necessary to accomplish any major overhaul of the constitution.

At the beginning of an attack upon this problem, I propose an inquiry into the basic aspects of constitutional revision. I shall today appoint a temporary commission, composed of lawyers, scholars and public spirited citizens, to make a recommendation as to the need and desirability of revising the constitution. I shall also ask this commission to make a recommendation as to the best method of achieving constitutional revision if it is found that revision is necessary.

I think that this is an appropriate time to consider constitutional revision. Each recent session of the legislature has brought a larger number of proposals for amending the constitution. I am informed that a total of 45 resolutions proposing constitutional amendments were introduced, or acted upon for the second time, in the current legislative session. Of this number, eight were given first passage and two were given second passage. If these proposals are offered to the voters, it will be the second biggest package of amendments proposed in the history of the State. Only the 1911 and 1913 legislatures offered more.

The fact that so many amendments were proposed, and so many approved, indicates that there are many legislators and citizens who believe that changes are necessary. In addition, there is reason to believe that some provisions of the Wisconsin constitution are obsolete. Another important objective of constitutional revision would be the simplification of the language of the document, for which there seems to be a clear need.

An example is section 3 of article XI, which deals with county, municipal, town, and school debt limits in one monstrous sentence 141 words long. This sentence will be further complicated by the addition of 18 words if an amendment scheduled for a vote in November is approved. Another amendment given first passage in this section would increase the length of this sentence to 216 words.

The constitution is 112 years old. It has been amended 61 times. According to a University of Mississippi study published in 1957, Wisconsin has gone longer than any other State without constitutional revision; the last constitutional convention in Wisconsin was in 1848. Most States have held constitutional conventions during this century.

I wish to say, however, that I am not of the view that the constitution should be changed just because it is old. That alone is insufficient reason for modification. And I should not advocate the kind of changes that have been made by a few States in the direction of expansion; the effort should be abridgment and clarification and to restrict to principles. The most obvious fault of State constitutions is that they include provisions that should be matters of law.

A bill providing for a constitutional study commission was introduced this session by State Senator Henry Maier. This bill was referred to the legislative council, with a directive to the judiciary committee of that body to study it. I have discussed this referral with Assemblyman Molinaro, the council chairman, and with Earl Sachse, the executive director. It is their opinion that, because of the limited time for interim studies this year, nothing will be done by the council in this area on the scale proposed here. A resolution introduced by Senator Allen Busby directing a study of the article mentioned earlier also had been referred to the council. I shall suggest to the commission

that their studies be coordinated with any that are made by the council.

I shall ask the commission to undertake, in addition to making a broad recommendation on the necessity for revision, to answer certain collateral questions. I should like answers to these:

Are there provisions in the constitution that should be statutory instead of constitutional?

Are these provisions which are archaic and which could be eliminated?

Are there ways in which existing provisions could be simplified and clarified?

Is there an advantage to a complete overhaul of the constitution, as compared to piecemeal amendment?

Is the constitution a clean-cut embodiment of public policies expressing the enduring purposes of the state?

Is there a way of revising the constitution, apart from the holding of a convention, which might be preferable?

If the recommendation of the temporary commission is to proceed with plans for a constitutional convention, I will appoint a permanent commission to gather information as to proposed changes and to compile information for use by the public and the delegates to any such convention.

The procedure for constitutional revision through convention in Wisconsin is as follows: The legislature recommends to the electors to vote for or against a convention at the next general fall election; if a majority of the voters approve a convention, the next session of the legislature is obliged to call it.

If the temporary commission on constitutional revision recommends revision by convention, the question of adopting a resolution providing for a popular referendum should be presented to the 1961 legislature. It could go to the voters in the 1962 general election. If the proposal then were approved by the voters, the convention could be called by the 1963 legislature.

An alternative method of constitutional revision is possible under our State constitution. The legislature is authorized to submit amendments to the electorate for approval, provided that each amendment is first approved by two successive sessions of the legislature. There is no limit on the number of amendments which the legislature may send to the electorate for ratification. It is possible that the commission on constitutional revision might recommend something less than a wholesale revision of the existing document. If this happened, a convention would not be necessary.

I shall have to ask the members of the temporary commission to serve without pay and even without compensation for expenses; there are no funds available for this purpose. These members will be truly public spirited citizens.

In choosing the members of this commission, I have taken pains to assure a balance of conservative and liberal viewpoints, of varying philosophies. I have sought persons of high professional qualification and good reputation, and I have asked to serve only those who signified a strong interest in the questions I have posed. I am extremely grateful for their willingness to serve the public interest in this way.

The cochairmen of the commission are Justice Thomas E. Fairchild of the State supreme court, and G. Burgess Ela, a respected Madison attorney. I have asked David Fellman, professor of political science at the University of Wisconsin and an authority on constitutional law, to serve as secretary.

The other members are Attorney General John W. Reynolds; Herbert Terwilliger, Wausau, an attorney and president of the Wisconsin Bar Association; Reynolds C. Seitz, Whitefish Bay, dean of the Marquette University law school and professor of constitutional law; Thomas N. Tuttle, a Milwaukee attorney; John William Calhoun, Fond du Lac, an attorney; Edward H. Snyder, Shorewood, an attorney; Mrs. Marshall Beaugrand, Racine, former State president of the League of Women Voters and president of the Racine Women's Civil Council; Irvin B. Charne, Shorewood, an attorney; Richard J. Gould, Green Bay, an attorney; John Conway, University of Wisconsin law professor and former revisor of statutes; Professor Willard Hurst of the University of Wisconsin law school; and William Riker, professor of government at Lawrence College, Appleton.

I leave you with this thought:

"Some men look at constitutions with sanctimonious reverence, and deem them like the ark of the covenant—too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment * * * I am certainly not an advocate of frequent and untried changes in laws and constitutions * * * but I know that laws and institutions must go hand in hand with progress."

Those are the words of Thomas Jefferson. I suggest that this is the proper approach to this subject.

Polish Constitution Day and Paderewski's Birthday

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. BRADEMAS. Mr. Speaker, this year the 169th observance of Poland's Constitution Day coincides with the 100th anniversary of the birth of Ignace Jan Paderewski, the great Polish statesman, artist, humanitarian, and lover of liberty.

The final words attributed to Paderewski before his death on June 29, 1941 were: "Polska powstanie—Poland will rise again."

Mr. Speaker, this was the noble utterance of a man who defined the realization of a free and independent Poland as "the greatest aim of my life."

The indomitable spirit of that freedom-loving country, a spirit represented by the last words of Paderewski, has not been diminished during Poland's present time of troubles.

Let us hope that the day will soon come when the seed of liberty, deeply rooted in the hearts of the Poles, will again take flower and that Poland will once more know what it is to be free.

Mr. Speaker, I know the proud courage of the Americans of Polish origin of my own congressional district. Immigrants and sons of immigrants, they have displayed the exemplary citizenship on which a democracy depends by their activity and participation in the life of their communities.

In their churches, their work, their civic endeavors, their homes and their families, they demonstrate their fine qualities of faith, devotion, industry, and self-reliance. Having observed the Polish-Americans' worthy contributions to our country, I have no doubt that their relatives and friends in Poland will ultimately enjoy the freedom that should be theirs.

I am deeply confident that in time, as Paderewski said, "Poland will rise again."

Latin American Free Trade and American Industry

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Latin American Free Trade and American Industry," written by Seymour L. Linfield, and published in the Commercial and Financial Chronicle of April 28, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATIN AMERICAN FREE TRADE AND AMERICAN INDUSTRY

(By Seymour L. Linfield, attorney at law, and president, Development Assistance Corp. (DAC), New York)

A seven-nation agreement for the establishment of a free-trade area in Latin America was signed in Montevideo, Uruguay, on February 18, 1960. Its signatories embrace 70 percent of Latin America's population, including Argentina, Brazil, Chile, Mexico, Paraguay, Peru, and Uruguay.

The almost total silence, at least until now, of the financial press of this country with respect to this treaty, is almost inexplicable. Its text, which has recently arrived in New York, merits careful consideration by American industry.

The "Latin American Free Trade Association" (LAFTA) represents the nucleus of a future Latin American common market. It is an important step toward the economic integration of Latin America, toward eliminating the economic limitations which flow from the political fragmentation of this subhemisphere.

The Montevideo Treaty is important for what it says, as well as for what it does not say. Perhaps most important, at the moment, is a clear understanding of the economic and political realities which underlie the treaty. The following initial observations are therefore in order:

I

What the treaty says

The Montevideo Treaty creates a free-trade zone covering 10 million square miles. It expressly aims to expand and diversify intraregional trade—now amounting to nearly $800 million, approximately only 10 percent of the region's total foreign trade—and to promote the complementarity of the economies of the area.

It provides for a gradual, progressive reduction of trade restrictions, on a nondiscriminatory basis, by periodic multilateral negotiations. Its obligations are directed to the liberalization of current trade, now consisting chiefly of primary commodities. Its objective is to eliminate all intraregional import duties and charges now hampering trade—whether fiscal, monetary, or exchange—within a period of not more than 12 years. It becomes effective 30 days after three nations have ratified it—with present

indications that at least Argentina, Chile, and Uruguay will ratify well before the end of the year.

II

What the treaty does not say

The treaty does not establish a common schedule, and does not irrevocably commit each signatory to include all of its goods within the common schedule. It does not apply to existing contracts relating to oil or its derivatives. It does not expressly apply to new products, although the door is wide open for the use of this preferential instrument, if the signatories so desire, for the development of such trade. It does not establish intraregional convertibility or a uniform system of trade payments. It does not establish a uniform code for foreign investment in the area.

III

The political consideration which generates a Latin American free-trade area

LAFTA is powered by the increasing realization throughout Latin America that the major economic problem of the region is its massive poverty; that countries with primitive techniques can become powerful industrial complexes; and, that poverty can be eliminated in generations by such rapid industrialization. The problem of increasing the per capita rate of economic growth exists within the frame of a Latin America which will have in 1975 close to 300 million people (probably exceed 450 million by the turn of the century), as against 193 million today. (The 1975 market, incidentally, will be as large numerically as the present aggregate population of the United Kingdom, France, the Federal Republic of Germany, and the Benelux and Scandinavian countries.)

IV

The economic necessity for a Latin American common market

The 1945–55 growth of the Latin American per capita product was 2.7 percent annually; between 1955–59, no more than 1.2 percent. There is widespread and growing recognition that a 2.7 percent annual rate of per capita growth cannot be maintained (let alone increased)—if the process of industrialization is carried out within the bounds of one country, and if each country is to seek agricultural self-sufficiency.

This would be true even if advanced agricultural techniques were introduced, industrialization were resolutely developed in all countries, capital investment were sharply increased, and extensive technical training developed at every production level. Moreover, it is recognized that a 2.7 percent annual rate of per capita growth does not compare with the recent experience of other countries which are rapidly industrializing—and many seriously question whether, even if achieved, it would meet the economic and social demands of Latin American development.

Generally speaking, there is today no Latin American country with a domestic market sufficiently broad to take full advantage of economies deriving from large-scale production techniques, specialization, and the grouping together of productive activities—although specific and isolated sectors of an economy may be able to do so. The biggest country market in Latin America, Brazil, has an annual purchasing power of $13.2 billion. This could be contrasted with a passenger-car market in the United States representing an annual purchasing power of $7.2 billion. In Latin America, only three countries—Brazil, Argentina, and Mexico—have a total annual purchasing power exceeding this figure.

Feasibility of import substitution

The process of import substitution within individual country markets is economically feasible with respect to consumer industries. It cannot develop soundly with respect to capital goods industries—machinery, equipment, intermediate products particularly in the chemical and petrochemical industries. This is because of their technical complexity and the need for specialization. With respect to such intermediate and final goods, this specialization can only occur within a broad market, if efficiency and lower costs are to be realized. The same advantage applies to agricultural commodities.

Today's annual production of capital goods in Latin America totals approximately $240 million. In order to maintain an annual average per capita growth of 2.7 percent, the 1975 requirements (at 1958 prices) would be $6,500 million. By that time, even granting the most optimistic estimates with respect to Latin American exports and the capital financing of the necessary imports, 60 percent of its annual requirements for capital goods would have to be supplied by the industries of the region.

It may be noted in passing that the U.N. Economic Commission for Latin America (ECLA) estimates that if Latin America's gross product is to sustain its postwar rate of growth until 1975, the gross fixed investment would have to increase from the $8,650 million annually registered in 1954–56 to $31,550 million in 1975. Similarly, passenger-car demand would rise from the 150,000 imported yearly to 1.8 million; steel consumption from the 6.6 million tons of 1955–56 to 37.6 million tons; copper consumption from 70,000 tons a year to 540,000 tons; petroleum (and its derivatives) and coal consumption from the 47 million tons in 1955 to 201 million tons; chemical product consumption from $2.3 million in 1955 to $8.2 million; paper and paperboard consumption from $370 million in 1955 to $1,540 million; and cotton textile production from the current 634,000 tons annually to 1.6 million tons.

V

Payments and credits

The Montevideo Treaty was preceded in January 1960 by a meeting of government representatives of the central banks of the signatory powers. Agreement was there reached that, with respect to payments, the objective was to move to free monetary convertibility; that the coexistence of different payments and credits systems would not prevent the free functioning of the free trade area; that the free trade area should avoid the discriminations which might result from such different systems; and that the fullest use of appropriate credits to finance intrazonal trade should be facilitated. Studies would be instituted with respect to the best possible systems of payments and credits to achieve these ends.

Public reference was avoided with respect to the sharp disagreement at the conference between the International Monetary Fund and the U.N. Economic Commission on Latin America—whose membership, incidentally, in addition to the Latin American countries, includes France, the Netherlands, the United Kingdom, and the United States—concerning the best way to achieve a free payment system. The former—while taking no position on the contemplated treaty, inasmuch as it represented a trade agreement—strongly argued (with the support of Peru, Paraguay, and Bolivia) for a single exchange rate convertible currency, for convertibility of the area's earnings for purchases outside the area. It registered its opposition to any restrictions on payments (including bilateral payments agreements), its objection to any arrangement which would introduce currency discriminations or special arrangements for neighboring countries.

ECLA, strongly supported by Brazil and Uruguay openly and by Chile and Argentina privately, urged a highly nonconvertible payments system, in order to compel its members to purchase within the area. It criticized the IMF position as being based upon a theory of multilateral trade at variance with reality, in that foreign purchases from Latin America depend fundamentally on demand and on trade policy.

The matter was shelved for further discussion—with the date of the next central banks meeting to be considered during the current meeting in Montevideo, which started on April 1, of the Provisional Committee for the Establishment of the Latin American Free Trade Association. The results were thus viewed as a victory for IMF, which had already furnished the signatory governments with over $463 million in stabilization credits.

At this time, the nub of the dispute does not appear to be a significant problem. The Montevideo Treaty, completed within a month of the meeting of the central banks' representatives, was signed without any conditions being attached by the signatories. All, with the exception of Brazil, have de facto convertibility. Most are committed to the gradual elimination of bilateral payments arrangements. Within no more than a couple of years, assuming that LAFTA starts to function effectively, it may be reasonably expected that intrazonal payments will be on a convertible basis.

Under such circumstances, it is understandable that the discussion has begun to shift from consideration of special credits arrangements in the region toward consideration of the most suitable form and modus operandi of regional credits—and all this within an environment of increasing convertibility. The establishment of such a regional credit arrangement would act as a bridge from the existing bilateral payments schemes (with their reciprocal credit arrangements) toward multilateral trade and convertible settlements within the free-trade zone.

VI

LAFTA and the world economy

Whatever the foreseeably new problems for American industry, it would be short-sighted to view LAFTA primarily as an expression of the increasing division of the world into regional markets—including the European Economic Community, the European Free Trade Area, the countries of the Communist bloc. Although nearly all Latin American nations at present follow a protectionist policy, they all view closer intraregional economic association and complete integration as contributing to the development and expansion of the world economy. The Montevideo Treaty specifically seeks to place itself within the compass of GATT. Significantly, it does not, and is not intended to, preclude or replace broader multilateral arrangements.

VII

The timetable of LAFTA

The 12-year timetable may well be accelerated. Originally, the establishment of a free trade area was only intended to address itself to urgent trade problems affecting the southern countries of Latin America. The four southern countries—Argentina, Brazil, Chile, and Uruguay—considered with favor a multilateral instrument, conforming to the provisions of GATT, which would utilize customs policy as a major means of maintaining and developing trade among the states concerned, so as to replace the existing practice of bilateral agreements with their trade, customs, and exchange limitations.

The adhesion of Mexico—which has but little trade with, and trade problems different than, the other signatories—transformed the treaty into the nucleus of a common market arrangement. Two chapters of the Montevideo Treaty—chapter II ("Expansion of Trade and Economic Complementarity") and chapter VIII ("Measures in Favor of Countries at a Relatively Less Advanced

Stage of Economic Development")—represent steps toward the permanent objective of a common market.

There is prospect that Colombia, Ecuador, and Panama may soon join the treaty. If the special treatment (which the treaty expressly permits) is provided, the opposition of Venezuela can quickly melt. Finally, it may be stressed that the considerations pressing for acceleration of the timetable of the European Common Market exist with equal force within the economy and politics of Latin America. This is equally true irrespective of whether the Latin American governments decide that the best means of achieving a common market is via a new general treaty or via utilization and development of the facilities provided by the Montevideo Treaty.

CONCLUSION

In assessing the significance of LAFTA, and the emerging Latin American common market, American industry may well consider the words which the London Financial Times addressed to British industry on the subject on February 4, 1960:

"The lesson in all this for British industry is clear. Although there will be a strong demand for heavy capital equipment in Latin America over the next 10 years or so, it will subsequently be more and more difficult to export any manufactured goods to the area. Therefore, if the United Kingdom is to retain a stake in the area, it must follow the example of her German and Japanese competitors and establish, or share in establishing, manufacturing industries within Latin America.

"The pace of change in Latin America, both political and economic, is rising rapidly, and unless more attention is paid by British industry to Latin American investment within the very near future, it may be too late to start."

Investment, high rates of growth, and rapid industrialization cannot but bring to the forefront such matters as the distribution of income, as well as active consideration of the social conditions under which such development takes place. American industry, no less than other industry, must give careful consideration not only to this matter of timing, but also to the conditions under which it seeks to participate in future Latin American economic development.

These two factors will determine its future role in Latin America.

East Coast District Metal Trades Council Opposed to Bushipe Reorganization Program

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement received from the East Coast District Metal Trades Council:

The East Coast District Metal Trades Council, representing employees of the Navy in all east coast installations are unalterably opposed to the reorganization program now being implemented by the Bureau of Ships.

The consensus of those most closely associated with its true objectives is that it would eventually bring about the total destruction of the naval shipyards. It also indicates that a very small group of individuals within the Navy intend to force their will upon the shipyards, regardless of the damaging results.

The industrial management firm of Cresap, McCormick & Paget are guilty of embarrassing the military by their critical report in 1950 and are also guilty of giving the military an opportunity to recover their prestige by a contrary report in 1959.

The civilian employees of the naval shipyards are gravely concerned with the logic and intent of this program and respectfully request and urge you to initiate and/or support a complete congressional investigation. We also urge you to seek a halt to the current implementation of this program by the Bureau until such time as the investigation may be completed.

The enclosed document was prepared for your information. The facts contained therein were taken, in part, from the Cresap, McCormick & Paget Reports of 1950 and 1959, personal interviews with responsible Navy officials and a consensus of civilian employees and union officials.

In 1949, the firm of Cresap, McCormick & Paget was retained by the Bureau of Ships for a study, the primary objective of which was to determine "the practicability of developing and operating a program of performance measures and management controls" in naval shipyards.

The Cresap, McCormick & Paget report of April 1, 1950, which was submitted upon completion of this study, concluded that a program of performance measurement was feasible and set forth a series of recommendations to implement such a program. These recommendations embraced not only the subject of performance measurement but the related areas of production planning and shipyard organization.

The production, planning, and control program, hereinafter referred to as the P.P. & C. program, was initiated by, and implemented under the general guidance of the Bureau of Ships, on the basis of the recommendations made in the CMP report of 1950.

The P.P. & C. program was established at a tremendous cost to the Navy Department. However, in the very beginning, the Bureau of Ships doomed the program by ignoring they key recommendations contained in the CMP report of April 1, 1950.

These recommendations were in part, a strong implementation program, adequate staffing followed by master planning by the planning department and planning at the working level by the analyst and scheduler in the production shops.

Since the naval shipyards constitute a large and extremely complex industrial organization, any program as broad and important as P.P. & C. requires an aggressive, well-thought-out plan of installation in order to overcome the difficulties which are inherent in the basic enterprise.

The Navy implementation program did not achieve the high standard of performance required and suffered from the following basic weaknesses.

There was a failure to assemble a civilian industrial engineering staff adequate either in numbers or experience at the recommended levels of the organization, the Bureau, the production department and the shops.

As a consequence, the performance measurement aspect of the P.P. & C. program, so heavily emphasized by the CMP report, was underemphasized by inexperienced Navy personnel, in relation to certain other aspects, particularly planning procedures and budgetary control techniques. Instead of production planning and the ultimate in manpower utilization, it became a glorified bookkeeping system.

These basic differences are of overriding importance because job analysis and work measurement are fundamental to increasing shipyard productivity and improving control over costs, the most important objectives of production, planning, and control.

In 1959, the same firm of Cresap, McCormick & Paget were retained by the Bureau of Ships to conduct another study, the true purpose of which is highly controversial. However, we are sure that the report is geared to permit the shipyards to maintain and improve the military control of all important positions, even though it may destroy them.

It is quite clear in the 1959 report that CMP has adopted the theory that the Navy will not implement the most important recommendations of 1949. Therefore, CMP, not wanting to lose a customer and the accompanying retainers, has given the Bureau of Ships the type of recommendations which will most conform to the Navy's inherent desire to protect the position of its transient engineering duty officers.

It is also quite clear that the firm of Cresap, McCormick & Paget were unduly influenced and instructed in the type of report desired by the Bureau of Ships, in that the survey team conducting the 1959 audit included Bureau representation.

The 1959 CMP report indicates an almost complete reversal of concepts, not only in planning effort, but in organization structures as well. They were highly critical of transient engineering officers in 1949 and are critical of civilian shop masters in 1959.

This 1959 study was initiated by the ships cost analysis panel (SCAP), headed by Rear Adm. R. K. James, the present Chief of Bureau of Ships. A most desirable situation, whereby one can make certain recommendations to himself and then proceed to implement his own personal desires upon such a large and complex organization. It is not entirely a coincidence that the formation of the SCAP committee closely followed the recommendations from a committee in the Secretary's office that engineering duty officers be eliminated from the service.

Undoubtedly a complete appraisal of the initial recommendations of CMP by the Secretary's office would have caused considerable embarrassment to the Bureau of Ships. This factor alone establishes the Bureau's motive and desire to have a contrary report from this firm in 1959.

Current Bureau instructions have already implemented the procedures to eliminate the civilian shopmaster positions. This would be accomplished by grouping several shipyard shops under one manager (or master mechanic). Once again this maneuver will weaken the last civilian management obstacle to the placement of Navy officers in direct line of supervision of skilled craftsmen.

Any move by the Bureau to group one craft shop with another, or to use supervision from one craft over another, or to cluster as a first step toward combining distinct craft shops will result in the eventual loss of trade identity and skills. The absolute necessity of trade knowledge, skills and proper supervisory guidance will be lost to the Navy at a time when ship construction is becoming extremely complex.

Other Bureau instructions require the eventual disestablishment of certain support type shops because they are uneconomical to operate. Should this policy be carried to the extreme, one could advocate the elimination of the entire defense program as being uneconomical. The classification "support type shops" indicates the need for keeping them in existence. No shipyard can perform its mission without their services and product. It would be extremely illogical to assume that plants in private industry (if they existed) would set aside their steady flow of production just to accommodate irregular contracts from the Navy. We fail to see how the Navy could afford to keep a

ship at the dock indefinitely while awaiting a lapse in production in these private plants.

Any claims of great monetary savings in overhead or productive costs appear to be asinine. It is commonly recognized that to procure support services from plants outside the naval shipyards, the contractor would expect a nominal profit. The overhead functions within the shipyards would have to remain intact to produce plans, specifications and bids and it is very doubtful if any overhead officer personnel would be discharged simply because a few small shops were closed. Therefore, it appears that closing these shops will cost the Navy money; not save it.

In view of the foregoing we feel that the following questions should be satisfactorily resolved before the Bureau of Ships be permitted to continue with its reorganization program.

Does the Bureau of Ships possess an ulterior motive to wreck the naval shipyards and have the private shipyards obtain all the contracts by default?

Did the report of CMP in 1950 establish a practical system of planning, production, and control?

If not, why did the Bureau attempt to implement the program?

If not, why did the Bureau rehire CMP in 1959?

If so, why did the Bureau ignore the key recommendations of 1949?

(a) To hire an adequate staff of industrial engineers to operate P.P. & C.

(b) To provide for more training of officers if they wanted to utilize them.

(c) Continue to use low-grade officers in responsible positions.

Did the CMP report of 1949 recommend that planning at the working level be performed in the shops and the report of 1959 recommend that this planning be now performed by a central group in the planning department. If so, why the change?

If the Bureau was (or is) sincere in adopting a program of efficiency, why do they insist on eliminating the civilian management personnel who are continually correcting the mistakes of inexperienced officers?

CMP reversed themselves between reports of 1949 and 1959. A system almost identical to their recommendations of 1949 has been implemented in 1960 by the Electric Boat Division of the General Dynamics Corp., a contractor of the Bureau of Ships. Why did CMP reverse themselves?

If CMP was correct in 1949, then they must be wrong in 1959. If they were wrong in 1949, then we must assume that they are experimenting in 1959.

Is the Bureau providing a proving ground for the inventions of CMP?

If CMP criticism is correct of the ability of military personnel to operate an industrial-type organization, what will become of the naval shipyards with the civilian master mechanics gone and the military of all levels making all the decisions without question?

Golden Opportunity for America in World Trade Fair Participation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. WILEY. Mr. President, the ever-growing program of trade fairs throughout the world, offers, I believe, a new, widening opportunity for business, industry, and agriculture, to find new markets for U.S.-produced commodities.

In 1959, over 500 American firms—including a number from Wisconsin—participated in the U.S. oversea fairs.

For 1960, U.S. exhibits are scheduled to participate in the trade fairs in 11 countries, including Japan, Italy, Morocco, Poland, Austria, Syria, Turkey, Afghanistan, Greece, Yugoslavia, and Tunisia.

The program, I believe, can and should be usefully and constructively expanded.

What are the advantages?

Fundamentally, the fairs offer a number of opportunities which would not, perhaps, be obtained as well in any other way.

These include: Opportunity to exhibit the high-quality products of our farms and factories in other countries; contacts with business and industrial representatives from other than the host country; taking advantage of more and more showplaces, to reflect what can be produced by a free people operating under a free way of life; for example, the American exhibit in New Delhi, India—portraying the theme "Food, Family, Freedom, and Friendship," was attended by an estimated 3⅓ million people.

And finally, the fairs also offer opportunity for establishing people-to-people contacts, not just for commercial purposes, but for establishing better relations and understanding between Mr. and Mrs. Citizen of different countries.

Overall, the international fair program offers new opportunity—and a new horizon—for American enterprise.

Recently, the La Crosse Sunday Tribune published a thought-provoking editorial entitled "Golden Opportunities for America in World Trade Fair Participation."

Reflecting a constructive analysis of this new potential market-finding practice, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the La Crosse Sunday Tribune, Apr. 24, 1960]

GOLDEN OPPORTUNITIES FOR AMERICA IN WORLD TRADE FAIR PARTICIPATION

In progress right now in Milan, Italy, is the world's largest trade fair and some 550 American companies are among the 13,500 from some 50 countries which are exhibiting their wares.

Simply as a fair, the exposition is remarkable. It embraces some 40 miles of display front in the very heart of busy Milan, which is itself the geographic center of the European Common Market.

The 1960 additions to exhibition space at Milan are themselves larger than many trade fairs around the world. From America's viewpoint, however, the interest in Milan's show is that it represents one more ambitious effort among a continuing series to promote U.S. products in foreign markets.

This country's productive power is, of course, tremendous. Our economy always has flourished best when we had ample outside outlets to supplement our domestic markets, yet rising industrial levels around the globe make it tougher and tougher to gain and hold such outlets abroad.

Showing foreigners what we have in well-thought-out exhibits in both regular and special trade fairs in countless places is clearly the most direct and positive way to compete successfully in the unceasingly difficult struggle for a part of their markets.

Systematic, carefully planned American representation in trade expositions abroad is therefore now an established official U.S. Government policy and has been for some time.

Though not too many Americans hear about it, an Office of International Trade Fair exists in Washington to guide and shape and advance these efforts.

In 1960, besides Milan, there will be exhibits sponsored by this agency in at least 13 other countries. Greater stress than ever will be put on the quality and the performance of American products.

So long as our participation continues to be as well managed as it has been under our trade fair agency the result should be not only economic benefit to this country, but sound propaganda advantage as well.

It is a solid cause that warrants the support of our businessmen everywhere.

The Unemployment Compensation System

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1960

Mr. ZABLOCKI. Mr. Speaker, my attention has been called to an article which appeared in the April 1960 issue of the Reader's Digest magazine dealing with the unemployment compensation system.

The article raised a number of questions about the goals of the unemployment compensation system and about the manner in which the system is administered. The Department of Labor has prepared a reply to these questions and to the charges made in the article.

In the belief that persons interested in the unemployment compensation system would like to consider the views presented by both sides—namely, the charges made by the author of the article in the Reader's Digest and the reply to those charges prepared by the Department of Labor—I wish to include in the RECORD the text of the statement submitted by the Department of Labor.

The statement follows:

THE FEDERAL-STATE UNEMPLOYMENT INSURANCE PROGRAMS

WHAT IS UNEMPLOYMENT INSURANCE

Unemployment insurance is a cash payment which compensates eligible workers for a portion of their wage loss when they lose their jobs. The objective is to aid unemployed men and women while they are looking for work, by providing weekly income for a stipulated period of time. Moreover, by sustaining the purchasing power of consumers, unemployment insurance contributes significantly to the stabilization of the whole economy.

WHO HAS UNEMPLOYMENT INSURANCE PROTECTION

There are three permanent unemployment insurance programs available to workers through the local offices of the State employment security agencies. They are:

1. The program based on both Federal and State laws which protects over 40 million workers in commerce and industry.

2. Unemployment compensation for Federal civilian employees (UCFE), based on Federal law alone, which protects 2,400,000 Government workers.

3. Unemployment insurance for members of the Armed Forces (UCX), which is based on Federal law alone.

Railroad workers are also protected by unemployment insurance based on Federal law administered by the Railroad Retirement Board rather than the State employment security agencies and the U.S. Department of Labor's Bureau of Employment Security. Therefore, the program for railroad workers is not discussed in this publication. For information concerning this program, contact should be made with the U.S. Railroad Retirement Board, 844 Rush Street, Chicago, Ill.

THE LAWS BEHIND UNEMPLOYMENT INSURANCE

Unemployment insurance depends on both Federal and State laws. It was established by the Social Security Act of 1935 as a Federal-State program. The Federal act levies a 3-percent tax on payrolls of all employers in commerce and industry who employ four or more workers during 20 or more weeks of the year.[1] The Federal act further provides that when a State has an approved unemployment insurance law, its employers can credit the taxes they paid to the State against the Federal tax up to a maximum of 90 percent. The Federal tax is 3 percent on the first $3,000 of each worker's annual earnings, but in effect it is reduced to 0.3 percent by the tax credit provision.

In the beginning of the program the tax rate on covered employers in all States except Michigan and the District of Columbia was 2.7 percent of payrolls.[2] Now in all States except Alaska employers who experience little or no unemployment in their establishments may receive a lower State tax rate than 2.7 percent. The Federal act further provides that the employer can get credit not only for the rate he actually pays under the State law but also for the rate that he is excused from paying under the State experience rating system. Thus, even though the employer may pay less than 1 percent tax to the State, he continues to pay the Federal Government only 0.3 percent. In the year 1959, the average annual employer State unemployment insurance tax rate was 1.7 percent. This average reflects a wide range of tax rates from nothing for some employers in some States to a high of 4.5 percent under certain circumstances in other States.

Each State is required to deposit the taxes it collects under its State unemployment insurance law in the unemployment insurance trust fund in the U.S. Treasury. A separate account is kept for each State and the State may withdraw funds at any time for the payment of unemployment insurance benefits.

Employment Security Administrative Financing Act of 1954

The Federal tax is collected by the U.S. Treasury. Under the Employment Security Administrative Financing Act of 1954, these funds are earmarked for the purpose of financing both State and Federal employment security administrative costs. Any funds left at the end of the year are used first to maintain a $200 million fund for advances to States with low unemployment insurance benefit reserves. If it is not needed for this purpose, the funds are distributed to the States to be added to their reserves for paying benefits, or, if authorized by a State legislature, for paying administrative costs.

Grants to States for administration

Congress appropriates money for grants to States from the proceeds of the Federal unemployment tax for administration of the employment security program—employment service—farm and nonfarm—and unemployment insurance programs.

FEDERAL FUNCTIONS

Federal functions relating to the unemployment insurance program are chiefly the responsibility of the Bureau of Employment Security of the U.S. Department of Labor.

The Federal law places upon the Secretary of Labor the duty of studying and making recommendations as to the most effective methods of providing economic security through unemployment insurance and as to legislation and matters of administrative policy concerning such insurance.

Technicians of the Bureau develop general suggestions to all States on legislation and administration and, on a State's request, provide individual advice and help on specific problems. Because the Bureau receives and summarizes reports from all the States, it serves as a clearing house for information on their legislative, interpretive, operating, and statistical experience. It is also responsible for developing recommendations for Federal legislation.

It is also the responsibility of the Secretary of Labor to determine whether State unemployment insurance laws and administration comply with Federal requirements for tax-offset purposes and also for Federal grants to pay administrative costs. The Bureau determines, within the limits of congressional appropriations, the amounts required by the States to meet necessary and proper costs of administering the State laws.

STATE FUNCTIONS

The payment of benefits to unemployed individuals is the responsibility of the States. The decision as to the amount and duration of benefits, the requirements an individual must meet to be eligible for benefits, the conditions under which disqualifications will be issued, what employers and employment will be covered, and the tax rates assessed on employers are prerogatives of the States. As is to be expected, the provisions in the unemployment insurance laws differ widely from State to State.

Coverage

State laws in 27 States follow the provisions of the Federal Unemployment Tax Act by limiting the program to employers of 4 or more persons. Twenty States extend the program to employers of one or more in covered industry; and four States to employers of three or more workers. Some States use the dollar amount of the employer's payroll as a sole or alternative factor in determining whether or not he is subject to the law.

Nearly all State laws also follow the Federal Unemployment Tax Act in excluding agricultural workers, domestic employees, public employees, and employees of nonprofit agencies and institutions, though a few jurisdictions cover some of these groups.

Benefits

All State laws provide for weekly benefits for a certain number of weeks. The States vary widely, however, in the formulas by which weekly benefit amounts and the number of weeks payable are determined.

The benefit formulas

The benefit formulas of all States relate to the worker's length of employment and earnings in covered employment. Specifically these are earnings during a 1-year base period prior to the worker's unemployment. They are the basis for determining benefit eligibility, weekly amount, and, in most States, duration of benefits. This determination establishes his benefit entitlement for a 1-year period, or benefit year, beginning in most States on the date the worker files his first claim.

The majority of States compute the weekly benefit amount as a fraction of wages in the calendar quarter of the base period in which the individual had the highest earnings. The fraction is generally designed to yield a benefit amount which is 50 percent or more of a worker's average weekly wage. However, each State law establishes a ceiling on the amount of the weekly benefit and no worker may receive a benefit larger than this ceiling. The State maximum dollar amount may act to prevent many workers from receiving a benefit equal to 50 percent of their regular wage. The lower the weekly maximum, the greater the percentage of individuals whose benefit amount fails to meet the 50 percent goal. Eleven States provide allowances for dependents in addition to the worker's basic unemployment benefit.

Forty-five laws provide a basic maximum weekly benefit of $30 or more. Allowances for dependents are generally a flat amount (now $1 to $6 a week) for each eligible dependent. All these States set a maximum dependents' allowance as to the total amount payable.

Duration

In 39 States potential duration of unemployment benefits is determined individually on the basis of the claimant's total earnings or weeks of employment during his base period. The remaining 12 States provide a flat potential duration for all eligible claimants.

Most States which vary duration individually have a minimum of 10 or 12 weeks although several provide as few as 6 or 7 weeks of benefits in a benefit year. All specify a maximum number of weeks payable, as low as 20 weeks in one State and as high as 39 weeks in another. Most provide a maximum of 26 weeks and 8 States pay more than 26 weeks.

Among States with uniform potential duration for all eligible claimants seven States provide 26 weeks, one State 30 weeks, and five States from 20 to 24 weeks.

After the worker has exhausted his benefit rights in the current benefit year, he can receive no further payments until his new benefit year begins. However, six States have special provisions which provide for longer potential duration when unemployment exceeds specified levels. Under such circumstances regular duration is extended by 50 percent in five States and 25 percent in one.

Determining eligibility for benefits

Claimants are not eligible unless they have earned a minimum amount of taxable wages or had a minimum amount of covered employment in the base period. These requirements are set to ensure that only workers with substantial attachment to the labor force can become eligible. All State laws also provide that the worker who is not able to work or is not available for work is not eligible to receive benefits. Eight States, however, have modified this requirement so that claimants who become unable to work after they have registered for unemployment benefits continue to be eligible unless they refuse work that would be suitable were they not sick or disabled.

Every State requests information from the worker's last employer or employers regarding the circumstances of his leaving his job before acting on his claim.

To apply for benefits, an unemployed worker must—

Go to the nearest public employment office.

Register for work and file a claim for unemployment insurance benefits.

Continue to report to the local employment office as instructed, usually weekly, to file continued claims for unemployment ben-

[1] Principal groups exempted from coverage are agricultural workers, domestic workers, State and local government employees, and most employees of nonprofit organizations.

[2] 3 percent in the District of Columbia and Michigan. In New York employers who were subject to the State law but not the Federal law were taxed at 3 percent.

efits and for interviews concerning his job-hunting efforts and other evidences of availability for work and ability to work.

Disqualification provisions

Disqualification provisions in all the laws specify conditions under which an otherwise eligible claimant may have payment of benefits postponed—or, in many States, reduced or canceled. Grounds for disqualification include the claimant's voluntarily leaving his job without good cause or—as specified in some States—without good cause attributable to the employer; discharge for misconduct connected with the work; and refusal, without good cause, of suitable work offered him by an employer or to which he has been referred by the employment service. All States disqualify workers who are unemployed as the result of a labor dispute. In two States, Rhode Island and New York, benefits are paid after a fixed number of weeks of disqualification. In the majority of States, the worker is disqualified for as long as the stoppage of work due to the labor dispute exists. In the others, benefits are denied for as long as the dispute is in active progress. There are a number of other miscellaneous disqualifications found in some of the State laws, such as those denying benefits to workers who quit for marital reasons.

Rights of appeal

Among the requirements of the Social Security Act for Federal financing of the State administration of unemployment insurance is a provision in the law for "opportunity for a fair hearing before an impartial tribunal, for all individuals whose claims for unemployment compensation are denied." All State laws provide for such appeal tribunals; all but four provide for two appeal stages before cases can be appealed to the State courts.

In all States, not only individuals whose claims are denied but employers who are interested parties have a right to appeal decisions on claims.

Penalties

Any individual who willfully makes a fraudulent claim may be subject to any combination of the following:

Repayment of benefits fraudulently received.

Postponement or cancellation of future benefit rights.

Fine.

Imprisonment.

The table below provides some pertinent statistical information on the benefit operations of State unemployment insurance programs during calendar years 1958 and 1959:

Item	1958	1959
New claims	9,919,312	7,924,376
Total disqualifications	1,919,565	1,721,192
Individuals receiving benefits	7,940,688	6,112,152
Weeks compensated (total unemployment)	109,430,582	70,850,335
Total amount of benefits paid	$3,512,732,767	$2,279,017,369
Average weekly wage, covered workers	$86.54	[1] $88.65
Average weekly benefit amount	$30.58	$30.41
Average weekly insured unemployment	2,547,113	1,759,511
Average weekly total unemployment [2]	4,700,000	3,800,000
Amount of benefits obtained fraudulently	$4,926,792	$6,113,639
Fraudulent benefits as percent of total benefits paid [2]	[3] 0.284	0.174
Amount of fraudulent benefits recovered	$3,106,964	$3,565,779
Number of claimants penalized for fraudulent statements	74,988	80,442

[1] Average weekly wage of covered workers during fiscal year 1959.

[3] Percent of benefits paid in preceding year.

ANALYSIS OF READER'S DIGEST ARTICLE, "THE SCANDAL OF UNEMPLOYMENT COMPENSATION," APRIL 1960 ISSUE

1. Page 37, column 2, page 38, column 1:

The article cites the case of a retiree from a Pittsburgh industrial plant who looked forward to leisurely retirement, but filed a claim for unemployment compensation and "during the next 7 months this man picked up $35 every week * * * without doing a lick of work. Then * * * he automatically qualified for another $33 for 30 more weeks. It added up to over $2,000, all tax free, and all in addition to his regular retirement income."

The facts:

This claimant cannot be identified in our records. If the author of the article will provide the Pennsylvania agency with the name of the claimant, and if as stated in the article the claimant did not want work, the claimant will be liable for prosecution for fraud. Action could be taken for the recovery of the fraudulent benefits and a fine imposed. The benefits would be fraudulent because for each of the 60 weeks he is said to have received benefits, he had to sign a statement that: "I was able to work and available for suitable work." In addition, every fifth week for which he claimed benefits, he received a special interview at which he was asked what he had been doing during the prior 5 weeks. These interviews are for the purpose of identifying claimants who are not entitled to benefits.

Pennsylvania's law and those of 30 other States do not prohibit individuals in the labor market from receiving unemployment insurance while drawing a pension. Administratively, however, the States investigate more carefully the availability for work of retirees than of those not receiving retirement pay. (See point 10.)

2. Page 38, column 1, paragraphs 3 and 4, "Standards Collapse":

"The planks on which it (unemployment insurance) was built years ago have been so warped by the pressures of our growing welfare bureaucracy that hundreds of millions of dollars are being wasted on loafers."

The facts:

All laws in the beginning and today require any individual receiving benefits to be available for work. This is frequently paraphrased as meaning "ready and willing to work." From the beginning and still today an available individual has been regarded as one who does what a reasonable person in his circumstances would do to get work. Loafers, etc., have never been legally entitled to benefits. Any claimant may be offered any job known to the employment service which the agency regards as suitable for him in terms of his past employment and training. A claimant who refuses such an offer, without cause acceptable to the agency, is subject to a disqualification for work refusal.

The statutory causes of disqualification and the period of disqualifications have been generally made more severe. Thirty-five States have elaborated on the four original causes of disqualification. The maximum period of disqualification has increased in many States. For example, in 1938 the maximum disqualification for voluntary leaving in any State was 9 weeks. The most common was five or less. Now 22 States disqualify for more than 6 weeks, and 16 States disqualify for the duration of the unemployment.

Throughout the article are innuendoes that there are many payments which were not intended by the original law but which have been made possible by existing law. Benefit payments are made only by State employment security agencies under the terms of State laws. At almost every session the provisions of the State laws are reviewed by the legislators, and if they deem it necessary amendments are enacted. The State laws and procedures have been tightened over the years to give greater assurance that only workers genuinely in the labor market receive benefits. The qualifications, for example, in terms of earnings and length of employment, which a worker must meet to be eligible for benefits have steadily risen. Originally not one State held special extended interviews to explore the worker's continued availability for work. All States have now adopted this procedure.

3. Page 38, column 1, last paragraph:

"In Wisconsin, a mine-hoist operator demanded sick leave for 'arthritis,' only to go touring country fairs as a sulky driver in harness races. Eight weeks later, when he showed up for work, he was fired for misconduct. At that point he applied for benefits, and it was finally ruled that his behavior should not prevent him from receiving compensation."

The facts:

Mulford Callam v. *Montreal Mining Co. and Industrial Commission* (Circuit Court, Dane County, Sept. 9, 1957) (BSSUI,[3] MC-15.05-17).

The initial determination in this case denied benefits on the ground of misconduct discharge. On appeal, the examiner reversed this determination and allowed benefits. The commission, in turn, reversed the examiner and denied benefits. Finally, the circuit court allowed benefits, without disqualification.

Callam, the claimant, worked in a mine for about 8 years as a hoistman. He suffered from chronic rheumatoid arthritis which had grown progressively worse. In the latter part of June 1955, on his doctor's orders, he asked for a sick leave from his superintendent. The superintendent told him that the company did not grant sick leaves but that, if his doctor recommended he take off, Callam should do so and return when he was able. Callam absented himself from work for 8 weeks after June 30, 1955. He stayed at home the first 3 weeks recuperating. He then left the city with his family for a tour of area and county fairs at which he entered and sometimes drove a harness-racing horse in races. Callam came home on August 24, 1955, and reported for work. He was told that his employment had been terminated. On August 4 and 5 the employer had tried unsuccessfully to reach Callam by telephone and in person. On August 5 the employer had sent him a registered letter asking that he report for work or obtain a leave of absence within 15 days or his employment would be ended. Callam never received this letter, although he had left a forwarding address. The court pointed out that considerable latitude needed to be left to an employee's discretion as to whether or not he is able to continue at work.

"Callam did not think he was able to return to work until August 24 and he had medical evidence to back up his contention. There is no contrary evidence other than the commission's conclusion that driving a harness race in two 3-minute heats was just as strenuous as operating a mine hoist. * * *

"The commission in effect has substituted its discretion for that of the workman. Perhaps Callam was mistaken in his judgment as to when he could return to work but does that constitute misconduct under the statute?"

The Supreme Court of Wisconsin in the Boynton Cab case "flatly holds that the term 'misconduct' does not include 'mere mistakes, errors in judgment, or in the exercise of discretion' on the part of a discharged worker, and we think at best that nothing more than a mistake or an error in judgment on the part of Callam is here involved."

Comment:

This is a court decision and not an administrative determination.

[3] Benefit Series Service, Unemployment Insurance.

The court based its decision on a definition of "misconduct connected with the work" that was laid down by the Wisconsin Supreme Court in 1941 in what has become the leading American case on the subject.

The mine superintendent told Callam to follow his doctor's orders and absent himself from work until he was able to return. Nothing in the facts indicated that what he did was contrary to his doctor's orders. Medical evidence did indicate that he was unable to return to work until August 24, 1955. In other words, he did just what his superintendent had told him to do.

4. Page 38, column 2, paragraph 1:

"There's the girl who worked in a musical comedy in New York for about a year, then took a vacation in Miami. She stayed on as a nightclub dancer at $100 a week for 6 weeks. When the show headed for Las Vegas, she quit and went back to New York. Her homecoming was sweetened with jobless aid."

The facts:

New York: Unemployment insurance appeal board, decision No. 60, 435–57 (August 16, 1957; BSSUI, VL–315–5).

The initial determination and the referee both disqualified the claimant for voluntarily leaving her employment without good cause. The appeal board reversed them and allowed benefits.

The claimant, a dancer, was 18 years old at the time she filed her claim. Her first job after leaving school was with a musical comedy in which she worked for about a year. When this job ended she went to Miami for a vacation, but obtained a job there in a night club and worked for 6 weeks until April 13. This employment was terminated when the night club closed at the end of the season. She had been hired for the run of the show in Miami, Fla. Her contract of hire did not obligate her to perform in the same production with an employer elsewhere. She declined to go with the show to Las Vegas for these reasons: She did not want to travel to Nevada. The salary would have been about $102 or $105 a week, out of which she would have had to pay her own living expenses in Las Vegas. She was one of the last employees to be hired and would be one of the first to be terminated in the event of a layoff. Her mother disapproved of her traveling to a distant part of the country because of her age. The appeal board concluded that she should not be disqualified because her contract of hire did not require her to accept the Las Vegas offer and because her youth and limited traveling experience were a good ground for her refusal to travel and to be employed in a distant part of the United States.

Comment:

When this claimant's musical comedy employment ended and she decided to vacation in Miami, she did not claim any unemployment benefits. However, when a chance came to work while in Miami she took advantage of it.

The testimony in the case showed that this 18-year old was living with friends in Miami. This kept her living costs down and provided chaperonage. In Las Vegas she would have had to live at a hotel where her costs would be higher and the guardianship of family and close friends would not be available.

5. Page 38, column 2, paragraph 2:

"After classes let out for the summer vacation, a Georgia schoolteacher who was paid by the year collected unemployment in North Carolina. He claimed that his monthly school checks were for work he had done in the school term."

The facts:

North Carolina: Appeals deputy decision, docket No. 548–UCV–57 (July 12, 1957, BSSUI, TPU–105–43).

The claims deputy denied benefits to the claimant on the theory that he was not unemployed; the appeals deputy reversed him and allowed benefits. This claimant was a Korean veteran and filed his claim for benefits under the program provided by the Congress in the Veterans Readjustment Assistance Act of 1952.

The claimant had been teaching school in Georgia. After he lost this job, he moved to North Carolina in search of employment. Under the claimant's teaching contract with the Warrenton Elementary School, Warrenton, Ga., he had been required to and did perform services from September 1, 1956, to June 1, 1957. The school, however, paid its teachers, including the claimant, monthly on a 12-month a year basis. Claimant was released from his teaching job on May 29, 1957. After that he no longer had any obligation to the Warrenton school and was free to take other work and was willing to do so. His checks, after May 1957, were considered wages that he earned and accrued during the September 1–June 1 period.

Comment:

The North Carolina law (sec. 96–8 (10) (a)) says that "an individual shall be deemed totally unemployed in any week with respect to which no wages are payable to him and during which he performs no services." The pay checks which this claimant received during the summer of 1957 were for work performed during the 9-month school period. They made him no less unemployed than if the school had paid him the same total salary but divided it into 9 equal monthly checks.

6. Page 38, column 2, paragraph 3:

"In Hollywood, a 12-year-old child actor spurned parts as an extra paying up to $28 a day, yet was declared eligible for unemployment benefits. Why? The youngster was accustomed to speaking roles at $100 to $150 a day, so lesser parts were beneath him."

The facts:

California: Unemployment insurance appeals board, benefit decision No. 6574 (January 30, 1959, BSSUI, AA–195–23).

The initial determination and the referee's decision denied benefits to the claimant from August 18, 1957, on the ground that he was not available for work. This was reversed by the appeal board.

The claimant, a 12-year-old actor, had 7 years' experience in movies and TV production. During 1951–53 his maximum annual earnings had been under $700. He earned $1,858 in 1954, over $5,000 in 1955, and again in 1956. As of October 7, 1957, he had earned over $4,900 in calendar year 1957. His normal rate of pay as an actor was from $100 to $150 a day or from $350 to $400 a week. The number of days which he had worked as an actor during the past several years had exceeded, to a considerable degree, those worked by the average child who received work in the entertainment field. In 1957, when he filed his claim, minimum rates for extras were $21.51 per day and $97.15 per week.

During the past few years, there had been a surplus of children seeking extra work and Central Casting Corp., the agency through which the major studios usually employed extras, had generally not been accepting their requests for registration for extra work.

Actors and their agents generally considered that for an established actor who had attained normal rates of pay above the Screen Actors Guild minimum (as was the case with this claimant) seeking work as an extra would lower his professional prestige, harm his acting career, and destroy his established rates of compensation.

"In the present case, the claimant has firmly established himself in the acting profession and has consistently, over a period of several years, secured a substantial amount of work and income in the entertainment field. In addition, he has attained a stature in his profession which allows him to consistently command rates of pay in excess of those set forth in the collective bargaining agreements negotiated by the Screen Actors Guild. Under these facts, * * * we find that there existed for the claimant a reasonable labor market and one which offered the claimant reasonable prospects for continued regular employment therein. Also, in view of the claimant's established position in the entertainment industry, his currently established rates of compensation and, based upon his recent employment experience, his apparent prospects for continued regular employment at such rates, it is our further opinion that the claimant's exclusion of work as an extra player, which paid wages of $21.50 or $28.33 per day, was not an unreasonable restriction."

Comment:

The basic criterion used by the Board to determine the availability of child actors for work has been whether or not they have firmly established themselves in the entertainment field.

The California board decided three other child actor cases on the same day as in this case—Nos. 6575, 6576, and 6577. In 6575 and 6576 benefits were allowed. In 6577 benefits were denied even though the claimant who had done free-lance work in motion picture, radio, and TV production for about 4 years, was willing to accept all types of work which he could perform in the entertainment and modeling fields, including extra work at the minimum scale. This claimant had earned about $575 in 1955, about $3,500 in 1956, and about $2,500 in the first 8 months of 1957. The appeal board said that these earnings indicated that he had not sufficiently established himself in the entertainment and modeling fields so that he could expect to secure employment on a reasonably regular or full-time basis.

7. Page 39, column 1, "Upsurge in Benefit Payments":

"Of the $23 billion in jobless pay handed out during the past two decades, nearly half has been eaten up in just the last 5 years."

The facts:

The article omits the reasons why the amount of benefits paid out in recent years has been considerably greater than in earlier years. There are two major reasons for the rise: (a) a larger number of workers are now covered; and (b) the benefit amount, which is based on the going wage structure, has steadily increased to reflect the constant rise in the level of wages. The article omits the further fact that the rise in benefit amounts has not kept level with the rise in wages. The article also omits the fact that the 5-year period referred to included the 1958–59 recession.

8. Page 39, column 1, paragraph 2, "Bureau Dominates the Unemployment Compensation Program":

Throughout, the article implies and on page 39 states that the program "has long been dominated by Federal officials who are engaged" in a continued effort to cut down the authority of the States.

The facts:

Any examination of the tremendous variation in State unemployment compensation programs reveals the falsity of any charge of Federal domination. It is obviously ridiculous to say that 50 State legislatures and the Congress of the United States are dominated by the Bureau of Employment Security in Washington.

9. Page 39, column 2, "Bureau Dominates Allocation of Funds":

"The BES then channels cash back to the States for their administrative expenses, retaining an average of $6 million a year for its own expenses."

The facts:

The funds are collected by the Internal Revenue Service, and appropriations out of these funds are made by the Congress for the States' administrative expenses. Con-

gress also appropriates the money for Bureau expenses. This is the same process by which other Government agencies obtain their funds.

10. Page 39, column 2, paragraph 3, "Retirees":

"In Pennsylvania * * * workers who had retired on pensions were showered with $20 million in unemployment payments during a 3-year period."

The facts:

Because of the strong implications of withdrawal from the labor market, the States investigate more carefully the continued eligibility and availability for work of retirees than they do with regard to claims by younger workers. In addition, a number of States have special disqualifications for workers receiving pensions. But not all retirees are in the same situation. Some are forcibly retired from one job—and continue working for many years afterward in other jobs. Others are not interested in working. The personal circumstances of each must be carefully investigated and weighed. The worker who retires voluntarily from his last employment may be disqualified for voluntarily quitting his job without good cause. More eligibility for retirement has never been accepted in any State as good cause for quitting a job. Unless the worker has other and substantially better reasons for quitting, the voluntary retiree will be disqualified. By contrast, the worker who is forced to retire is in no different situation from any other worker who is laid off. He has lost his job for a reason for which he is not responsible even though he may be receiving a pension or old-age insurance payments. A typical example of the State approach to the determination of the rights of retirees under usual availability provisions is this statement by the New York Division of Employment:

"Cases of workers who have been retired for age by an employer are closely examined. The amount of pension paid by the employer or the union and of old-age insurance benefits under the Social Security Act and ascertained and weighed in determining such worker's availability, that is, his desire to work. Particular emphasis is given to cases where acceptance of work would entail forfeit of such payments. Restrictions by claimants regarding the type of work and wages sought are evaluated against the prospects of finding employment. An active search for work is required in these cases.

"If a worker retires voluntarily, especially strong evidence is required to demonstrate a later return to the labor market and possible eligibility for benefits.

"Facts examined in making determinations on the availability for work of pensioners include these:

"The circumstances of separation from previous employment, that is, voluntary or mandatory separation.

"The willingness of the claimant to accept such suitable employment as is obtainable in the current labor market in the light of conditions surrounding the employability of older workers.

"Physical capacity of the claimant to do the kind of work for which he is otherwise qualified.

"The reasonableness of the restrictions imposed by the claimant as to wages, type of work, location (travel, transportation), hours, etc.

"The kind and extent of efforts made by the claimant to obtain employment.

"The amount of pension and old age benefits received and their effect on a genuine desire to work, the conditions of continued receipt of such payments, and the willingness of the claimant to forfeit the entire amount, or any part of it, if necessary, to accept employment."

11. Page 40, column 1, paragraph 1, "Seasonal Workers":

"In one city 85 women, mostly housewives, work 8 months of the year. * * * In the spring the plant closes down for the summer. Since no other factories in the area have openings, these women can collect as much as 30 weeks' compensation."

The facts:

Information from Pennsylvania is to the effect that these women are actively in the labor market during the off season and that a number, in fact, do get some work. The workers are regularly tested for their willingness and ability to work. Since they regularly work 8 months of the year, they could not possibly draw 30 weeks of benefits (over 7 months). They would be disqualified immediately if they refused to return to work at the beginning of the season.

12. Page 40, column 1, paragraph 2, "Ill-Considered and Loose Legislation":

"One of the worst abuses in Pennsylvania is a scheme of benefit distribution whereby certain claimants can collect for two 30-week periods without lifting a finger in between. They draw the double bonus because of a loophole they have discovered."

The facts:

This is not a loophole in the Pennsylvania law. There are only 13 State laws which have specific statutory provisions to prevent payment of benefits in a second benefit year without intervening employment.

The article assails the provisions which permit workers to draw benefits continuously from the end of one year through the beginning of the next benefit year. The article does not explain that benefits are payable in any year only on the basis of earnings and employment in a recent base period. The worker, therefore, cannot receive benefits in 2 consecutive years unless he has had sufficient earnings in two consecutive base periods. It is only the accident of when the long-unemployed worker was laid off that determines whether he will have a period of idleness between his periods of benefit entitlement or whether the first period of benefit payments will run into the next. The article also overlooks the fact that the longer a worker remains unemployed the more stringent becomes the State investigation of his availability.

13. Page 40, column 1, paragraph 3, "Employer Appeals":

"In a recent 12-month period more than two-thirds of their (employer) appeals to referees and the board of review were turned down."

The facts:

The article omits the fact that three out of four workers lose their appeals when they appeal to referees and the board of review.

14. Page 40, column 2, paragraph 1: "Consider the case of an inspector in a plant handling defense work. Because he failed to check the measurements on an important machine, $2,000 worth of material had to be scrapped. He was fired. Nevertheless, benefits were granted by a board of review even though the record showed that the inspector had been issued previous warnings by the company because of his carelessness."

The facts:

Pennsylvania Unemployment Compensation Board of Review, decision No. B-47651, May 21, 1958 (reaffirmed October 10, 1958).

The claimant had worked as a floor inspector in a plant manufacturing parts for jet engines for about 6 years. His basic functions were to approve machines, check the piece which the machine was producing against a blueprint, and master the gage on the job. On January 16, 1958, he failed properly to gage the pieces on the job. As a result, the pieces produced were scrapped. Checking the operation of the machine periodically was the duty of the machine operator as well as the claimant. The machine operator was suspended for 3 days. The claimant was discharged for his failure properly to set the gages and failure to make proper inspection of the machine. The board, through its referee, held three separate hearings at which the employer was represented by its accounting firm and several members of its managerial staff. Fifty-three pages of testimony were taken. After considering the testimony, it was the board's conclusion that there had been a failure to prove any deliberate and willful action on the part of the claimant. "We feel that the claimant's actions were actions of misjudgment and as such do not constitute misconduct within the meaning of the act."

Comment:

The three hearings held in this case indicate the detailed care with which the facts were explored by the referee and the board of review. The testimony taken showed conflict as to the extent and nature of previous warnings and commendations that had been given to the claimant. Dispute existed also as to the workload given to the claimant and the ability of one person to do an adequate job of inspection on the number of machines assigned in an area so large as the one which the claimant had to cover. The board's decision was a factual conclusion in the face of the parties' disagreement on the details of the claimant's duties, conduct, and precise cause of separation.

15. Page 40, column 2, paragraph 2, "Pennsylvania TUC Exhaustions":

"For 6 months (in Pennsylvania) every person who had run through all his compensation hauled in an additional 15 weeks."

The facts:

This false statement implies that no matter what the duration of benefits is, the unemployed workers will continue to draw benefits to the very end of the period. The "additional 15 weeks" of benefits referred to by the article were paid out under a Federal law passed by the Congress during the 1958 recession to help workers who were not able to find jobs during the recession within the number of weeks during which the State paid benefits. Seventeen States including Pennsylvania participated in this Federal program. As a matter of fact, of the 251,000 Pennsylvania claimants who began to draw TUC benefits, as many as 115,000—or 46 percent—dropped out before the end of the 15-week period. Clearly, workers continue to draw benefits only while they cannot find work.

16. Page 40, column 2, paragraph 3, page 41, column 1, "Periods of Short Disqualification":

The article is critical of 5- and 6-week disqualification periods and attributes them to "BES-promoted laxity." The cases selected for discussion are misconduct cases involving dishonesty. "In Pennsylvania * * * in 4 years more than $45 million had been squandered on persons who voluntarily quit work or were fired for misconduct."

The facts:

The unemployment insurance program was not set up to punish workers for dishonesty or for any other reason. That is a function of the criminal courts. The unemployment insurance program should only deny benefits to a worker for as long as his unemployment is the result of his own unreasonable actions. Obviously, a good deal of guessing must necessarily take place in trying to predict how long a particular individual's unemployment will be attributable to his own actions. Instead, the Bureau looks to the experience of the average worker. The Bureau's recommendation—and that of many States and students of the program—is that the disqualification in each State should be as long as, or slightly longer than, the period it normally takes workers in that State to find work.

The reference "that only 18 States now bother to impose heavier disqualifications for aggravated misconduct" carries a misleading implication. Originally, no State had such a provision.

17. Page 41, column 2, paragraph 1:

"In Rhode Island a woman clerk married a man from Mississippi and quit her job to live in the South. When she claimed unemployment compensation, her employer objected—but an administrative ruling declared that it is a woman's duty 'to live where her husband designated.' For that reason she got unemployment benefits."

The facts:

Rhode Island: Board of review, appeal No. 5029 (March 14, 1958; BSSUI, VL-155.2-39).

The initial determination denied benefits for voluntary leaving without good cause. The claimant's appeal was decided by the board, without any intermediate referee stage.

The Reader's Digest version is correct in the facts. The board said:

"We have held in previous cases that where a claimant is required to leave her job to join her husband who moves to or is a resident of another State she is acting under a duty imposed upon her by law to live where her husband designates. Accordingly, in doing so, claimant is fulfilling an obligation to the law. Claimant is acting from a compelling reason which in our opinion justifies a voluntary leaving. There is no basis for the imposition of a penalty for voluntary leaving without good cause under the facts in this case."

Comment:

The initial determination, made by the State employment security agency's staff, disqualified the claimant when the employer objected. The claimant appealed from this to the board. The board, composed of a public representative, a labor representative, and an industry representative, unanimously reversed this disqualification.

The board's decision was in accord with an earlier court decision.

In 1953 the Rhode Island Superior Court had approved a decision that a clerk who left Rhode Island to be near her marine husband at a California camp for 2 or 3 months before he left for oversea duty, had left her work with good cause (*Champagne* v. *Department*, P.A. No. 2846).

18. Page 41, column 2, paragraph 2:

"In New York Mrs. Sheila Shaw drew 9 weeks of unemployment compensation after she quit her $45-a-week clerk-typist job to become a bride. Her employer appealed. When the case finally reached the supreme court appellate division, the employer was turned down. The court put marriage in the same class 'as an illness or other event of important personal consequence to the worker.'"

The facts:

New York: *Matter of Shaw* (Appellate division, supreme court, July 31, 1958; 6 A.D. 2d 354; 177 N.Y.S. (2d) 1, affirmed by the court of appeals without opinion, 158 N.S. (2d) 128 (1959)).

Benefits were allowed this claimant without disqualification, at all levels, from the initial determination to the court of appeals.

Shiela Shaw had been employed as a clerk-typist for 2 years by the General Mutual Insurance Company in Albany. She left her job to be married and to live with her husband in North Tonawanda, New York, some 280 miles from Albany. She was married on July 23, and did not look for work until August 23, when she filed her claim. Ultimately (on October 29), she found a job as a typist.

The court pointed out that the statute did not define the meaning of "good cause." "Usually it would be expected to be some cause connected with the employment itself; unsatisfactory hours or wages, strain of the work, transportation or other related difficulties." However, said the court, when the statute is read in context, it is clear that leaving employment "for good cause" may exist because of conditions which have no direct bearing on the work itself. The court pointed to such things as personal illness, illness in the family which may require the individual's help, his desire to continue his education, or an inheritance of enough money so that the individual would not be required to work for a while, as examples of reasons that might constitute a temporary withdrawal from the labor market in good faith.

"Thus, leaving employment for good cause may be integrated with a temporary withdrawal from the labor market; and while they may not be fully coextensive, not every bona fide temporary withdrawal from the labor market would be 'good cause' for leaving employment (having enough money not to need to work, for example), it would seem that 'good cause' ought to be read as a cause having some reasonable foundation.

"We think marriage ought to be treated as such a cause as well as illness or other events of important personal consequences to the workers. This is especially so where it is manifest that the woman who is married intends to return to the labor market.

"The bride of the Victorian era would no doubt regard her marriage as a permanent withdrawal from the labor market, if, indeed, she had ever been in it; but the economics of modern marriage require that many married women work and they intend to remain and do remain in the labor market after marriage."

Comment:

This claimant filed her claim only after she was settled in her new home and ready to go to work. She was married on July 23 and filed her claim 3 weeks later. The court emphasized the claimant's actual return to the labor market and the fact that she did find a job.

19. Page 42, column 1, "Labor Dispute Disqualification":

In the midst of a discussion of laxity in disqualifications for which the article blames the Bureau occurs this sentence: "In scores of labor disputes strikers collect benefits completely contrary to the original intent of the law." The next sentence refers to 25,000 strikers in New York who received benefits. The implication is twofold: (a) The Bureau recommends the New York type of disqualification, and (b) this type of disqualification is to be found in many States.

The facts:

The disqualification of workers for unemployment due to a labor dispute, or for any other reason, is determined by State legislators who regularly review the State unemployment insurance laws.

Actually, only two States now have such a limited disqualification for unemployment during labor disputes. Moreover, the Bureau does not recommend this type of disqualification. The Bureau believes the disqualification should continue as long as there is a causal relationship between the stoppage of work and the unemployment.

20. Page 42, column 2, paragraph 1, "Number of Fraud Cases":

The article points out on page 42, column two that in the last 3 years, "170,000 cases of fraud were officially reported. Yet BES statistics show only 32,000 prosecutions and 25,000 convictions. The officially admitted take by gypsters: More than 12 million dollars."

The facts:

The amount of fraud is small and many cases are detected before benefits are paid. This statement gives a false impression as to amount of fraud and as to the effectiveness of State activity. For the years 1956, 1957, and 1958 overpayments as the result of fraud amounted to about one-fifth of 1 percent of all benefits paid. The article is particularly remiss in not mentioning that regardless of prosecutions two-thirds of the benefits paid out as the result of fraud was recovered. Also the article fails to mention that penalties are imposed by the State agencies even if they decide not to prosecute. Although the figures the article cites refer to claims which were not detected until after benefit payments had been made, these penalties are levied on all fraudulent claims including those that are detected before benefits are paid. During these 3 years almost 200,000 administrative penalties were imposed.

21. Page 42, column 2, paragraph 2, "BES Refusal To Disclose State-by-State Fraud":

The article refers to the more than 30,000 benefit random studies as "detailed investigations in 41 States" and adds that "BES simply refuses to disclose the total amount of fraud in any one of these States."

The facts:

The cases to be investigated were selected with the objective of testing the basic claims methods in the State and not to measure the extent of fraud throughout a given State. The results have value in improving local office functions but have no relationship to the amount of fraud in a State since the sampling method is not done on a statistically sound basis for that purpose. For this reason, and to avoid misuse of the data, the Bureau informed all the States in September 1954 when it sought this information from them that "Information obtained from survey reports to the Bureau which identifies an individual State will be released only with the agency's specific consent." The writer of the article was told this and was invited to write to the individual States for the material if he so desired.

22. Page 42, column 2, "The Federal Advisory Council":

"The Federal Advisory Council on Employment Security, a group of citizen consultants hand-picked by BES and the Labor Department."

The facts:

The Federal Advisory Council is a statutory body consisting of equal representation from management, labor, and the public. The management members are selected by the Secretary of Labor taking into consideration lists submitted by the National Association of Manufacturers and the U.S. Chamber of Commerce; the labor representatives are selected from a similar list prepared by the AFL-CIO. The public members are selected by the Secretary of Labor. See attached list for members of the council.

MEMBERSHIP OF FEDERAL ADVISORY COUNCIL ON EMPLOYMENT SECURITY, JULY 1, 1959

Fedele F. Fauri, dean of the School of Social Work, University of Michigan, Ann Arbor, Mich., Chairman.

PUBLIC REPRESENTATIVES

Mrs. Eveline M. Burns, professor of social work, New York School of Social Work, Columbia University, 2 East 91st Street, New York, N.Y.

Lester B. Granger, executive director, National Urban League, 14 East 48th Street, New York, N.Y.

William Haber, professor of economics, University of Michigan, Ann Arbor, Mich.

Arthur A. Hitchcock, executive director, American Personnel and Guidance Association, 1605 New Hampshire Avenue NW., Washington, D.C.

John Holden, national service director, American Veterans of World War II, 1710 Rhode Island Avenue NW., Washington, D.C.

Omar B. Ketchum, director, national legislative service, Veterans of Foreign Wars of the United States, 200 Maryland Avenue NE., Washington, D.C.

Dale Yoder, professor of industrial relations, division of industrial relations, Graduate School of Business, Stanford University, Palo Alto, Calif.

EMPLOYER REPRESENTATIVES

Raphael M. Dorman, manager, division of industrial relations, Bechtel Corp., 22 Bush Street, San Francisco, Calif.

Robert T. Garrison, vice president, Cluett, Peabody & Co., Inc., 530 Fifth Avenue, New York, N.Y.

Harold Keller, director of association relations, General Dynamics Corp., 445 Park Avenue, New York, N.Y.

J. Wade Miller, manager, central services division, W. R. Grace & Co., Dewey & Almy Chemical Division, 62 Whittemore Avenue, Cambridge, Mass.

John Post, manager, industrial relations department, Continental Oil Co., Houston, Tex.

Jesse C. McGlon, general vice president, International Association of Machinists, 808 Glenn Building, 120 Marietta Street, Atlanta, Ga.

"Birds of Texas"—Book by Roger Tory Peterson

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. YARBOROUGH. Mr. President, I call attention to a publication entitled "A Field Guide to the Birds of Texas," prepared by the noted author and ornithologist, Roger Tory Peterson. The book has been published under the sponsorship of the Texas Game, Fish, and Oyster Commission, and has been reviewed in Time magazine for May 2, 1960. Senators will enjoy the publication itself more than the account of it which will accompany this statement, because it contains some beautiful illustrations of rare birds, including whooping cranes, road runners, Mexican eagles, and other birds of that area, which are not found in other parts of the Union.

It was necessary to get the sponsorship of the Texas Game, Fish, and Oyster Commission in order to make it feasible to publish the book, because it could not be financed privately. Already more than 6,000 copies have been sold, and the book bids fair to become one of the best sellers in the United States. The publication really comprises three volumes bound in one.

Time magazine calls Roger Tory Peterson one of America's top bird men.

I think it speaks well for the growing cultural development of the American people that already more than 6,000 copies of the book have been sold without any high-powered sales campaign.

This book fills a need of decades. In my own boyhood, I sought such a book, but there was none then. I commend Mr. Peterson for his stimulating scholarship.

Mr. President, I ask unanimous consent that the article published in Time magazine be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RARAE AVES

A new bestseller is in the making. Without advertising, and despite a sales system that seems designed to discourage all but the most determined customers, the Texas "Field Guide" has sold more than 6,000 copies—better than some bestselling novels. The author: Roger Tory Peterson, 51, the U.S. top birdman, whose wrinkle-ringed blue eyes (no spectacles except for close work) can distinguish between a harlequin duck and a common scoter half a mile away.

The latest Peterson publishing venture had its origins in a bad case of frustration. Though Texans were confident that they had the most, the biggest and the rarest North American birds, with the whooping crane ready to whoop agreement each fall, they felt neglected during the last quarter-century, when bird watching in the United States developed from a risible oddity to an often rugged sport. The trouble was an embarrassment of riches. A Yankee or Floridian could count on identifying any bird he saw with nothing more cumbersome than his binoculars and a single pocket volume, Peterson's Eastern "Field Guide to the Birds." An Idahoan or Californian had the same assurance with Peterson's "Field Guide to Western Birds." But Texas is where, ornithologically, East meets West, and North America meets near-tropical Mexico. The conscientious Texas birder needs both Peterson books—or all three volumes of Richard H. Pough's "Audubon Bird Guides"—and by the time he had riffled all the pages, the exciting "lifer" (i.e., a new bird) had probably flown away still unidentified.

Five years ago, the Texas Game and Fish Commission asked Birder Peterson to do something about the situation, put up $60,000 and now can boast the best bird guide in the Western Hemisphere (but for 3 years the book can be bought only from the Game and Fish Commission; money must be sent with the order to Austin, Tex.—no c.o.d.'s). The Texas guide demonstrates once again why the Peterson volumes are rarae aves in the book trade. When the first modest edition of the Eastern volume appeared in 1934, it sold an unexpected 7,000 copies in its first year, more than the National Audubon Society's total membership at the time (now 33,000). Since then Peterson's Eastern guide has sold more than 525,000 copies, is running at 46,000 a year, while the Western guide has sold 165,000.

The success of the Peterson guides lies in their difference from earlier bird books, which were primarily artistic (like Audubon's) or coldly scientific treatises on dead specimens in museums. Peterson, a sometime art student and teacher, got the idea (from Ernest Thompson Seton's "Two Little Savages") for schematic representations of birds as they are usually seen—at a distance, in flight or bobbing on the water. He has refined the idea into what he calls "the Peterson system."

Under this system, major groups of birds are distinguished by obvious, overall characteristics. As he points out in the Texas volume, for instance, loons are "open-water swimming birds with pointed, daggerlike bills. Larger than most ducks * * * float low in water"; despite its name, the common loon is "rare south of Corpus Christi." Shrikes are "songbirds with hawklike behavior and hook-tipped bills"; the loggerhead species is widespread in Texas, but the Northern shrike has been recorded in only 5 of the State's 254 counties.

After these broad strokes come successively finer, heavily italicized distinctions: the blue-gray gnatcatcher looks like a miniature mockingbird. A very tiny, slender mite, even smaller than a chickadee, blue-gray above and whitish below * * * long, contrastingly colored tail. It migrates through the whole of Texas, winters in the southern part, breeds in the northern. The black-tailed gnatcatcher has less white on tail. Among the robin's maculate cousins, the reddish tail is the hermit thrush's mark. The deadpan statement, "red eye is of little aid," has nothing to do with liquor but refers to the red-eyed vireo—better characterized by the gray cap and the black-bordered white eyebrow stripe.

All in all, Author Peterson, who is credited with the all-America record for having seen 572 species of birds in a single year, finds Texas bird life more varied than any other State's. It includes such bait for bird watchers as the caracara (an oddball falcon that eats carrion), the chachalaca (only guan in North America), the roadrunner (a giant, snake-killing cuckoo) and the jaçana (a long-toed "lily trotter"). Altogether, there are 487 different basic species which occur regularly, plus 55 accidentals (recorded fewer than five times), for a grand total of 542 species. This leaves California, notes Birder Peterson, "a poor second with nearly 100 fewer specimens."

The Role of a Responsible Opposition in a Democracy: An Address by the Honorable Adlai E. Stevenson Before the American Society of Newspaper Editors, April 22, 1960

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. BRADEMAS. Mr. Speaker, last week I was privileged to hear a discussion of the role of opposition parties in a democracy by three men who are leaders of the opposition party in their respective countries.

The men were the Honorable Adlai E. Stevenson, leader of the Democratic Party in the United States; the Honorable Hugh Gaitskell, leader of the British Labor Party; and the Honorable Lester B. Pearson, leader of Canada's Labor Party.

The occasion was the meeting of the American Society of Newspaper Editors in Washington, D.C., on April 22, 1960.

Governor Stevenson delivered an address on this occasion which, in my

opinion, deserves the attention not only of my colleagues in Congress but all those who publish, write, and read American newspapers.

Under unanimous consent, I include the text of this excellent address in the CONGRESSIONAL RECORD:

ADDRESS BY ADLAI E. STEVENSON BEFORE THE AMERICAN SOCIETY OF NEWSPAPER EDITORS, WASHINGTON, D.C., APRIL 22, 1960

As my two honorable friends and I share this platform, it will no doubt cross the minds of some of you that we have something in common; we are demonstrably and obviously out of office. However, like George Orwell's pigs, some of whom were more equal than others, I will yield to no one in my claim that I am more out of office than they are.

This is partly due to the fact that they are in parliament and are the chosen leaders of their parties, and confidently expect at some point to take over the political leadership of their nations. And I do not. But it is also due to the fact that while they are out of office, I am out of an office which probably did not exist in the first place. I defy anyone to improve on this.

I never liked the title "titular head"; it always reminds me of an agitated and unattractive little bird. And to be "titular head" of the party which does not occupy the White House is to be almost as much of a ghost as those who are popularly supposed these days to write all our speeches. You have no position, no office, no authority, no staff, no salary, and no responsibilities, save perhaps to help pay off the last election debt.

A MULTIPARTY SYSTEM IN TWO PARTY DRESS

Moreover, any vestigial claim to party leadership is disputed—very naturally, I may say—by congressional leaders in their legislative role. On them falls, it can be argued, the full brunt of opposition if their party is out of power. They take up the essential dialogue of criticism and investigation. They harry and attack. They prepare the positions from which, 4 years later, a new campaign can be launched to capture the seat of executive power.

But parties out of office are at best a loose alliance of jealously independent politicians with an eye on the next election and even the presidential nomination. Our American party system has more pluribus than unum in it and except for the purposes of presidential campaign is really a multiparty system in two party dress. So to have an acknowledged leader a party has to have a President.

SEVEN YEARS OF DIVIDED POWER

And latterly we have fallen into a new dilemma. For the first time in our history, we have had 7 years of divided power. The President does not command a majority in Congress. He can only secure action with the concurrence, indeed the close cooperation of the opposition. If, to use a British phrase, the Queen's government is to be carried on, they are obliged to abandon in part the roles of critics and watchdogs and become partners in transacting the great business of the state.

This is all the more essential at a time when the challenges of the times are vast. But the result of divided government is to blunt the issues, confuse responsibility, and in some measure muzzle the opposition upon whose vigor the vitality of our system in great measure depends.

One consequence of this unexpected development in our traditional system is surely to enhance the need for some spokesman or office or organ which can speak for the party in its extra-congressional and national life, however loosely organized it is. And it is here, I believe, that the titular head of the party has a continuing responsibility to attempt to focus issues and participate in the great debate.

Of course, he does not stand alone. There are other party leaders outside Congress with as much or greater resonance. And to further help fulfill this role the Democratic Advisory Council was created after the 1956 election and has contributed much thoughtful partisan comment on public affairs. (Indeed, if our current presidential contests are correct in their hint that Presidents are to be picked from steadily younger age groups, who knows—by the year 1990, we may confidently expect that the next Republican President will be checked and balanced by no less than four vigorous and determined ex-Democratic Presidents—a new hazard added to that already appalling office.)

ENGINE OF SOCIAL PROGRESS OUT OF FUEL?

It is not only the mechanics of our division of powers and the new fashion in ticket splitting that has complicated the role of the opposition in America. There is evidence enough to suggest that public opinion at large is not too enamored of the critical approach. We are, I think, witnessing something new here in the democracies of the West. In the past, critics of social evils, of obvious injustice or privilege or oppression could mobilize behind their protest something like a majority vote. Most people were poor and oppressed and helpless. The vote was their first instrument to register their protest, the first force, other than violence, given them to redress their wrongs. But our modern mass electorates are verging on the comfortable—and to many freedom has come to mean freedom from political responsibility. "Don't let them take it away"—with all its connotations of conservatism (and distasteful memories for me), is more appealing than "Let's build a better world." The engine of social progress has run out of fuel—the fuel of discontent. I suspect all three of us here today have found how difficult it is to struggle for change and challenge and reform as the waves of affluence and the high tide of consumption breaks over the modern electorate.

The style of our age reinforces a quiescent mood. It is a style framed by consumption and designed to increase it. Clearly if you want to sell something, you don't first make the customer mad at you. The voices wooing us from the ether and the screen, telling us of what we owe ourselves, of the admiration we shall excite and the prestigious groups to which we shall belong, and the high executive posts to which we shall succeed—strengthened with so-and-so's breakfast foods, ennobled with so-and-so's cosmetics, invigorated with so-and-so's whisky—these are voices telling us of ease and success and the smiling side of life. It is not always life as we know it. But it is life as we may wish it or think it ought to be.

SLOGANS AND HALF-TRUTHS ENDANGER VIRTUE OF SELF-CRITICISM

And the temptation is overwhelming to indulge in the "soft sell" and wrap up the critical issues of the atomic age and the Communist challenge, of residual poverty, old age, urban decay, racial minorities, under the bright labels of "peace" and "prosperity."

Go further and tie a tag on those who still raise a critical voice, of "disloyalty," or "lack of confidence," of "selling our great country short," and under all the slogans and half-truths the vigor of the virtue of self-criticism may be washed away.

I do not believe free government can survive on less than the truth. In the first place, democracy depends upon an unforced consensus of public opinion. In the short run, no doubt, agreement can be reached on the basis of some passion or prejudice or deception. But they cannot last. As Lincoln reminded us, you cannot fool all the people all the time. The only long-term assurance of democratic unity is attendance to the facts, respect for reality, an abiding devotion to truth, "to cherish," as Jefferson said, "the spirit of the people."

TRUTH VERSUS SOVIET CENSORSHIP

Again, truth is the only possible operating principle for an open society. Perhaps dictators with all their capacity to control and blinker can govern for long periods on the basis of deception. The Soviets have contrived to keep alive a concept of an encircling hostile capitalist coalition that blinds their people and endangers world peace. But they must use every formidable means of censorship to do so. And how long will that last against disarmament with inspection and all the other mounting pressures toward an open society in this shrinking world?

And so it goes. Any government in the West which opts for deceit must sooner or later opt for control and censorship as well. We had an icy premonition of this risk during our shameful McCarthy interlude. His myths of universal conspiracy and ubiquitous disloyalty were quickly translated into blacklists, spying and informing, administrative and academic purges, and other repellent symptoms of totalitarianism.

But our great need for truth lies in the fact that nowhere else can men and nations find genuine security. We all know in our personal lives that there is no greater danger to our health and sanity than delusions about ourselves, our significance or our status. And so it is with nations. They must command the facts about their strength, their resources, their standing, their risks, and their opportunities. Otherwise, they have no means of judging policy, estimating risks, or steeling themselves for decision. A nation that disregards truth puts its very survival in question.

HOUSECLEANING ROLE OF OPPOSITION

So I think the role of the opposition is not just to oppose as Senator Taft used to say, but to expose—to shed light on what has been obscured by the incumbents. In the stress of day-to-day business, all governments face the temptation to push the unsuccessful or the unattractive issues under the rug. All, at one time or another, succumb. So the opposition must engage in a perpetual and vigorous process of national housecleaning. Congressional investigation, public debate, personal pressure, and inquiry all play their part. The rugs are shaken. The issues reappear and the administration itself is helped to perform better by facing, not evading, the difficult decisions.

Naturally, the effectiveness of this activity depends upon the honesty of the opposition's own endeavors. If we ask that government should not rely on prejudice or delusion or deceit, equally its critics must eschew these weapons. If I may illustrate the point from recent experience in Washington, I would say that the opposition had an obligation to expose a lot of fictions about our foreign and domestic situation that have grown up in recent years. And, as for investigating committees under opposition leadership, many recent and useful contributions come to mind:

Senator PAUL DOUGLAS' Joint Congressional Economic Committee's disclosure of waste in the Defense Department.

Senator KEFAUVER'S exposures of exploitation in the drug industry.

Congressman OREN HARRIS' disclosure of the Adams-Goldfine relationship, the television scandals, and shabby ethics in the regulatory agencies.

Congressman JOHN MOSS' investigation of governmental secrecy.

Senator HENRY JACKSON'S studies of the Soviet challenge and our shortcomings.

Senator FULBRIGHT'S Foreign Relations Committee has provided us outstanding regional studies.

How few would know about the inner workings of our defense program or our economy, or the conduct of our foreign policy, if it were not for such responsible opposition.

DEPLORES SPECIAL BRAND OF POLITICAL PURITY

Traditionally the opposition has sought to smoke out corruption. Chairmen of regulatory commissions who accept benefits from those they are supposed to regulate, presidential assistants with dubious business associates, high officials exploiting office for private gain—all these are legitimate targets. But I would hope that in the next campaign neither party will lay claim to some special brand of political purity and that none of the contestants will suggest that the mess in Washington is made uniquely by men of one political complexion. To uncover corruption is part of our service to truth. To tie a political tag on it is not.

There is another kind of opposition that doesn't meet the test but is very effective for discrediting the party in power. A classic example was the variety of Republican views on foreign policy at the end of the Truman administration. They ranged all the way from the internationalia of Lodge and Ives, through the Asia first doctrines of Taft and Knowland, to the Fortress America isolation of Mr. Hoover. It represented no coherence, no party responsibility, but it bewildered the voters and insured an attack on the administration from some direction all the time. Having a fist full of policies and even issues may help the party out of power and be smart politics. But is it responsible; is the party ready and able to govern?

If the opposition owes it to our free system to operate within the limits of good sense, good taste and fair play, I would like to suggest similar standards for the Government too. The temptation to resent outside criticism when you are on the job is, I know, immense. The critics appear to be incompetent bunglers with no intimate knowledge of the complexities and difficulties, simply trying—so you darkly suspect—to make everything more difficult. Yet I do not believe our system can work well unless the Government concedes to the opposition some at least of the attributes of good faith.

RECALLS PROPOSAL IN 1956 FOR SUSPENSION OF NUCLEAR TESTS

This meeting of the A.S.N.E., reminds me of another example, because it was here just 4 years ago that I proposed suspension of the testing of the big nuclear bombs, to stop the headlong progression of lethalness and break the arms race deadlock. I do not believe these sober suggestions deserved the rude obloquy heaped on them by even the President and Vice President—especially since these gentlemen have subsequently agreed to a testing moratorium, but only after Russia took the lead and got the credit.

Similarly I do not believe that my warnings of Russia's growing economic strength back in 1956 and earlier should have been dismissed—as they were by the Vice President—as aid and comfort to the enemy and evidence of my disbelief in our economic system.

I could cite many other examples just from my own brief but brutal political experience. When you can't answer something, make a countercharge to discredit your opponent and divert attention is an old technique. But is it responsible, especially at the level of great national issues? In short, we must be able to attack and probe and criticize without incurring instant accusations of bad motives, bad faith, and insufficient patriotism. These debase and distort the great debate upon which the vitality of our system depends.

PRESS SHARE THE BLAME FOR NATIONAL COMPLACENCY

If the people are complacent and unconcerned about the good health of our system the press must share the blame. I am not concerned with the Republican partisanship of the press, but I am profoundly concerned with its respect for the party system and its obligation to help make it work effectively.

Large sections of opinion are skeptical of politicians and political opposition needs to be reinforced about specific evils or virtues. I am even going to resist any temptation to berate you for unequal treatment of Republicans and Democrats in the news. Nor will I mention your ill-concealed zeal at certain sacrificial festivals of recent years. Instead I just want to exploit today's mood of mutual forgiveness and charity by reminding you that a responsible press can be a great help to the opposition by giving it an adequate hearing. And there have been two recent hopeful signs of objectivity: The New York Post, a Democratic paper, exposed the indiscretions of a Democratic borough president in New York City; and a Republican paper, the New York Herald-Tribune, exposed the indiscretions of the Republican chairman of the Federal Communications Commission.

And if responsible news reporting is essential to an effective opposition, an irresponsible or frivolous press obstructs the system and diverts the public. A good example came to me in Latin America this winter. I took time out somewhere to read a collection of American papers of the week of February 15. Khrushchev was in India. Mikoyan was in Cuba. The French exploded their atomic bomb. The latest Chinese production figures were released. An antiquated school building in New York collapsed. The Geneva talks on bomb testing were making some progress. If the generals testifying in Washington were right, our country was in second place militarily. Eisenhower said he was puzzled that some people were worried.

YET THE HEADLINES ASK "WHEN WILL JACK PARR MAKE UP HIS MIND?"

All these events were important to us and to our children. Yet the big news in most of those American dailies that week was: When will Jack Paar make up his mind? And when that burning question was finally resolved, Dr. Finch's murder trial took over the front pages.

The Government, the ins, then, must be measured by the same standards of responsibility as the opposition, the outs. And the press must call 'em as it sees 'em, not as it would like to see 'em. For make no mistake about it, the essence, the key to free society lies in the strength and critical effectiveness of the opposition. It is our proud claim that the only society that is truly tailored to the stature of man is a free society. But why is this? Why should we not say that man needs a good society or a moral society or even, Heaven help us, an adjusted society? Why do we seek freedom first and why is the principle of a critical opposition part of its essential operation?

The answer, I think, is to be found in our deepest insights into man's sublime but divided nature, in the paradox of his needs and capacities and the perpetual drama of his struggle to realize his nature to the full. We are born to grow into truth by experience, by learning and failing and learning again. Truth is not a birthright. We are not born to it as we are to appetite or mobility. We have to seek it and learn it, and this is precisely our freedom. It is not a vain search, for truth can be known. But it is a genuine search.

MISTAKES MUST BE CHALLENGED

Since, then, we are bound to err in our search for truth, error must be made real to us. Our mistakes cannot be left unchallenged, or our own search for truth will be checked. Nor have we any right to be silent when we see error, for we are inhibiting others' growth in the truth. It is this sense of truth made available to all by rational inquiry, by searching question, by honest criticism, by refusing nothing to the probing intellect, that is one of the glories of our way of life.

And it therefore should not surprise us that only in the West has the dialectic of truth and error come to be incorporated directly in the processes of government—administration and opposition, between them checking, correcting, revising, and even in the attack assisting each other to their moments of political truth. Indeed, our party system which grew up virtually undesigned and unplanned, first in Britain and then in America, seems almost a spontaneous product of our profound and subtle realization that truth is an unfolding and a discovery, a child of human trial and error—never an inheritance, never a possession, never an unearned right.

OUR VIRTUE, LIKE OUR TRUTH, IS NOT A HERITAGE BUT A STRUGGLE

True, this dialectic depends upon the honest pursuit of truth. Reason is the instrument of our search, not passion or ambition or prejudice—or folly. And since we are prone to all these things, opposition as a principle of our political life represents another of our insights into the nature of man.

In spite of all his gifts and powers and aspirations, it is not good to tempt a man beyond his strength. Our virtue, like our truth, is not a heritage but a struggle. No moral achievement is entirely safe, for each day we face again the choice of doing as well or doing better—or doing much worse.

In this striving, it is a matter of experience that some strains are almost too great for human fortitude—and of these strains, none is more testing than that of prolonged and unquestioned power.

I am aware, indeed I might almost attest the truth, of the rephrasing of Lord Acton's dictum: "All power corrupts; being out of power corrupts absolutely." What is certain is that the possibility of alternating the government—which only the acceptance of opposition secures—is essential to the health of both—to those who govern and to those who would. If succession to power is the consequence of successful criticism, this fact in itself should sober the critics, keep their attacks within the limits of the practicable, weight them with the sense of coming responsibility, weaken the pull of the lunatic fringe.

DEPENDENCE OF ONE POLITICAL PARTY ON THE OTHER SHOULD NOT BE LOST FROM SIGHT

And for the government itself, the certain knowledge of accountability checks the arrogance and insensitiveness, the opportunism and the greed which the vista of unopposed authority creates. But if succession to power is also sometimes the consequence of dishonest and irresponsible criticism, then the whole democratic system is corrupted and enfeebled. So I think the press has a special responsibility to police the duel and enforce the standards of political performance and accountability.

All this, I know, is likely to be forgotten in the heat of the fight, at the height of the partisan struggle, and above all in the big show of the presidential election. But it is essential to the health of our great commonwealth that the dependence of each party on the other in some real measure for its honesty, its vigor, its trust, and its purpose, should never be wholly lost to sight.

The chorus of political rhetoric will be rising in the months to come. We shall not be mincing words on either side. Yet to every honest man in the fight the politicians must be ready to say: "My brother, my other self—mon semblable, mon frère—together we are building the liberty and strength of the Republic, together we are creating the conditions under which men can be governed and still be free."

Seventieth Anniversary of the Evening Telegram, Superior, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. WILEY. Mr. President, throughout U.S. history, the role of our newspapers has had a profound effect upon American life—upon our thinking, knowledge of day-to-day events, economic, educational and cultural progress and planning to meet the challenges of the future.

Overall, the newspaper, too, has become a great influential institution in our way of life to us individually—informing and enlightening the minds and lives of our people at home, school, office, farms, and wherever people work, play, and live.

With such influence, of course, goes hand in hand a great responsibility.

Fortunately, the great newspapers of this country have risen to the challenge and in a splendid way for the most part have discharged their tremendous responsibility to the American people.

At this time, I would like to pay particular tribute to an outstanding newspaper serving the citizens of Wisconsin and surrounding States—the Evening Telegram of Superior, Wis. Recently, the Telegram celebrated its 70th anniversary. As all of us sometimes do, the Telegram forgot its own birthday.

We recognize, however, that the real marks of progress are measured in accomplishments—not in years. By such a yardstick, the Telegram can indeed be proud of its history and service to its reading public.

On its 70th anniversary, I believe it deserves the highest congratulations upon its splendid work. With such commendation go best wishes for a bright future of continued outstanding service to the people of Wisconsin, surrounding States and the Nation. I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Telegram entitled, "Not a Question of Age, but Remembering, for Us."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Evening Telegram, Apr. 26, 1960]

TELEGRAM BIRTHDAYS—NOT A QUESTION OF AGE, BUT REMEMBERING, FOR US

Some people prefer not to discuss their age in leap year.

Some prefer not to discuss age at all.

The Eevening Telegram has been inclined to brag a bit about its own age, leap year or no leap year.

But, the 1960 leap year is proving embarrassing to this newspaper. It's not a question of age, however, but rather that of remembering its birthday at all—and its 70th at that.

First of all everybody around the newspaper who knew it completely forgot that last week Wednesday it marked up the seventh consecutive decade of publishing. That equals 70 years. The Telegram had published 314 issues. So, on that day the Telegram's "folio number" on page 1 should have read, "Volume 70, No. 314." Then, Thursday would have been New Year's to the Telegram, starting off the day with "Volume 71, No. 1."

The Telegram publishes every day of the year except Sundays but there are chances of a variation from the 313 issues. First some years have 53 Sundays. Then there is leap year with an extra day. The publishing year from April 21, 1959 to 1960 had only 52 Sundays. However, that same period had an extra publishing day, February 29. It was a close miss, though. April started on Friday. If it had started on Thursday instead—oh well, figure that out for yourself.

This may sound as if there should have been some system to take care of the numbering. There was a system, that is years ago. But even as late (or early) as 1908 or thereabouts there was confusion. The actual numbering is taken care of in the composing room. Elmer Olsen, who started working on the Telegram in 1899 and, except for one or two leaves of absence including war service, spent his life with the paper, early became assisant foreman in the composing room. He figured out a way to make what he considered a permanent record of the Telegram's birthday.

One of the building supports in the composing room was a sturdy wooden beam. It was painted a light color and offered a good space, high as Elmer could reach where he could record the date, April 21, 1890. The newspaper started on a Monday. That became the historical record until a fire scorched the post and obliterated the record.

By that time the date was pretty well fixed in many minds and some years later when the Telegram moved into its present quarterms, memory continued to serve pretty well with the help of some arguments now and then. Anyway, the posts in the new quarters were of cast iron, get painted once in awhile and writing on them is taboo.

This is by way of telling you that if during the past several days you have been confused by the "folio numbers" being out of line, don't let it disturb you. Just forget about the numbers and go by the day and date. Maybe that's the way you have been doing it and if so you needn't read this explanation at all. Just check the front page numbering. It should read: "Volume 71, No. 5." The Telegram is therefore 70 years and 6 days old today. . Or will it be tomorrow?

Statehood Brings Rising Economy to Hawaii

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. FONG. Mr. President, there is general interest concerning the impact of statehood on Hawaii. The Honolulu Advertiser in its April 24 issue contained an article by a distinguished United Press international correspondent relating the effects statehood has had on Hawaii's economy during the past year.

I ask unanimous consent, Mr. President, that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATEHOOD SENDS ECONOMY RISING
(By Wendel Burch)

(EDITOR'S NOTE.—Hawaii and its people are making big news these days. Thousands of words are written and published every week about our islands. But what do visiting newspaper and magazine writers tell others about the 50th State and its people? And where do they think Hawaii is going? The following article, by a distinguished United Press International correspondent, will appear in newspapers throughout the world.)

HONOLULU, HAWAII.—One year after statehood—is booming, bewildering, and busting out all over.

A year ago March 12, Congress voted statehood for Hawaii. What is it like in the islands on this first anniversary?

Records are falling in every field, planners are plucking blueprints to bits, kamaainas (island-born residents) are shaking their heads, tourists are peeking into every nook and cranny, politicians are at once suffering and reveling in such problems as the need to make 400 or more job appointments.

Smiling businessmen rush off to expanding offices while task forces from mainland organizations hasten to make proper contacts.

Where else would you find a 7-story apartment, with penthouse, planned on 20- by 40-foot property? Or earth movers, tractors, and bulldozers painted shocking pink? Or a top-floor restaurant on a small skyscraper that will rotate on the hour, every hour?

Waikiki Beach hotels are crowded, despite building projects that have piledrivers working alongside many of them, or drills clatteringly biting into the hard coral foundation underlying the light soil cover.

New construction in the hotel field this year will add approximately 2,200 rooms in the Waikiki area, and projects are underway on the other islands to accommodate hundreds of added travelers. All kinds and classes of construction are underway. Among them is a church financed and operated hotel where no liquor will be served.

There are innumerable housing and suburban development projects underway. Lots even are advertised in New York newspapers, and one such sale brought in a reported $500,000 for property not far removed from the scene of the volcanic eruption on the big island of Hawaii.

The Henry Kaiser organization is gouging out a vast new community near Koko Head, beyond Diamond Head on Oahu, for some 50,000 persons. The cost is estimated at $350 million.

In the Kailua area of Windward Oahu, across the mountains from Honolulu, hundreds of new homes have been built in a project named "Enchanted Lake," with hundreds more planned or being erected in surrounding communities.

Government costs are rocketing upward, along with everything else. The city and county of Honolulu will spend eight times as much this year as it did in 1940. The area must spend $10 million for new schools or additions, out of a $40 million budget.

Rural development presents a great challenge to each of the major islands in the 50th State. And recreational facilities must be developed in anticipation of a population increase from 522,000 persons to 705,000 by 1970, with 1 million distinctly in the offing.

Among plans under study are those for a new $6,500,000 harbor passenger terminal; a $2,500,000 small boat harbor improvement; a general transportation development master plan; a $200 million capital improvement program for the city of Honolulu in the next 6 years; a $10 million sewage treatment plant; and a multimillion-dollar project to replace overcrowded International Airport.

Construction now is the second ranking industry in the islands, although a certain

leveling off is anticipated as a result of the decline in demand for luxury-type apartments and housing, and a drop in military work.

Just to keep everything normal there are plenty of problems confronting the State. Sugar and pineapple, long major revenue producers and sources of employment, are facing almost certain declines. There is an urgent need for diversification.

Tax problems are multiplying as budgets increase and demands rise. Long-entrenched interests are being nudged and pushed by new and outside capital.

Honolulu's central business district is plagued by narrow streets, buildings whose median age is 42 years, and buildings desperately inadequate for modern merchandising or office operation.

Nevertheless, Hawaii is doing just fine as the newest State, and the air of excitement, enthusiasm, and assurance pervading its residents is unmistakable. Culturally they look forward to an immensely important role as the U.S. meeting point in the Pacific with Asia.

The Inflation Issue of 1960

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. MUNDT. Mr. President, the Scripps-Howard newspapers have been running an informative and interesting series of articles on the big issues of 1960. The decisions voters make next November are likely to go far toward determining their destiny for the rest of this century.

Because the integrity of the American dollar means so much to so many—in terms of success and security, in fact, it means everything to everybody—I take this means of calling to the attention of readers of the CONGRESSIONAL RECORD the Scripps-Howard article on inflation as an issue in 1960.

I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS WE BELIEVE (THE INFLATION ISSUE OF 1960)

Inflation is just another term for high cost of living. Practically everyone is against it—except the sharpshooters who can juggle credit to make money out of it. But, while damning inflation, many in public life continue to press for the things which cause inflation. This is something the voter should watch closely in this 1960 election.

There's nothing very mysterious about the nature or causes of inflation. It is what happens when the buying power of money goes down.

In the United States it has gone down more than half in 20 years. A dollar that was worth 10 loaves of bread, for example, in 1940, is worth less than five today. The value of the dollar still is falling.

Thus a man who earned $1 an hour in 1940 now has to have better than $2 an hour to break even—even more than that since higher hourly rates raise his tax brackets. The $100 pension on which he planned, then, to retire now will be worth only as much food and clothing and shelter as $48 will buy. So inflation steadily whittles away the savings and the living standards and the security of all who work for wages.

Inflation is a vital election issue of 1960 because it lies almost entirely within the control of the National Government. The policies followed by the President and the Congress to be elected in November essentially will determine whether there will be more, or less, inflation. Basically—through a multitude of decisions on spending and debt—they decide what money is worth.

Currencies have been inflated to the point where they had little value, or none at all, simply by printing more of them. The prewar German mark, which is worthless, and the French franc, recently revalued, are good examples.

Printing a new government bond has similar effect—identical in the case of short-term paper which is the same as currency. Anything that increases the supply of spendable money without proportionately increasing the supply of goods for which it may be spent is inflationary.

All Government spending tends to be inflationary. The effect is multiplied when the Government borrows. Each new bond issue becomes the basis for additional cash and credit with the effect of creating new money out of thin air.

The new administration can fight inflation by spending less, or encourage it by spending more—especially by borrowing and spending more. Governmental policies are not the only factor in inflation, but they are the primary one.

There is a fairly simple test for the candidate:

If he promises new projects, more spending, glosses over the debt, he leaves no doubt about it. He stands, in fact, for more inflation, cheaper money, dwindling pensions and savings, perhaps a dollar worth only two loaves of bread.

Necessity of Adequate Water Supply

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. YARBOROUGH. Mr. President, although our farm folks often give considerable thought to having an adequate water supply, when we live in the city for a considerable period of time we generally come to take water pretty much for granted. It is almost always there when we need it, and at very reasonable cost.

Recently the Honorable W. W. Munn, mayor of Big Lake, Tex., wrote an article entitled, "Water Is Worth What It Costs." Mayor Munn reveals that he was strongly impressed with the demand for water by his constituents when the city water supply failed.

His extremely interesting article was published in the March 1960 issue of Town and City, a magazine widely read by city officials and employees. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAYOR WHOSE CITY RAN OUT SAYS: "WATER IS WORTH WHAT IT COSTS"

(By W. W. Munn, mayor, Big Lake)

I would like for you to think with me for a short time about the importance of water. We, as human beings, have to have water at any cost to exist. We take water for granted, for all we have to do is turn a faucet. And as a result of water's being too convenient, we use more.

As of now, water will not become a chemical on the shelf as some of our other natural resources are.

The biological makeup of man is such that he requires so much water each day to exist. Over in the short-grass country of the southwest part of this State, I suppose that in the past more men have been killed over water and fence lines than anything else.

I would like to give you some figures briefly on water used here in the United States. It is not my plan to bore you with figures from a complete detailed survey.

1. There are 19,000 publicly and privately owned water utilities in the United States.

2. There are only 115,000 employees in this industry. Compared wtih other industries, the number of people employed will be low.

3. The per capita consumption in 1940 was 122 gallons per day.

4. The per capita consumption in 1959 was 140 gallons per day.

5. The estimated per capita consumption in 1975 will be 160 gallons per day.

Of all water utilities, privately or publicly owned, 86.4 percent serve towns of less than 5,000 population. This is the category my community comes under. Towns with less than 10,000 population are served by 93.3 percent of all water utilities.

All but 2.7 percent of water utilities serve towns of less than 25,000 population.

Water is the biggest bargain in the family budget today. I could make this statement and it would be correct if water rates were increased 300 percent. A rate increase of 50 percent is urgently needed now. Most publicly owned water systems need rate increases. These rate increases should be based on system requirements at present and for at least 5 years in the future.

Some of the problems which must be faced by water utilities:

In towns of 10,000 population or over—

1. One out of five water utilities is deficient in supply.

2. Two out of five are deficient in transmission capacity.

3. One out of three is deficient in pumping capacity.

4. Two out of five are deficient in treatment capacity.

5. Ground and elevated storage show deficiencies of 29 percent and 43 percent, respectively.

6. Distribution system improvements are required in 57 percent of the water systems.

To help remedy this situation, an analysis by a competent trained consultant should be done every 4 or 5 years at the minimum.

Demands on water supply:

The population increase in the United States from 132 million in 1940 to 175 million in 1958, has occurred almost entirely in urban areas. This population depends on public water supply. The demand for water has increased from 82 million gallons in 1940 to 125 million gallons in 1958.

Right now we do not have a water shortage. The shortage is in storage and pumping facilities and pipelines. These facilities have been inadequate since 1940. Water utilities supply houses, stores, offices, and factories with about 20 billion gallons of water per day, or an average of about 140 gallons per day for every man, woman, and child. Water needs will increase about 270 percent in the next 25 years.

Have you ever lived in or been in a city when you ran completely out of water, even drinking water? Well, I was mayor of Big Lake when we ran completely out. Now, if you do not think you are on the spot when that happens, you are mistaken. If a fire had started, we would have had to let it burn to the ground.

How are you going to finance these improvements?

If you will pardon the local reference, I have a project I would like to tell you about. We, as a community are very proud of it. Several years ago a few far-thinking and public-minded people talked over our water supply. We had a supply of water, but it was very bad. The water contained a high percentage of magnesium sulfate. Now if I remember my chemistry correctly, that means epsom salts. There was a source of good water about 25 miles north of town. Hydrologists told us there was plenty of underground water.

As a city, we could not finance this project. We had a large outstanding bonded indebtedness with a total tax valuation of about $3.5 million. The estimated cost of the project was $800,000. The city could not do it. So the people created, through legislation, a countywide water supply district. The creation of the district was voted on by the people of the county and carried. In passing, I would like to say that the project was contested, and went to the supreme court of Texas.

Right now, I am happy to say the project is completed and the city of Big Lake is purchasing water from the county water supply district, and we have plenty of good water. In planning this new water supply, it was set up to take care of our needs for 15 years with an estimated population of up to 15,000. This plan is working out very nicely for both the city of Big Lake and the county water supply district.

Goals for America

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, April 29, 1960

Mr. PROXMIRE. Mr. President, above and beyond all of the major issues facing this body and our Nation is the paramount problem of how to secure, for ourselves and our posterity, an honorable and lasting peace.

Nowhere have I found a more intelligent and comprehensive approach to this supreme issue of our time than in the policy statement on peace submitted to the Democratic Midwest conference in Detroit, Mich., March 26, by the able and articulate Patrick Lucey, Democratic chairman of the State of Wisconsin. I ask unanimous consent that his statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

GOALS FOR AMERICA—POLICY STATEMENT, DEMOCRATIC MIDWEST CONFERENCE, DETROIT, MICH., MARCH 26, 1960

PEACE

Whereas the furthering of human dignity, the advancement of the rights which we hold to be self-evident, and the achievement of a better life for all people is dependent * * * upon an honorable and lasting peace; and

Whereas an enduring peace requires the progressive development of the health, the vitality, and the viability of independent societies throughout the world; and

Whereas mankind has invented a means of total self-destruction and obliteration, so that an atomic holocaust hangs like the sword of Damocles over the world; and

Whereas civilization might be reduced to a heap of radioactive rubble because of a miscalculation of intent, of capabilities, or even of the meaning of a blip on a radar screen; and

Whereas the Soviet Union has recently joined in the international concern over the arms race and may be ready for a meaningful first step toward an arms-control agreement; and

Whereas the administration's response to all of the above has been to compound confusion with contradiction, symbolized in the ever-widening gap between the State Department and the Atomic Energy Commission: Now, therefore, the Democratic Party assembled at its midwest conference hereby

Resolves, That an honorable and lasting peace is the paramount and overriding imperative of our time, and that the Democratic Party dedicates the full strength of its resources to the attainment of such a peace, and that it commits itself among other specific objectives, to the following:

1. Seek to assist the underdeveloped countries:

The United States must join with other prosperous nations to help our less fortunate neighbors achieve viable, independent economies and the minimal requirements for decent living. We must revalue and reassess the assumption of our foreign aid program which accents the military at the expense of economic development. We condemn the administration's distortion of the great aims of our aid program initiated under President Truman.

Countries in Asia, Africa, and Latin America need our help. That is the point. We must not give aid as a cynical expedient, but rather as a part of a genuine attempt to better the human condition throughout the world. Larger but more effectively managed programs of capital and technical development are a must.

While remaining mindful of the needs of the south Asia region as a whole, India's economic and social development is of particular, pivotal importance. Much of uncommitted Asia and Africa look to India as democracy's alternative to totalitarianism.

India has a population equal to that of Africa and Latin America combined; it has the Gandhian tradition of freedom, a democratic government, and the resources and talent for greatness.

It is imperative that we help India achieve a satisfactory measure of economic growth and political stability.

2. Seek a progressive, practical, and effective program of disarmament:

(a) The prelude to such a program should be an atomic test ban agreement now, covering all detectable tests, and a 1-year moratorium on all underground tests, coupled with a joint, international research program to develop, and refine detection devices during that period. The U.S.S.R. has agreed in principle to open its territories to a number of control stations, with international inspection teams, including Americans; it has agreed to the principle of mobile inspection of suspected test violations; and it has now agreed in principle to the concept of a partial test ban based on the detectability of further tests.

We urge our Government to test out the recent Soviet proposal by constructive counterproposals. We believe that an out-of-hand rejection of the Soviet offer would be a mistake. If the Soviet Union agrees to a controllable ban on large tests, let us agree to a limited moratorium on the undetectable small tests on the condition of a solution to the problem of test-site inspection and on agreement of the Soviet Union to its readiness to participate in a joint research effort to solve the problems of detection. Such arrangement offers the best hope of preventing the spread of nuclear weapons to further nations. We call on the United States to take the lead in the fight for the control of these weapons of mass destruction.

(b) In the missile age detection by inspection and controls on the potential launcher's territory should be vigorously pursued in all negotiations. Lightning detectability diminishes the threat of a lightning surprise attack.

Therefore, early warning devices, although not disarmament, are crucial to limiting the probable use of armaments, and reducing the danger and likelihood of war, which is the goal of any sound disarmament program.

(c) With the Soviet Union and other arms-exporting countries, we should promote a regional arms embargo on the shipment of weapons to trouble areas such as the Middle East and Latin America, and promote regional disarmament wherever possible.

(d) Total nuclear disarmament, encompassing the control and cutoff of nuclear weapons production, the eventual reduction and liquidation of stockpiles, and the regulation of the use of outer space, will take time. The present allied offer put forth at the Geneva 10-nations' disarmament talks, while a proper step in this direction, is too limited and not advanced in sufficiently credible or persuasive terms.

(e) While continuing our best efforts toward a nuclear rollback, we must strive for an immediate ban on the equally intolerable bacteriological and chemical warfare.

(f) We must remember that our ultimate goal is the abolition of all wars, not just nuclear ones. Further, there is always the danger that limited wars won't stay limited. Therefore we must also aggressively pursue a conventional weapons disarmament agreement.

(g) History shows that armaments races lead to war. Yet commonsense shows that half-cooked, unilateral, unplanned disarmament can also lead to catastrophe. Therefore, in the interest of peace, we must approach conferences with the Communist governments with an equality of strength and bargaining power. After all, we are invited to the summit not because of our virtue but because of our power.

Despite an expenditure of $350 billion for defense during the past 8 years, over and over again we hear the charge—from responsible people within the administration—that this country's defense effort is inadequate. How inadequate and in what ways is a matter of argument, but that it is inadequate is a matter of fact.

3. Seek to relieve tensions the world over:

(a) Europe: As long as a nation's soil is inhabited by alien troops against the will of its inhabitants and in areas of high tensions, peace and stability have not yet been achieved.

Recognizing that proposals for a mutual thinning out of foreign troops from central and Eastern Europe need further study, we must keep alert to the possibility that effective and mutually advantageous proposals might be accepted by all nations concerned. Should the Soviet Union agree to such a proposal, the spirit of freedom in East Germany and Eastern Europe would have a new chance to emerge.

(b) China: Disarmament and inspection programs which exclude China are either unrealistic or incomplete.

Short of diplomatic recognition we can take steps to improve mutual news coverage; to permit trade on the same terms that we allow with the Soviet Union, and to promote an atmosphere of gradual acceptance of the two-China theory which will help put the existence of an independent Formosa on a better, long-term basis.

It is of the utmost importance that we should stop the kind of go-it-alone policy we have pursued in Quemoy and Matsu; in the future we should consult and try to concert our policies with the principal, free powers in the area concerned.

4. Seek to strengthen institutions of world order and the rule of law:

Today's world is politically, economically, and socially interdependent. Therefore, in the final analysis an honorable and lasting peace will only be found on the universal substitution of the rule of law for the rule of force in the world community. To build toward that end the United States should:

(a) Make more use of the United Nations for economic aid, technical assistance, border patrols, and other appropriate activities.

(b) Repeal the so-called Connally amendment, which diminishes the prestige and effectiveness of the World Court.

(c) Encourage international working agreements such as the European Common Market. We should also strengthen the World Bank and the International Development Association so that the economically strong can increase their contributions to and investments in the underprivileged countries.

(d) Encourage international exchange programs at all levels, with friends and foes alike. Such informal programs, designed to promote communication and understanding among the peoples of the world, can be of immeasurable help in moving the world toward peace.

5. Seek to develop domestic policies for peace:

We must organize resources and manpower for peace as we do for war. Today our peace-effort is inadequately manned and is haphazardly scattered throughout the executive branch. We need:

(a) Arms Control Research Institute (Peace Agency). We must establish a high-level agency of scientists, experts, and specialists in the problems of disarmament to help develop our programs, guide our policies, and service and spark our negotiators.

(b) A planned transition to a peacetime economy. We should now formulate and publicize the blueprint for a truly peacetime economy. When a just peace is insured the $40 to $50 billion now spent for defense can mean investment in the public welfare, tax relief, more funds for economic development abroad, reorientation of defense industries, and research for peaceful purposes.

(c) The encouragement of foreign trade through such devices as investment guarantees, tax advantages, lowering tariff barriers, and international cooperative arrangements directed toward reducing various forms of trade obstacles and discrimination.

(d) A renewed national sense of purpose and strength. We need massive material and spiritual efforts to give our people the sense of direction, public values, and purposes which they have sought in vain for almost 8 years.

Such efforts will include an increased program for education, an economic takeoff which will get our economy growing fast enough to meet the needs of the years ahead at home and abroad, and a positive program for the provision, development, and guarantee of human rights and dignity in the deepest sense of that word.

To maintain our leadership in this diversified world, the quality of American life at home must command the respect and admiration of the many races and peoples which populate the globe. We must demonstrate the ability (1) to use our human and material resources effectively to provide the greatest opportunity for the fulfillment of present and future needs and aspirations, for no nation that fails to understand the need for intelligent planning in the modern world may expect to be a leader in the modern world; (2) to respect differences in ideas, in religion, and in color for a second-class citizenry at home not only weakens our sense of national unity but is a threat to our world leadership; and (3) to enlarge in every possible way reciprocal social, economic, political, religious, and cultural contacts with other peoples.

In this interdependent world no nation can live alone. The choice is to cooperate or to perish.

Improved Schools in Arkansas

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, April 29, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Morrilton's Challenge," published in the Arkansas Gazette of April 26, 1960. The article relates to the development of a very fine model school district in Morrilton, in my State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, Apr. 26, 1960]

MORRILTON'S CHALLENGE

The Morrilton school district is approaching the end of the fourth—and next to last—year of a curriculum enrichment program begun in 1956 by Winthrop Rockefeller, and within a few months must make the tough and important decision of whether to assume the entire financial burden of dramatically improved schools or let standards slump again.

The New York Times, discussing Morrilton's school system earlier this month, defined the big decision soon to confront voters of the district as "a test of civic pride." There is, certainly a large measure of civic pride involved, because much genuine pride has come with the knowledge that the system is a model.

But the district's voters have already substantially passed the test of civic pride. Before Mr. Rockefeller began the enrichment program, in which he already has spent more than a million dollars, Morrilton's school tax levy stood at only 26 mills. Since 1956, voters have joined in the improvement program by approving bond issues for more construction and voting a tax increase to 38 mills. Mr. Rockefeller's gifts have been a $750,000 elementary school and $100,000 each year for the district's operating fund.

The results have been impressive. In the year before enrichment began only one of the system's 12 grades achieved the national level in reading. Only one grade equaled the national level in arithmetic. By the end of the 1958–59 year 11 grades had reached the national level in reading and all 12 in arithmetic. Some additional teachers were hired, but the higher standards have been achieved largely with the same instructors, many of whom now attend seminars and summer courses in technique improvement.

Failure of the district's voters to raise the tax again next year—to an estimated 50 mills—would mean a drastic cutback in personnel and the elimination of such so-called enrichment "extras" as art instruction, industrial arts, adult and special education and the loss of the school psychologist.

Mr. Rockefeller's generous program stemmed from his desire to make Morrilton a pattern for the rest of Arkansas—an example for other districts to follow in their struggle to improve public education. That many benefits are already in will be attested to, we are sure, by graduates of the enriched system, once they begin to compete with other young people in their freshmen year in college.

But the incalculable benefits would come if Morrilton's voters, when the time came, could somehow tighten their belts further to meet the price demanded by high education standards today. Our guess is that the district's benefactor, himself, doesn't know whether it can be done. What he surely knows is that in no other investment could the potential return so clearly justify the risk.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.
